HEIGHT (E.G., 6'1")

WEIGHT (LBS)

PHASE I: UPPER BODY ARCHITECTURE

1. Chest Circumference

Pass the tape beneath the armpits, level across the shoulder blades. Encircle the absolute fullest zone of the chest. Maintain natural respiration; do not puff out.

IN

2. Shoulder Span

Rest arms naturally at sides with squared shoulders. Measure horizontally across the upper back curve from the outer edge of left shoulder bone apex straight to the right.

IN

3. Precision Sleeve Length

Anchor tape at the uppermost structural shoulder seam edge. Guide down the natural exterior path of the arm over the elbow, terminating precisely at the wrist bone baseline.

IN

4. Jacket Architecture Length

Locate the prominent base center point of back neck collar. Extend tape vertically down the spine alignment path. Conclude where torso ends, parallel with thumb knuckle.

IN

5. Collar Circumference

Stand erect with chin parallel to the flooring. Encircle the neck base directly beneath the Adam's apple line. Insert one finger flat behind the tape for safe clearance.

IN

6. Athletic Arm Profile (Bicep)

Let the arm hang freely in an un-flexed, completely relaxed state. Measure horizontally around the absolute widest peak point of the bicep muscle curve.

IN

PHASE II: LOWER BODY ARCHITECTURE

1. Formal Waistline

Stand completely erect, avoiding abdominal contraction. Encircle your natural waistband zone, situated immediately above the crest of the hip bones.

IN

2. Internal Inseam Drop

Utilize a well-fitted formal trouser base line layout. Track from the high interior crotch point down the inside seam straight down to where shoe heel meets upper sole.

IN

3. External Outseam Drop

Maintain normal straight vertical posture. Trace outer paths from the upper lip edge of your traditional waistband line straight down the side leg profile directly to the floor.

IN

4. Seat Profile (Hips)

Position your heels tightly and firmly together. Encircle the absolute widest horizontal span across your lower hips and full gluteal muscle curves.

IN

5. Upper Thigh Profile

Distribute your physical weight evenly onto both legs. Encircle the widest region of the upper thigh, situated just beneath the primary crotch junction line.

IN

6. Silhouette Fit Profile

Select your preferred profile alignment cut:

Skinny Fit

Slender Fit

Modern Fit

Classic Fit

Athletic Fit

PHASE III: FABRIC COLOR REGISTRY SELECTION

Check preferred cloth options and specify desired custom order quantities:

PHASE IV: STATURE & DRAPE VISUALIZATION PHOTO

MANDATORY DRAPE MAPPING PHOTOGRAPH REQUIREMENT

To ensure pattern drapery accounts perfectly for shoulder drop and skeletal stance posture, a natural full-length photograph is highly requested alongside this numerical registry specification sheet.

Instructions for Uploading via Your GoDaddy Website:

1. Open any PDF viewer or browser tab and input your parameters directly into this document.
2. Save the document onto your desktop or local device files space (File > Save).
3. Go to tsexecutiveapparel.com and navigate to your secure 'Contact Us' segment terminal.
4. Input your master name, then look for the native file attachment module placeholder.
5. Attach this completed PDF along with your posture file image, and tap 'Submit Form'.

PHASE V: SPECIAL EXECUTIVE REQUESTS & TAILORING NOTES

Specify any unique postural anomalies, lining preferences, or functional pocket needs:
