## Laser Hair Removal

The newest innovation in laser hair removal for all skin types

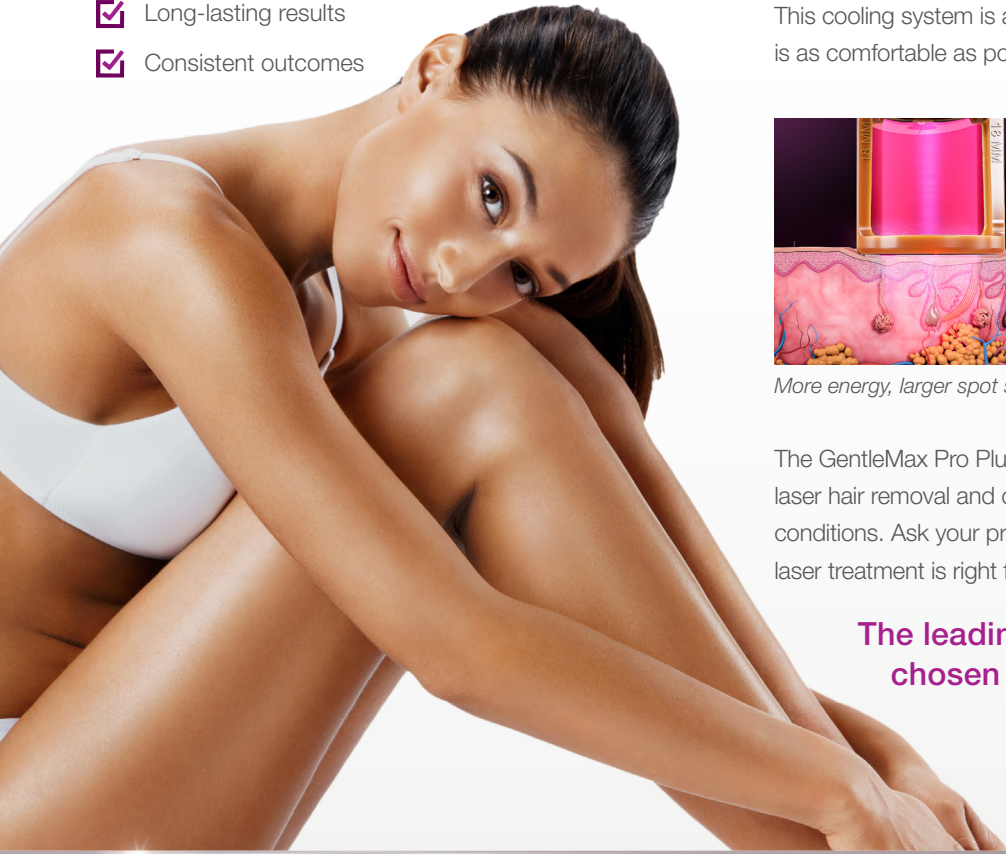

GentleMax Pro Plus®

# Enhanced laser hair removal

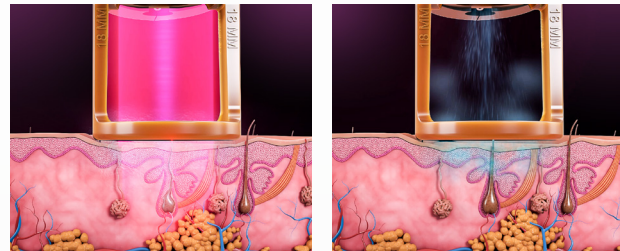

**The GentleMax Pro Plus® laser system builds on the gold standard in hair removal, and makes it even better.**

- ✔ More energy and larger spot sizes for faster, more focused treatments
- ✔ Improved results on fine hair
- ✔ DCD™ cooling system to protect the skin and provide comfortable treatments
- ✔ Suitable to treat all skin types
- ✔ Long-lasting results
- ✔ Consistent outcomes

# 20+ years of patient satisfaction and counting

Don't let the name fool you. The GentleMax Pro Plus laser is a powerful, state-of-the-art device that delivers permanent hair reduction quickly and efficiently. The GentleMax Pro Plus laser builds on the legacy of the Gentle family of laser systems. It works by selectively targeting the hair follicle with targeted pulses of light energy for thermal destruction, but without damaging the surrounding tissue. With more energy and larger spot sizes, these new treatment capabilities deliver faster, more effective treatments. Epidermal protection is provided by the Dynamic Cooling Device™ (DCD™) cooling system, which sprays the skin before each laser pulse with liquid coolant. This cooling system is also adjustable, ensuring the procedure is as comfortable as possible for individual needs.

More energy, larger spot size

DCD Cooling System

The GentleMax Pro Plus laser is a world recognized leader in laser hair removal and can also treat a myriad of other skin conditions. Ask your provider if the GentleMax Pro Plus laser treatment is right for your needs.

**The leading hair removal brand chosen by dermatologists<sup>1</sup>**

# What you can expect

## What is a GentleMax Pro Plus™ treatment like?

- 1 The duration of each session varies from person to person, but on average they last about 20 minutes.
- 2 Because hair grows in stages, multiple treatments are required. The number and timing of these treatments will be determined by your provider.
- 3 Laser hair removal treatments are commonly described as similar to having an elastic band snapped against the skin during treatment. A topical anesthetic can be used before treatment if desired.
- 4 After the treatment, a cool compress or gel pack may be applied. If you do have any redness or swelling after treatment, this should resolve in a couple of hours. Permanent side effects are rare but should be discussed with your provider.
- 5 You will be able to resume normal activities after each session, but you may be given specific advice, such as avoiding sun or abrasive skin cleansers on treated skin for a few days.
- 6 You should always follow specific instructions from your healthcare provider.
