

1.4Fr Peripherally Inserted Central Venous Catheter

The Smart Choice for
NICU Patients

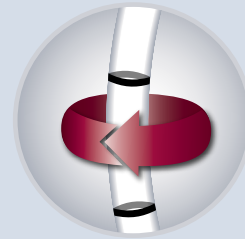

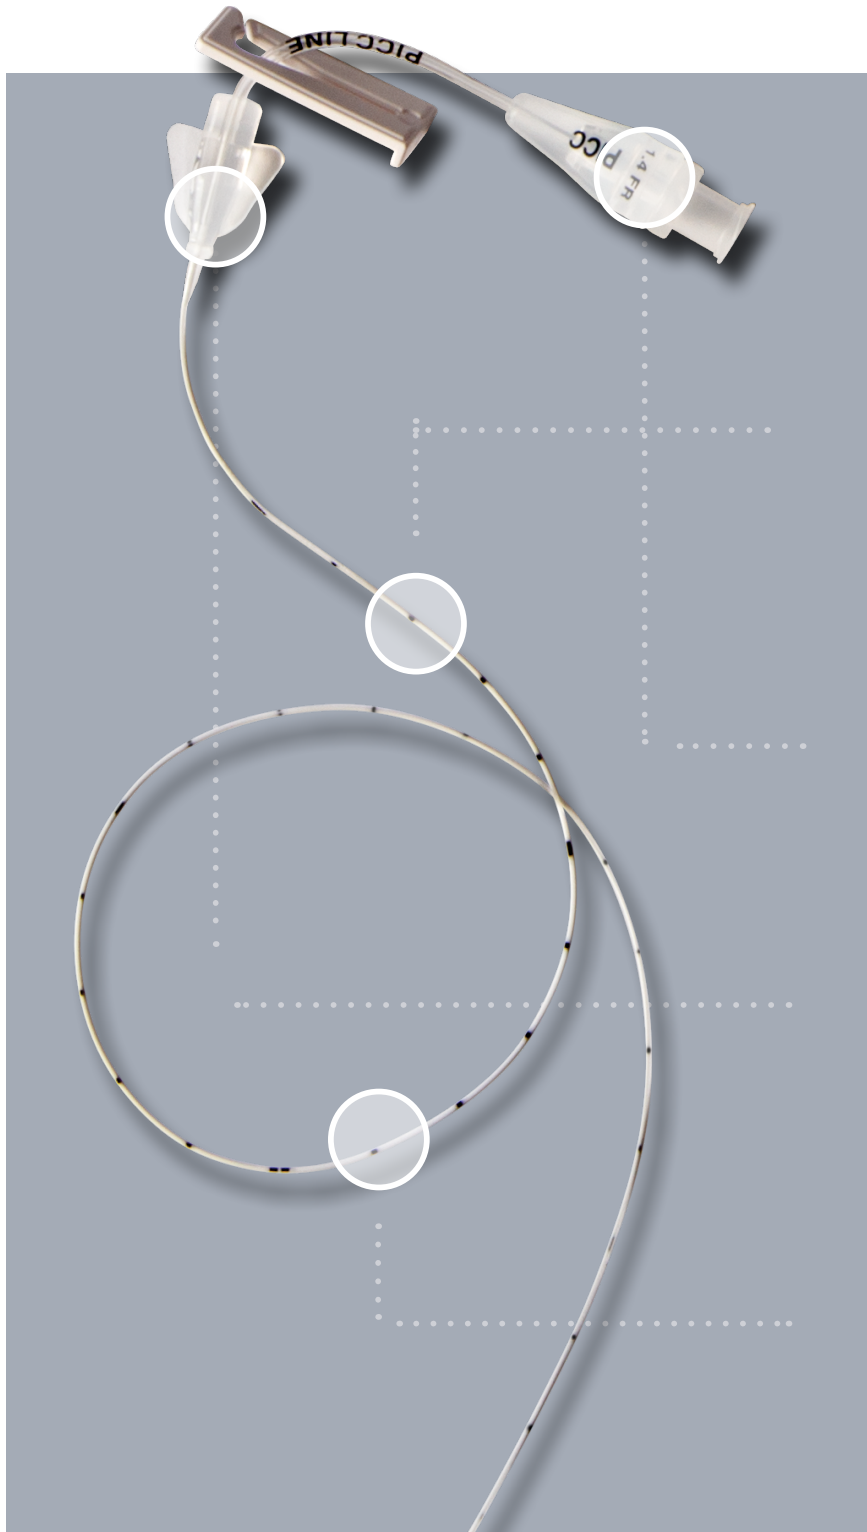

The high flow rate of the 1.4Fr
PICC maximizes it's utilization in the
majority of NICU patients and addresses
known challenges for the smallest of patients.

WHY MAKE THE CHANGE?

The 1.4Fr PICC allows you to reduce the puncture size and place a catheter that is over **25% smaller** than a 2Fr with a flow rate that can deliver all the therapy needed for the majority of the NICU patients.

360° Markings

around the catheter body provide easier visualization for accurate placement depth and tracking

Easy Identification Hub

is clearly marked with "PICC" and the French size to readily identify the catheter type and size

Soft Stabilization Platform

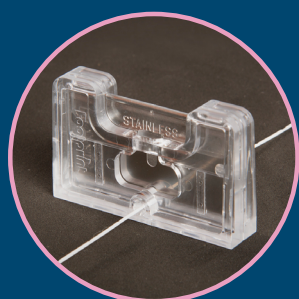

for enhanced securement and patient comfort

Indelible Markings Every Centimeter

allow the clinician to safely facilitate line placement

- Clinical advantages of placing a smaller puncture and catheter are within the recommended guidelines of NANN and INS
- Proximal hubs made of inert Polypropylene for excellent chemical resistance and mechanical stability
- Soft, pliable silicone securement platforms
- Matching 1.4Fr Sheath Introducer
- Line identification for added safety
- 360° markings aid in immediate visual tracking
- 30cm marked catheter
- Fully radiopaque easily visualized on xray

OUR COMPLETE PICC KITS OFFER THE FOLLOWING AND MORE:

Trimming Device

Our exclusive trimming device with magnified viewing window provides accurate trimming every time.

Maximum Barrier Drape

Our exclusive "Hybrid" drape that provides maximum barrier protection with visualization of the patient while preventing strike-through contamination.

Safety Products

Sharps protection designed to lock onto and secure contaminated needles.

Medication Labels

Provided in each kit to support compliance of the Joint Commission requirement for labeling medication on and off the sterile field.

PEEL-AWAY INTRODUCER SHEATH

SHEATH1.4	Peel-away Sheath Introducer Only)	1.4Fr	5/case

Footprint Medical specializes in designing & manufacturing innovative products for the smallest, most vulnerable of patients. With one manufacturing facility located in the United States, our high quality products include: Peripherally Inserted Central Catheters, Sheath Introducers, Procedural Kits, Umbilical Catheters, Enteral Feeding Catheters, Urinary Drainage Catheters and more. Combining decades of design and manufacturing experience with neonatal catheters.

- The Footprint Medical management team has more than 50 years of experience in the disposable medical device industry with primary expertise in small bore silicone & plastic catheter manufacturing.

Located in the heart of Texas, Footprint Medical, Inc. is committed to **"Helping tiny babies make their own footprints in the world..."**

**A complete line of Kits
and Accessories are available**
