Breast Cancer Awareness

Breast Cancer remains one of the most common cancers affecting women worldwide. With 1 in 8 women diagnosed with breast cancer in their lifetime, raising awareness about the disease is crucial.

- Early detection through regular screening, such as mammograms, can significantly increase the chances of successful treatment.
- Women aged 40 and above are encouraged to have annual mammograms.
- Knowing your family history and discussing it with your doctor can also help in creating a personalized screening plan for you.

Please access the following sites for information regarding risk factors, screening, early detection, treatment and more.
