## ARE YOUR TREES STORM READY?

### PREVENTATIVE PRUNING

- Thin Out by 20%: Allows better wind passage and sunlight penetration.
- Remove Large Dead Limbs: Decreases the risk of falling branches.
- Properly Elevate Trees: Keep branches at least 5-7 feet away from the roof, 12-14 feet above the street, and 8-10 feet above the yard.

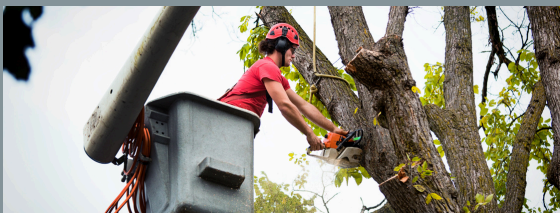

### PROPER WATERING

- Trees with well-hydrated roots and limbs are more flexible and less likely to break compared to dehydrated ones.

## HURRICANE SEASON IS UPON US

Hurricane season has officially arrived, and now is the time to prepare your trees before the storms roll in. Strong winds and heavy rains can turn weak, overgrown, or damaged branches into dangerous projectiles—putting your home, family, and property at risk. What can you do?

WHILE IT'S IMPOSSIBLE TO HURRICANE-PROOF TREES COMPLETELY, THESE MEASURES CAN REDUCE THE LIKELIHOOD OF STORM DAMAGE.

A professional tree pruning can help:

- ✓ Reduce storm damage risk
- ✓ Strengthen your tree's structure
- ✓ Keep your property safe

Our certified arborist knows exactly how to prepare your trees for the unpredictable Texas weather. Let us help protect your property and give you peace of mind before the next storm rolls through.
