Navigator Outlook August 2025 OneAscent **Investing that elevates INVESTMENTS**

Navigator Outlook: August 2025

VALUATION

- Rising real yields have made bonds an attractive investment
- Price to cash flow multiples for mid-caps and international equities are attractive versus the S&P 500; even more so versus technology.
- High US stock valuations support global diversification.

SENTIMENT

- Fewer stocks making new highs suggests the rally may be vulnerable
- Investor sentiment has returned to neutral levels.
- Low volatility suggests complacency in both stock and bond markets

ECONOMY

- Weaker data and downward revisions have exposed cracks in the job market
- Al-related CapEx is booming! Projections for incremental power demand imply significant growth by 2030.
- Economic data has continued to improve in the US and globally

TECHNICAL

- Credit spreads have narrowed, reflecting lower levels of corporate distress.
- The stock market is entering a period typically associated with weak returns
- M&A activity surged in July almost matching the activity for the Americas in the first half.

Navigator Outlook: August 2025

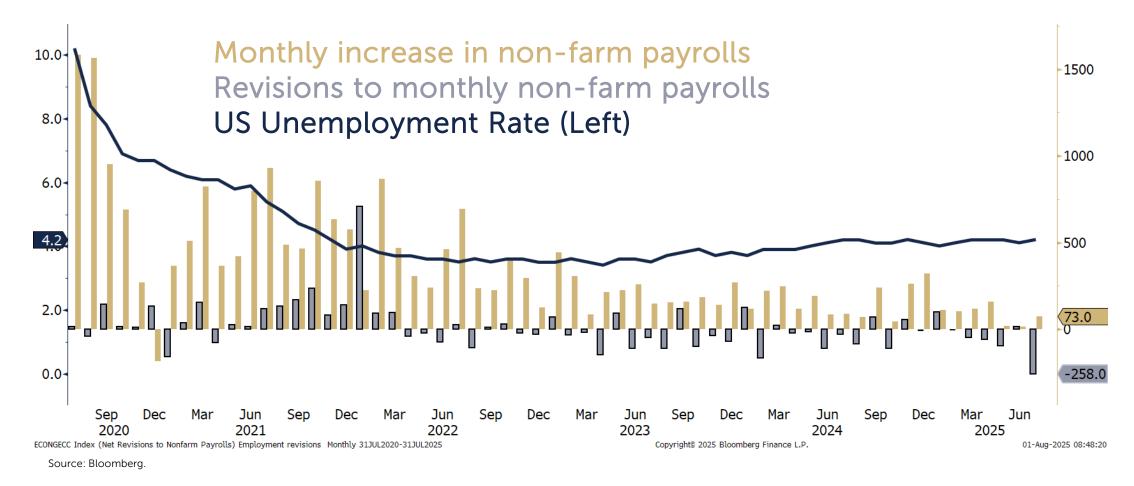

Asset Class Positioning: July 2025

	Asset Class	Positioning	Comment
	US Large Cap	Neutral	Valuations have jumped back to the high end of the range with market recovery. Risks to profitability are present as growth slows and supply chain issues from tariffs become reality.
STOCKS	US Mid and Small Cap	Neutral	Significant valuation discounts remain in place. However, technical picture remains weak, and earnings revisions have been relatively weak versus large caps.
STO	International	Positive	Relative valuation still attractive, relative strength better than US and earnings revisions are better.
	Emerging Markets	Positive	Relative valuation remains attractive, and earnings revisions have turned positive.
	Core	Positive	Bond yields remain stuck in the range of the last couple of years; Yield levels remain compelling relative to inflation and the valuation of risky assets.
NDS	Treasuries	Neutral	Treasury yields are at the lower levels of their recent range, reflecting a weakening employment situation and the tension between inflation and recession risks.
BONDS	Corporates	Neutral	The yield premium of risky narrowed yet again in July, reflecting low corporate distress.
	Mortgages	Positive	Mortgage yield spreads remain attractive relative to their credit risk, providing improved risk/reward relative to corporate bonds.

Weaker data and downward revisions have exposed cracks in the job market

Common behavior pitfalls of investing

Behavioral pitfalls	A potential antidote
Investing subjectively	In a digitally connected world, we face an endless barrage of headlines, notifications, and opinions when it comes to investments. Without proper context, the numbers and charts can create whatever narrative we want to hear. A sober assessment of data, as well as our own natural behavioral biases, can reduce subjectivity in our investment decisions.
Acting on gut feelings	Emotional decision making is an investor's worst enemy because it often contradicts sound judgement. When it comes to investing, we must vigilantly guard ourselves from motivations of fear and greed. Having a system in place that eliminates these all too common tendencies provides a better opportunity to achieve our financial goals .
Panic selling	Investor sentiment is a primary indicator of short-term market performance and it's no secret that our "feelings" towards portfolios can change daily. This behavioral aspect of investing creates opportunities for rational investors to capitalize when inefficiencies exist within the market.
Underestimating the risks	The financial world defines risk in terms of volatility, but its most common metric (standard deviation) treats upside and downside movements equally. The ultimate risk to an investor is loss of principal, and our aim as investors should be to identify and limit the downside elements of volatility when possible.
Trading impulsively	Investors with a plan and the ability to stick to it have a higher probability of achieving their goals than those who respond emotionally to the events of the day. Sticking to a plan requires a longer-term perspective and a process for executing regardless of the circumstances or market environment.

Valuations and long-term returns

Studies show that purchase valuation is an important driver of portfolio returns. High stock market valuations tend to correlate to lower forward stock returns. Another way to say this is that higher earnings yields – the inverse of the price/earnings ratio - tend to correlate to higher stock returns. Higher bond yields also correlate to higher forward returns. Another important aspect to returns is the change in valuation, or yield, over the investor horizon. In the chart on the right, 5-year forward returns starting in 2017 and 2018 are poor in part because ending yields – in 2022 and 2023, were so much higher than starting yields.

Starting valuations matter. The OneAscent investment process is anchored on this principal.

Diversification between asset classes

The chart below demonstrates how drastically different asset classes can perform over time. This volatility is due to a wide array of factors that affect market pressures. Geopolitical relations, central banking decisions, consuming patterns and intensity, supply chain logistics, social influences, earnings reports, real estate values, technological revolutions, and more play a part in how stocks and bonds rise or fall. Diversifying between multiple asset classes within equity and fixed income allocations may help prevent volatility and keep you on track in the long-run.

Annual returns and intra-year declines

Consistently predicting when stock market declines or rallies will happen, or how long they are going to last, is impossible. Over the past 43 years, the S&P 500 has experienced an average intra-year decline of 13.9% – and still finished in positive territory in 33 of those 43 years.

While no one looks forward to market volatility, intra-year declines are normal and a historical perspective on the frequency and severity of past drops can provide a valuable perspective.

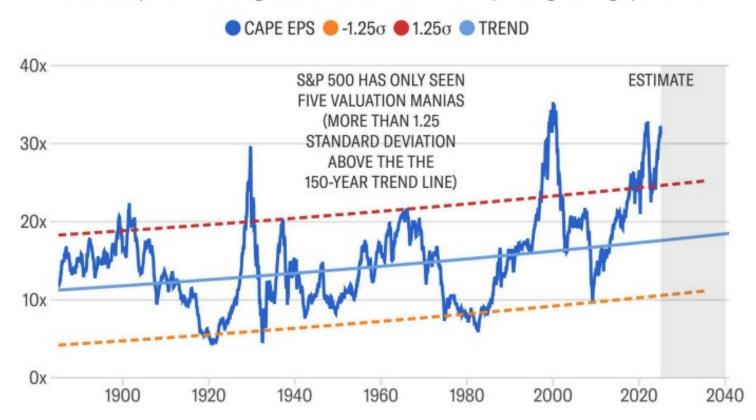

Sources: JP Morgan Asset Management, One Ascent Investment Solutions.

Returns are based on price index only and do not include dividends. Intra-year drops refer to the largest market drops from a peak to a trough during the year. For illustrative purposes only. Returns shown are calendar year returns from 1982 through 2024, over which time period the average annual return was 10.7%. Data as of 12/31/2024.

Important Disclosures

OneAscent Investment Solutions LLC ("OneAscent") was formed in March 2017, and manages a variety of equity, income and balanced asset strategies for client accounts. OneAscent is an investment adviser registered with the United States Securities and Exchange Commission. Registration as an investment adviser does not imply any certain degree of skill or training. OneAscent's Form ADV Part 2A is available on its website, www.oneascent.com, or the SEC's website, at www.adviserinfo.sec.gov, or by contacting the firm. Please consult OneAscent's Form ADV Part 2A for information regarding account minimums and fees.

This material is intended to be educational in nature, and not as a recommendation of any particular strategy, approach, product or concept for any particular client. These materials are not intended as any form of substitute for individualized investment advice. The discussion is general in nature, and therefore not intended to recommend or endorse any asset class, security, or technical aspect of any security.

Any charts, graphs, or visual aids presented herein are intended to demonstrate concepts more fully discussed by the OneAscent investment committee, and which cannot be fully explained without the assistance of an investment committee member of OneAscent Investment Solutions. Clients should not in any way interpret these visual aids as a device with which to ascertain investment decisions or an investment approach.

Performance information for the attached strategies is calculated using model performance and is based on the portfolio allocation data since inception. The strategies have not materially changed since inception. Model performance is net of any fees on the underlying mutual funds and ETFs, management fees of any underlying model portfolios, and a maximum strategist fee of 0.25% applied annually to the entire strategy. The model performance does not include any overlay fees, brokerage fees, or commissions. Performance for periods longer than a year has been annualized. Model performance means that while actual client accounts will be managed as closely to the model as possible, the performance reported is for the targeted portfolio allocations for the strategy and not a composite of actual client accounts. Accordingly, individual client performance may vary according to various factors, including fee arrangements, withdrawals, contributions, and tax considerations, among other factors. OneAscent does not control the fee amounts charged by recommending advisers. A complete listing of all trades in the model, as well as a full description of the model/strategy are available upon request.

Performance may vary when compared to the model performance presented in other materials provided by OneAscent for a number of reasons including dates of investment, deposits and withdrawals, and the specific fees paid by the client. The strategy has not materially changed since its inception. Benchmark data is derived from a blend of up to five broad based market indices and comes from Morningstar. The blended benchmarks are rebalanced back to their target weights each calendar year. The five broad market indices are MSCI ACWI ex USA, S&P 500, Russell 2500, Bloomberg Barclays US Aggregate Bond, and the Wilshire Liquid Alternative. Indices are reported to give a point of comparison only. An investor may not invest directly in an index.

The strategies are not necessarily appropriate for any particular client or investor. Accordingly, any reader of the attached description should not interpret the attached as investment advice. All investments bear a risk of loss, including the loss of principal that the investor should be prepared to bear. The use of any chart or graph in the attached is not intended to be viewed as a singular aid in determining investment strategy. Such visual aids are instead intended as a complement to other data, and like such other data, should be considered in light of consultations with professional investment tax and legal advisors. Past performance may not be indicative of future results. No current or prospective client should assume that the future performance of any specific investment, investment strategy (including investment strategies recommended by the adviser), will be equal to past performance levels. Indices are reported to give a point of comparison only. An investor may not invest directly in an index. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will either be suitable or profitable for a client's investment portfolio.
