

LEARN TECHNICAL ANALYSIS

Hello visitor, I am in my 9th year of study in the share market. I have studied from respected and knowledgeable teachers of capital markets. In addition to direct investing I have done investing in Mutual Funds. I have incurred initial profits and then losses triple the amount of initial profits. But after studying the market from teachers and reading books focused on investing I have understood that there is no alternative to continuous learning in the capital market. Market is a humbling machine hence, keep learning. Since I am from a non – commerce background my approach is to understand the market through Technical Analysis. Technical Analysis follows fundamental analysis in most cases as Technical Analysis is trend following in nature and trend is made by institutions that work on fundamentals. If you wish to become a student of Technical Analysis then please participate in 16 weeks of learning Technical Analysis. This will have 6 live discussions in 4 weeks on market on weekends and then followed by 12 weeks learning of worksheets consisting of charts and reading material.

I am not SEBI – Registered Research Analyst therefore, I will not be discussing live charts we will be learning via case studies i.e. charts which are at least 3 years old. I am an AMFI registered Mutual Fund Distributor. You can invest via SHRIJI INVEST.

Please do not invest in the market without learning [participating in at least one bear and bull market] or without guidance from registered experts. Earning Money is difficult but successful investing is even tougher. It is good to be self-reliant in investing but only after learning. Learning can be from one's experience [unlimited losses (This is what I did.)] or from learning from those who have worked in the market with calculated losses (This is what I am doing currently.).
