

Process for Cabinet Construction and Installation

- Professional design unique to you and your project.
- Consideration of Cabinet Style, Function, Life Style and Ergonomics in all of our designs.
- Over 45 years of experience in all elements of cabinet design and production.
- Cabinets Custom Made to fit your measurements. We do not use standard cabinet sizes and add fillers to fit cabinets to your walls. Or modify production cabinets and call them custom.
- All Cabinets are constructed with 3/4" Finished Maple Plywood screwed together at the joints.
- We use only **Water Bourne Finish** products. These have no VOC's. They provide a safer environment for your home and a safer workplace for our employees. Very few companies do this.
- A Quality Finish that is the finest in the industry. We do our own finishes in our shop.
- Plywood shelves with real wood edges.
- Plywood Toe Kicks that are separate from the cabinet box, so moisture is never transferred into the cabinet box construction.
- Solid Wood Face Frames Screwed together at all joints.
- Solid Wood Maple Nailers are a part of our Upper Cabinet construction used to secure them to the wall.
- Wood Dovetailed Drawer Boxes and Pullout Shelves.
- Blum Under Mount Full Extension 100lb Soft Close Drawer Guides included on all of our Drawers and Pullout Shelves. Blum is the leader in the Drawer Guide Industry.
- Blum 110-degree Soft Close Hinges with six-way adjustments are included on all of our doors.
- Solid Wood Framed Doors and Drawer Fronts in over a hundred popular styles and any wood species. Painted Doors and Face Frames are made of Maple not Alder or Poplar as many companies do.
- Installation of our own cabinets. We do not sub out installation to another company.
- Door paneled ends on all of our unobstructed finished cabinet sides.
- Scribed 3/4" thick wood flush with the doors at the wall ends. Not 1/4" scribe molding like almost all other cabinet companies do. This gives us a clean and professional look.
- Crown and Wall Moldings that are scribed and caulked to ceilings and walls so there are no gaps. Very few companies do this.
- All screws used in installing the upper and tall cabinets are capped to match the cabinet interior. Only the best cabinet companies do this.
- A scheduled final touch-up after the flooring and counter tops are installed to assure that everything is completed.
