

Advance Your Neonatal PICC Training

Learn more about the Continuing
PICC Education Course for our
Vascular Access customers

Venous access can be an important component of care for infants admitted to intensive care. Our Footprint Medical PICC Education Program provides didactic and hands-on training focused on catheter placement, tracking, and maintenance.

Helping tiny babies make their own Footprints in the world

Footprint
medical inc.

has joined BD

The Footprint Medical PICC Education Course is taught by a member of Footprint's Clinical Team.

- Courses are on-site/in-person
- Designed for both new and experienced PICC Team members
- Each attendee receives a course booklet
- Attendees can earn 5.5 CE credits

THERE ARE 2 MAIN SEGMENTS TO THE COURSE:

Didactic Segment

- Interactive presentation designed for active learning
- Review of NANN and other Guidelines/Recommendations, case studies, and discuss troubleshooting

Hands-on training with Footprint products

- Learn about Footprint product design and key product features
- Collaborate with peers to enhance your practice

COURSE OBJECTIVES:

At the completion of this offering, the class participant will be able to:

- Describe the differences between venous catheters used in neonates
- Identify the clinical indications for PICC placement
- Describe the structures and venous anatomy associated with PICC insertion
- Discuss potential complications associated with PICCs, their prevention and treatment strategies
- Describe appropriate PICC site care and maintenance procedures
- Describe the patient/parent education required for optimal treatment with a PICC
- Demonstrate appropriate simulated PICC insertion
