

What is lip blushing

Lip blushing is a semi-permanent tattoo intended to enhance the color or discoloration of lip tones. From nudes to red shades, this lip enhancement defines the shape and color creating a natural everyday look. Lip filler is not needed. Color maintenance is required to keep desired look.

How long does it last?

Results will always vary from person to person, after your initial session and the touch up, your results should last between 1-4 years. Additional touch ups may be required depending on the person and look desired. Permanent makeup ink is not the same as body art ink, and by design it does not last as long as body art ink.

What can I expect?

- There will be moderate swelling, redness and bruising for the first few days. Swelling subsides after 4 hours.
- Apply a Ziploc bag filled with water and ice for no more than 15 minutes at a time to reduce swelling.
- During the initial healing period, there should be minimal scabbing or flaking of the skin. If there is scabbing or flaking, do not pick, and allow the scab or dry skin to come off on its own. Keep your lips moisturized at all times - less scabbing the better.
- Expect the color to eventually lighten by up to 40% once the healing process is complete.
- Color may appear uneven at different stages of healing. Be patient. This is a process that does not yield immediate results.

Does lip blushing hurt?

Pain levels vary from person to person. Strong medical grade topical anesthetic cream is used before and during your procedure to keep you as pain free as possible.

How long does the procedure take?

The procedure takes about 2 hours. The consultation and prep work take a good portion of that time. I want to make sure after we have discussed your concerns and I've drawn out a shape that we are both on the same page before I start the procedure. Once we are both happy I will apply numbing cream for 20-30 mins then we will start the process.

During that time the non toxic ink can get in your mouth which doesn't taste the best, but is ingestible and non toxic.

WILL I STILL HAVE TO WEAR LIPSTICK? AND CAN OTHER COLORS STILL LOOK THE SAME ON TOP?

This is up to the look each individual is trying to achieve. The colors I tattoo with are natural and intended to look very natural. We can certainly enhance your natural color or add color if your lacking, or add a specific tint that your looking for, but it remains soft and natural. That way when you do decide to change it up and want to wear lipstick it will still look great over top, and can cover you tattoo with whatever color we decide to use.

CAN LIP BLUSHING BE DONE ON ANYONE/ EVERYONE?

No, lip blushing is not for everyone. Please read the contraindications carefully. If any of the following apply to you, this procedure is not recommended...

- You are a smoker (pigment may not retain properly, colors may distort)
- .If you have a history of MRSA
- You have psoriasis in the treatment area.
- You have an auto-immune disease.
- You have thyroid/graves disease (medication may cause pigment to not retain properly).
- You have anemia (pigment may not retain properly).
- You have a history of keloid or hypertrophic scarring.
- You are currently undergoing chemotherapy.
- You are pregnant or nursing. (You cannot have this service. No exceptions.)
- You have Diabetes type 1 or 2 (due to slow healing and infection, color may or may not retain well).
- If you are under a doctor's care and have questions at ALL about being able to have this procedure, it is your responsibility to meet with your doctor and get written approval.
- If you are prone to cold sores, please see instructions below.

****Please note: even if none of the above apply, lip blushing cannot be guaranteed. This is a cosmetic tattooing procedure, the skin can be unpredictable, it is up to your skin to retain the pigment. Generally, results are successful, however, due to skin type, healing or bleeding during procedure, some results can differ****

If you show up to your scheduled session and decide not to proceed because one or more of the above is present, your booking fee is still non-refundable. Be sure to read and research before booking.

If you are prone to cold sores, lip tattooing CAN cause outbreaks, which can result in loss of pigment. We ask that our clients take their prescribed anti-viral medication starting 48 hours prior to their appointment and after the procedure to prevent outbreak. You can still have lip blushing done! We just want to ensure you get the best results possible. Consult with your doctor for any additional questions. If you have an outbreak, or any other type of scratch/acne we ask that you reschedule your appointment as soon as possible. If you show up with any type of outbreak your appointment is considered canceled and you forfeit your deposit.
