CRS OIL & GAS REMOTE SENSING – used to pick locations in a NEW AREA
4 wells - EXCEPTIONALLY GOOD drilling results!

Copeland Remote Sensing, LLC's *unique and proprietary oil and gas remote sensing technology* **has proved out again.** Copeland was retained to use its remote sensing technology on a lease. Following Hydrocarbon Surveys data acquisition, it was processed, mapped, and Copeland recommended the first 4 drill sites. As of July 2018, **all four wells have been drilled and ALL HAVE SIGNIFICANT OIL SHOWS.** The third well even had a minor blowout while drilling and all flowed up 5.5 inch casing without a frac or with a very small frac. Some of the drillers and service personal with decades of experience said they **HAD NEVER SEEN ANYTHING LIKE THIS** in the area!

The Copeland group has been involved in remote sensing technology research and evaluation for over 30 years. **Hydrocarbon Surveys** is an *oil and gas remote sensing technology* developed by Copeland over the past 11 years.
