www.quickblades.net

The Quickblades PS series, (Poly Series Impeller) lasts longer than standard stainless-steel impellers. It is most applicable to abrasive applications such as water-based and titanium dioxide dispersions. Since the blade edges are symmetrical, the impeller can be turned over, further extending life without degradation of process performance. Its specially-formulated material is impervious to most solvents, conducts electricity to eliminate the possibility of static sparks, and is rated for continuous operation at up to 145 Deg. F.

MORE INFORMATION

QUICKBLADES QUALITY:

At Quickblades, we are committed to offering the finest quality blade for a competitive price. Quickblades are produced using state of the art, computer controlled machinery.

QUICKBLADES DELIVERY:

With our large inventory of standard blades, we can ship most orders on the same day that we receive them. We keep a detailed list of past orders so that reorders are simple and quick. Quickblades is not just a name; it is how we do business!

QUICKBLADES STANDARD SIZES AND CENTER HOLES:

Our standard blade sizes that we keep in stock are 2", 3", 4", 5", 6", 8", 10", 12", 14", 16", 18", 20", 22", 24", 26", 28", 30", 32", 34", 36". However, we can make blades of any size in just a few days after receipt of an order .

Our blades are in stock with standard center hole of .375" up to 8" diameter and .750 diameters over 8" diameter. If desired, we can add your specified center hole pattern with no extra charge.
