

Your tandoor comes with a 3 RING cast iron burner with valves & pilot partially pre – assembled. (We don't pre-connect the burner to the tandoor to ensure no damages during shipping)

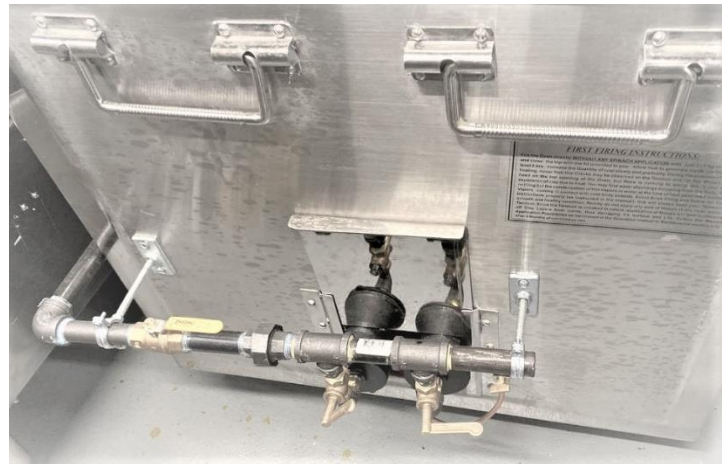

Part of the burner must be inserted from the mouth of the tandoor and the other part has to be inserted thru the opening on the side of the tandoor. See image below. Figure 1A

It is recommended to use clamps to secure the burner to the body as shown in image 1B (Clamps not included)

Figure 1A

Figure 1B

Once the entire burner is connected- you can attach a flexi-hose to the burner manifold (Outer attachments that holds the valves) and the main gas line.

Place the Burner Plate (comes with the Tandoor Purchase) on top of the burner

Check all connections properly and you are ready to Fire Up the Tandoor .
