

The law of change

One of the most often talked about subject by all of us is **change**. It is said that change is the law of nature. There is nothing in this world which does not change. Sometimes so it is said that time is also nothing but a process of change. Science, as well as all religions since time immemorial accepts the views on change. Fortunately for us this law of nature also follows some fundamental rules or laws. It is we the people who always forget these laws to suit our needs and greed.

Since the beginning of the universe the speed of light remains constant. At one point of time or history of mankind, people calculated that the speed of light is 186000 miles per second or 300000 kilometer per second. The speed of light is same today. It hardly matters for the speed of light whether people know the speed of light as 186000 miles or 300000km per second. The laws of motion were same when it was formulated by Newton or during Stone Age and it is the same today. The sun sill rises in the east, the earth still moves round the sun. The weight of proton, neutron and electron remains same as it was before human being came to this earth. So, the fact is that though change is the law of nature, there are some fundamental things which never change. If these fundamental things also start to change there will be no existence of this present world. Unfortunately it is the man forced changes, which are creating havoc in today's world and creating danger for our future generation. It is we people who forced depletion of ozone layer, it is we people who has destroyed the forests, it is we the people who has destroyed ecological balance. Pollution and global warming is our own creation. We should not blame the law of change for our misdeeds and wash our hands. The fundamental thing in the nature never changes and always tries to achieve optimum. It is the greed of man, which deforms the natural process of change.

It is not that the fundamental law of change is applicable only to physical science and the physical and material world. It is equally applicable to social world. We often say that values have changed; honesty, truthfulness, morality, ethics, and love everything has changed. But thing is that none of these fundamental things has changed, only our perception of mind has changed, our yardstick has changed. Because the law of change is **that fundamental thing never changes and change is always for better**. Nasto vidyata bhavo nabhabo vidyate satah ubhayorapi drstontastvanayo stattvadarsibhih(Srimad Bhagavad Gita).
