

Reflective Sheeting to Meet Your Needs

3M offers a full line of durable reflective sheeting for use on all types of traffic signs.

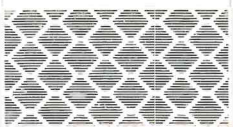

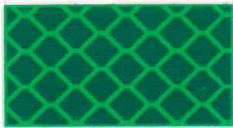

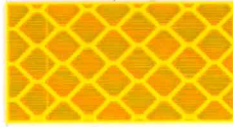

3M™ Diamond Grade™ DG³ Reflective Sheeting Series 4000 incorporates “full cube” technology for optimal performance. DG³ Sheeting is designed to have the highest retrorreflective characteristics at all sight distances including both short and medium road distances. DG³ Sheeting is available in fluorescent colors which provide excellent visibility at dawn and dusk, as well as in inclement weather.

3M™ High Intensity Prismatic Reflective Sheeting Series 3930 is designed for durable traffic control signs, work zone signs and delineators. Vivid colors provide 24-hour performance with increased daytime and improved nighttime visibility.

3M™ Engineer Grade Prismatic Reflective Sheeting Series 3430 provides better daytime and nighttime brightness than beaded engineer grade sheeting. Engineer Grade Prismatic sheeting is designed for use on commercial and non-critical traffic signing.

3M™ ElectroCut™ Film Series 1170 is used to produce short-run, custom or variable message traffic signs. It is designed to help save time and money on inventory.

3M's prismatic sheeting is better for the environment. The manufacturing process for prismatic sheeting reduces VOC emissions by 97% and energy consumption by 72% compared to standard engineer grade sheeting processes.

| 3M™ Diamond Grade™ DG ³ Reflective Sheeting | |
