About Me

“ I take a great amount of satisfaction in working to see thoughts and ideas evolve from thumbnail sketches or wireframes into finished designs. Fully realized executions and truly successful ideas should always accomplish the goal one sets out to achieve at the beginning of the creative process.

UX/UI

Created wireframes, page designs and prototypes, designing the overall UI experience. Worked with the development team to facilitate the online experience, as well as to monitor the overall quality of the final deliverables. Ensured that marketing campaigns were integrated with the client's existing user experience.

Design

Responsible for the design and development of campaign creative from initial ideation and brainstorming meetings, into layouts and animation. Developed multifaceted campaigns that drove traffic online via social media, email marketing and display banner ads. Worked on branding, logo designs, and styleguides for final implementation.
