

# Indoor Air Quality and Your Health

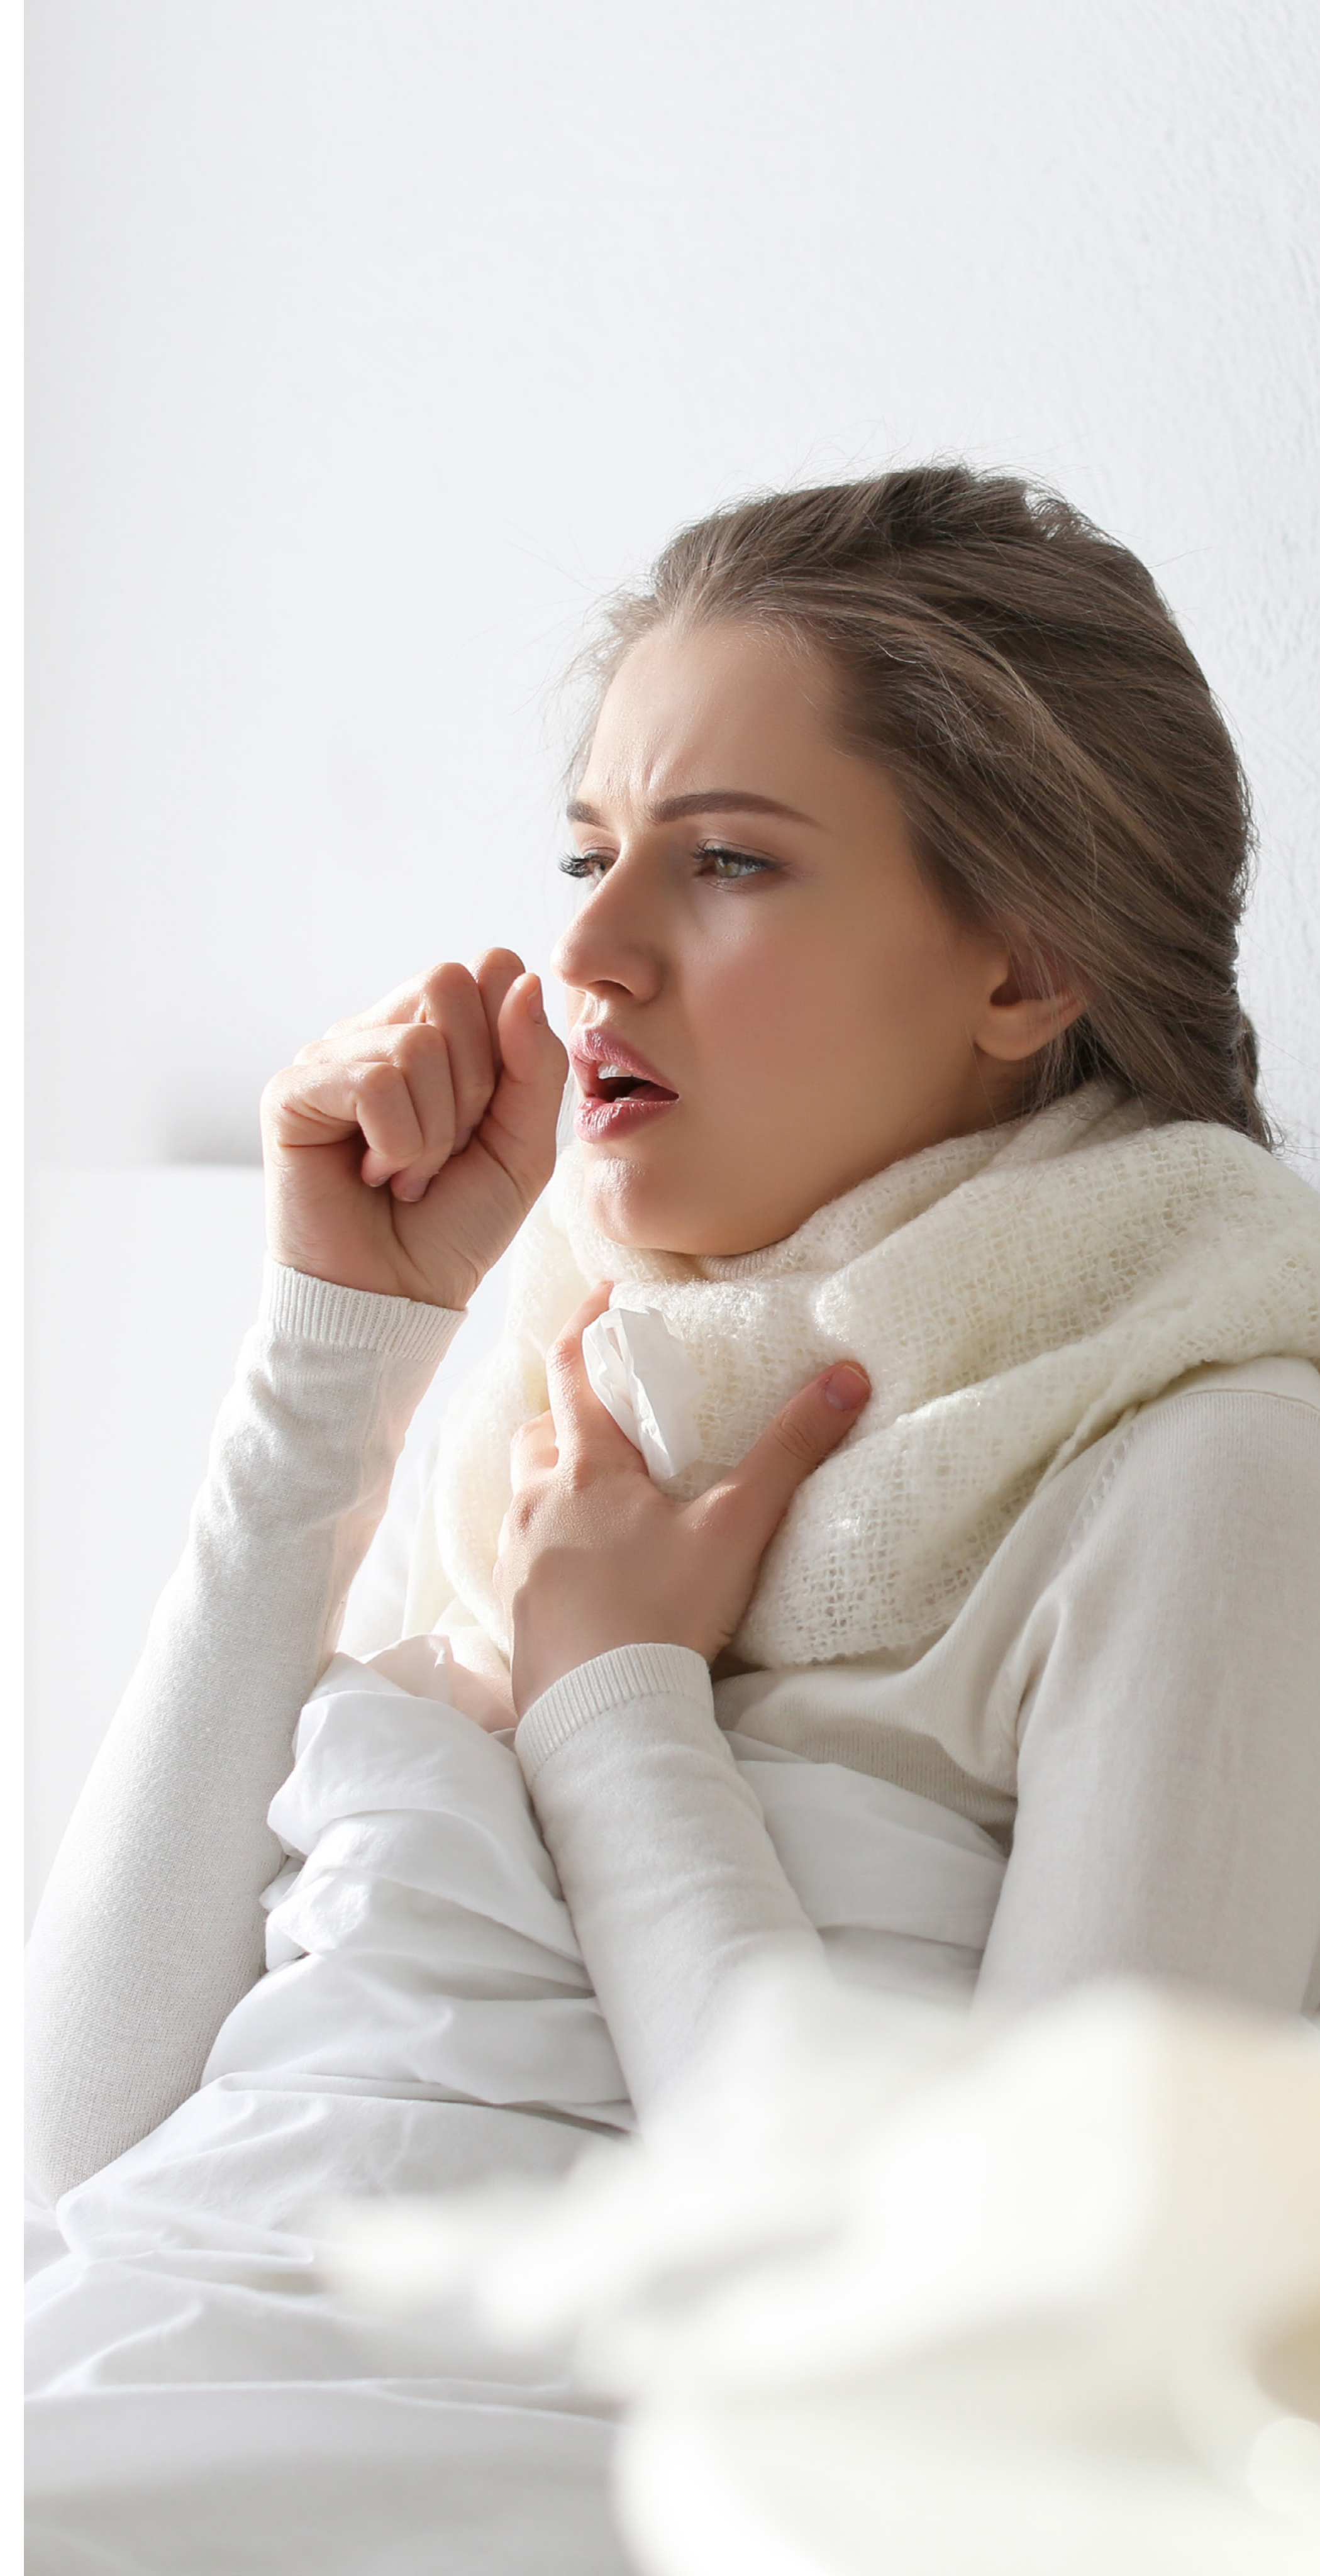

**Aprilaire**<sup>®</sup>

Trusted Solutions for a Healthy Home<sup>®</sup>

## Does your home have a dry air problem?

Dry air can make your home both uncomfortable and unhealthy. Itchy skin, static shock and worse, aggravation of respiratory conditions and transmission of viruses are all unhealthy symptoms of overly dry air.

## An Aprilaire whole-home **humidifier** can help:

- + **Control Health:** Keep humidity at healthy levels which reduces respiratory infections and the transmission of airborne cold and flu viruses.
- + **Protect Your Home:** Furniture, hardwood floors, musical instruments and electronics are all safer when your home is properly humidified.
- + **Increase Comfort and Energy Efficiency:** Stay warmer at cooler temperatures, allowing you to lower your thermostat and save energy.

Models may vary—Ask us to recommend the right solution for your home.

# Humidity levels out of control?

High humidity is a threat to comfort and health. An Aprilaire whole-home dehumidifier automatically removes the right amount of humidity from every room.

## An Aprilaire whole-home **dehumidifier** can help:

- + **Control Health:** Eliminating excess moisture can reduce dust mite growth, mold and other contaminants that trigger allergy and asthma symptoms.
- + **Maintain Comfort, Eliminate Odors:** Cold, clammy air and musty odors will be a thing of the past.
- + **Protect Your Home:** Prevent structural damage and damage to wood floors and furnishings.
- + **Improve Energy Efficiency:** Feel cooler at higher temperatures.

# What's in the air you're breathing?

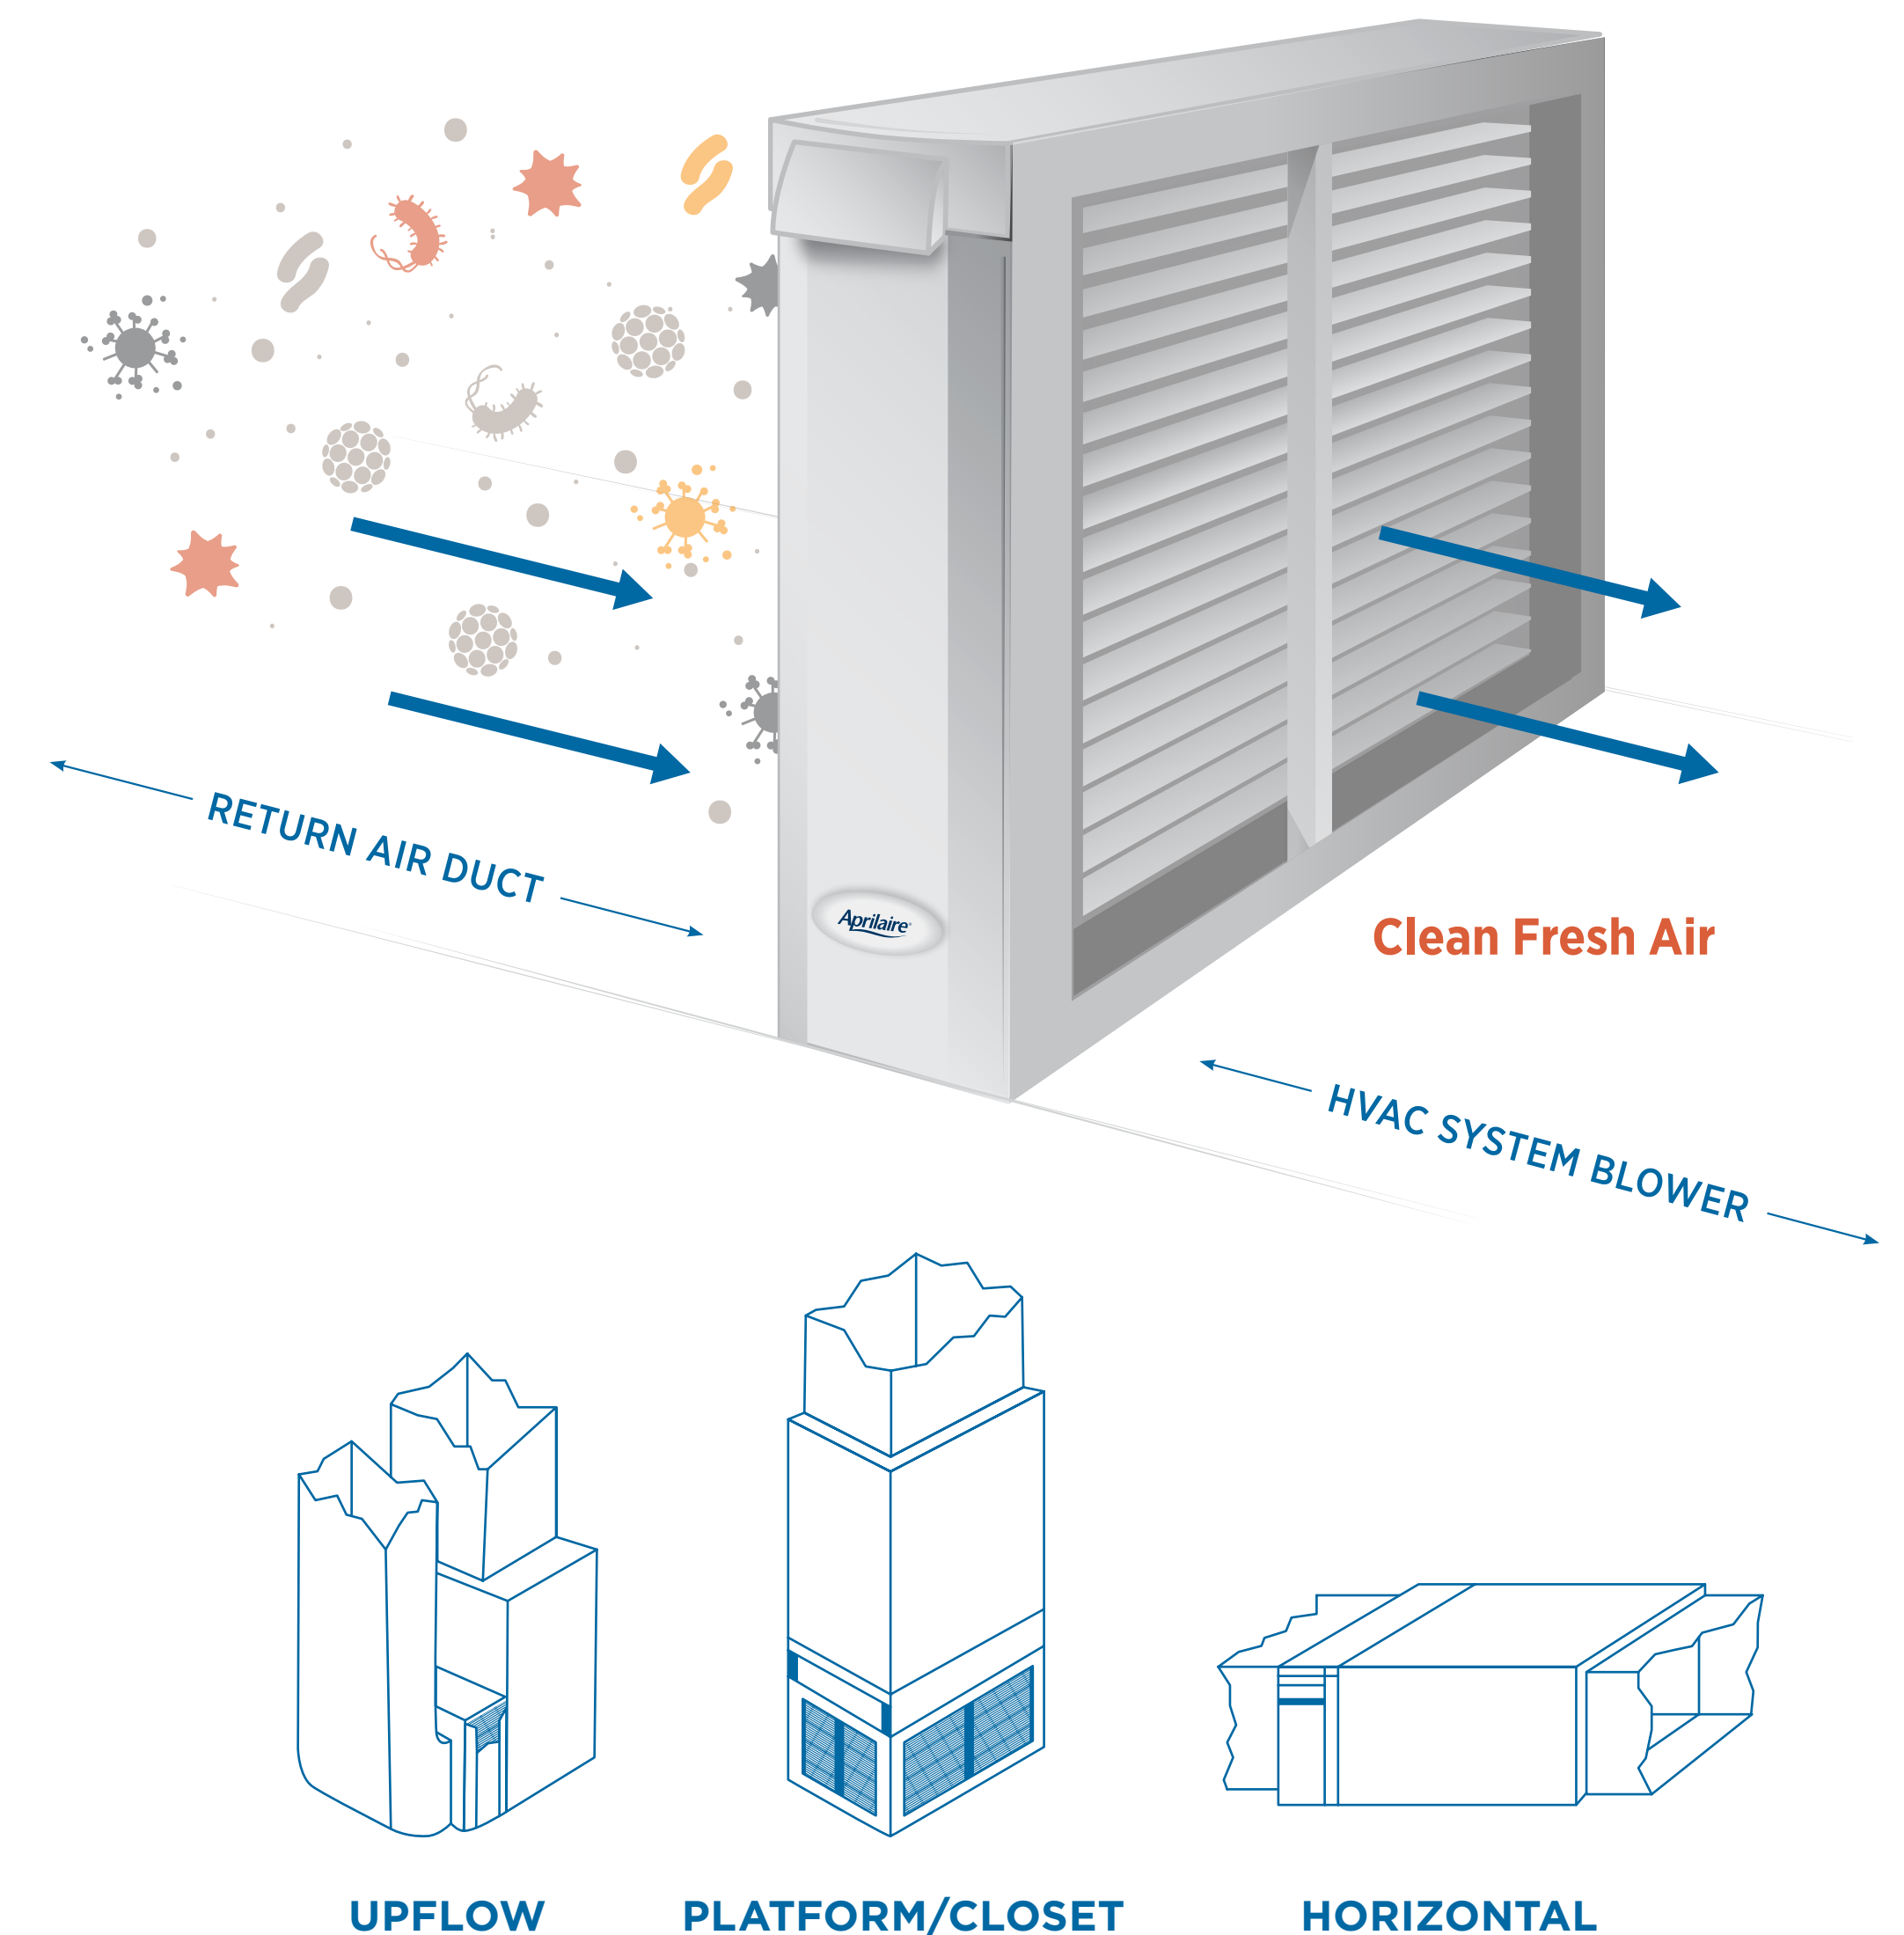

Air inside your home can be many times more polluted than the air outside.

A whole-home air purifier from Aprilaire will help you manage your family's comfort, health and protect your HVAC system.

## An Aprilaire whole-home **air purifier** can help:

- + **Control Health:** Removes particulates and irritants throughout your home. That includes mold spores, pet dander, dust mites, bacteria, pollen and even viruses.
- + **Control Dust:** Make your home look and feel cleaner, while protecting furniture and electronics.
- + **Protect Your Home:** Keep your air conditioner clean and your furnace working efficiently; saving energy, minimizing repair costs and extending service life.

Aprilaire Air Purifiers offer the same level of protection, no matter where your system is located in your home.

# A better filter for purer air.

## Standard 1" Filter

**LESS** media to filter out harmful particles

## Aprilaire Media

**MORE** media to filter out harmful particles

- + longer filter life
- + prevents dirty air from passing around the filter

# Clean Coil Guarantee

Aprilaire air purifiers are so effective at removing particulates and contaminants that are harmful to your family and your HVAC equipment, we offer you this guarantee: Should your new indoor air conditioning coil require professional cleaning in the next 10 years while properly using an Aprilaire air purifier, we will pay \$100 towards the cost of having the indoor coil cleaned by a licensed contractor.

## How fresh is the air in your home?

Excess moisture, chemical fumes and odor-laden indoor air can have a negative effect on the health and comfort of your family. An Aprilaire whole-home ventilation system expels stale, stagnant air and replaces it with fresh, clean air throughout your entire home.

## An Aprilaire whole-home **ventilation system** can help:

- + **Control Health:** Keep your family healthy by reducing indoor air pollution and dangerous concentrations of VOCs (volatile organic compounds).
- + **Control Comfort:** A whole-home ventilation system removes air that's uncomfortably humid and helps you exchange odors with fresh outdoor air.
- + **Protect Your Home:** Excess humidity is a breeding ground for mold and mildew. It also causes condensation on windows, often destroying their finishes and structural integrity. A whole-home ventilation system helps minimize excess humidity.
- + **Save Energy:** With controlled whole-home ventilation, air that's too hot or too cold never enters the home, which keeps your air conditioner or furnace from operating more than it needs to.
