Positive numbers indicate a relative hydrocarbon density below a given point.  
 Negative numbers indicate relative faulting below a given point of measurement.

# R. W. CARTER 4BH - Direction of lateral REVERSED AFTER HYDROCARBON SURVEYS

**Vertical Value View**  
 Vertical Emphasized & Map Is Rotated & Tilted  
 For Presentation Purposes

**HYDROCARBON PREDOMINANT Reading**

HYDROCARBON PREDOMINANT

**Hydrocarbon Surveys Field Example: The direction of the horizontal lateral was change to encounter a HS HIGH READING AREA. The well only has 200 feet in zone. Lease production was 75,116 BARRELS OIL IN THE FIRST 19 MONTHS and was still producing approximately 91 barrels per day.**
