

This is NOT A FRAISE MOWER.

This is NOT A FLAIL MOWER.

This is NOT A LASER LEVELER.

Roy Klopping invented our model PTO-60 Klopping-Hardie Sports Turf Renovator in 2002.

It was designed specifically for schools, city park departments and regional park districts. It provides them with a budget friendly quick method of repairing large or small sports turf areas quickly and cheaply as their time permits. Most fields can be used very soon after renovation. Fast forward 20 years, we continue manufacturing this same unique high-quality machine. Weight, 1100 lbs. Sturdy, durable and nearly indestructible!

Scan it! See it in action!

Factory demonstrations available.
Call us: 562-696-5780

We are the manufacturer and factory direct supplier of this machine.

\$18,995 Delivered to lower 48. Includes prepaid freight & handling, FOB your destination. Machines come totally assembled, serviced and ready for operation. Includes PTO shaft, all necessary bushings & pins to attach to either category 1 or 2 tractor with rear PTO, minimum 27 H.P. ONE-YEAR factory warranty!

Turf Renovation Machinery, Inc.
Your factory direct source for the
PTO-60 Sports Turf Renovator

- Renovate, vertically mow, dethatch, and slice aerate turf all at the same time.

NO MORE INFIELD LIPS!

- Instantly create safe, smooth, and “flat” infield/outfield transition areas on baseball fields.
- Flatten gopher & squirrel damage in just minutes.
- Minimal field down time because current turf is NOT DESTROYED. Next day use is common.

Removes thatch, vertically mows, slice aerates, and levels any high spots with its unique high speed cutting reel.

Cutting depth is adjustable from 0" to 2" with a simple ratchet mechanism. Often after renovation is complete and excess thatch is removed, the field can be used immediately. One tractor and a operator can recondition a football field in 2-3 hours.

What kind of tractor do I need?

You will need either a category 1 or 2 tractor with a rear PTO and a slow forward crawling gear with a minimum 27 horsepower at the PTO. Machines will work with as little as 20 horsepower by reducing cutting depth and using more than one pass.

Infield Lip Removal

Infield lip before Renovation

In one pass, the lip where the turf meets the infield brick dirt is removed from the grass. Just simply rake the excess away. It's amazing how quickly the lip can be removed by straddling it with the machine and cutting it right down to size. There is no more need for a sod cutter and hours of work. Remove any height lip by simply using multiple passes and raking away excess material.

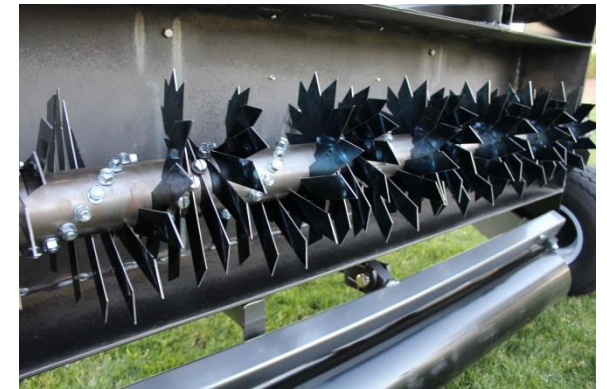

Infield Lip after Renovation

This machine will alleviate soil compaction, promote nutrient penetration and increase drainage. This is not a coring or solid tine aeration machine, so there are no cores to clean up or holes to fill after the process is complete.

The World's Finest Cut!

Ultra-high speed solid steel cutting reel. One hundred blades, 60" cutting width 5/8" blade spacing.

Features 100 solid steel blades

Many school districts, cities, colleges, and recreation and parks districts have purchased our machine as an affordable solution to eliminate tripping hazards and gopher damage instantly.

Price guaranteed until July 1, 2023
