

THE WOODLANDS TREE EXPERTS

September Newsletter 2025

Fall Prep = Spring Success

As the seasons shift, now is the ideal time to prune your trees. Proper pruning in early fall sets them up for strong growth next spring and helps ensure they remain healthy and resilient through next summer's heat.

Fall is for Fertilization

- ✓ Deep Root Fertilization - Helps trees recover from summer stress and prepare for winter.
- ✓ Winter Pest Control - Protects against insects that thrive in cooler months.
- ✓ MicroLife Application - An organic way to enrich your lawn, beds, and trees, ensuring balanced nutrition throughout your property.

Tree Health Concerns in Our Urban Forest

We are still seeing significant pine losses in the area due to beetle infestations. In addition, Laurel Wilt has become increasingly visible in Red Bay trees. This serious vascular disease spreads quickly and can devastate thousands of trees if left untreated.
