CYBER PROFILING

Enable a more strategic approach to implementing effective enterprise security — with the Adura Cyber Profiling service.

ENABLE THE RIGHT
# SECURITY MEASURES

Businesses with heavy IT service requirements and significant assets to protect must align their policy, business and technological approaches, to manage security risks better.

Get a clear measure of your company's security alignment and how effective it is for your cyber security controls. Our Cyber Profiling service will assess your organisation's existing security practices and appliances, and match them against industry benchmarks. Using industry recognised ISO27001, NIST Cybersecurity Framework and MAS Technology Risk Management, we'll help you to systematically identify and prioritise actions for reducing cybersecurity risks and achieving cybersecurity compliance.

ADURA CYBER SECURITY
COMPLIANCE JOURNEY

READY.
- Assess your current policies and processes using Adura's readiness assessment service.

ANALYSE.
- Find out the gaps in your cybersecurity and what is needed to close them.

COMPLY.
- Improve controls using globally recognised cybersecurity frameworks.

There's a cost to not knowing how effective your security posture is.

USD **1.745** trillion
Economic losses due to cyber security incidents in Asia Pacific*

USD **30** million
Average for a large organisation

USD **96,000**
Average for a mid-sized organisation

*Microsoft and Frost & Sullivan, Understanding the cybersecurity threat landscape in Asia Pacific: Securing the modern enterprise in a digital world

ACTIONABLE
INSIGHTS

We use globally recognised cybersecurity frameworks to provide a common language for both technical and management teams to better communicate and manage cyber security risks. An executive report is also included to present details in four key areas:

CYBER CONTROL SUMMARY

Our assessment takes into account the various ways to improve cyber controls; recommendations will be tailored to each functional group for action.

High-level recommendations will then be aligned to the specific tiers used in the Readiness Assessment for clarity and continuity.

READINESS ASSESSMENT

Weighted average taken from the compliance scoring, based on 5 key cyber security domains of **IDENTIFY**, **RESPOND**, **PROTECT**, **RECOVER** and **DETECT**.

Better organised information improves risk management decisions — for addressing threats and learning from previous incidents.

CYBER RISK PROFILE

Your Readiness Assessment score is matched to a 4-tier Cyber Risk Profile framework to determine the characteristics of your profile.

90% - 100% » Tier 4: Adaptive

66% - 89% » Tier 3: Repeatable

26% - 65% » Tier 2: Informed

0% - 25% » Tier 1: Partial

EXECUTIVE RECOMMENDATIONS

Recommendations are made by comparing the Current Profile with the Target Profile to prioritise a tailored action plan to address the security gaps.

This will allow you to make better informed decisions about cyber security, support risk management, and perform targeted and more cost-effective improvements.

ABOUT:

Adura Cyber Security provides cyber security consultancy to help organisations in Asia to strategise and maintain a security posture that is effective, sustainable and tailored to meet the needs of their business.
