

PUR TABS

EFFERVESCENT SANITIZING / DISINFECTION TABLETS

INFECTIOUS DISEASES ARE SERIOUS BUSINESS.

What is the probability of contracting an infectious disease?

ENORMOUS. Every public surface can potentially be contaminated with bacteria or viruses including (but not limited to) staph, hepatitis, norovirus, strep, HIV, salmonella, influenza H1N1, rhinoviruses, C. Diff spores and much more. No surface is safe, and some are worse than others.

- Desks were found to have 400X more bacteria than a toilet seat
- Tests have proved that in just a few hours, viruses can spread to 60% of a building's occupants from a single doorknob.
- Studies determined that 28% of gym surfaces tested positive for contamination
- CDC statistics showed 3 out of 4 norovirus outbreaks occur in long-term care facilities and nursing homes

Who is at risk? Everyone.

**From children to our pets to our elderly,
we are all at risk!**

Daycares and schools • athletic facilities and gyms • offices and stores • food processing • restaurants and grocery markets • trains, Planes and buses • hotels and cruise ships • shipping and boats of all types • theatres and amusement parks • hospitals, medical facilities and first responders • agriculture • animal care

Even residential homes are all known to spread infectious diseases, as well as exposure to mold and allergens.
