

CLIMATE & SUSTAINABILITY

Based on the:
CFA Program Questions

Climate Resiliency

- Will the proposed project mitigate future physical climate risk?
 - Sea-level rise, storm surges and/or flooding
 - Base on available data predicting future extreme weather events, include hazard risk analysis data.
- Does your project incorporate environmental justice practices?
- Will the proposed project protect, preserve and enhance the State's resources?
 - Agricultural land, forests, surface and groundwater, air quality, recreation & open space, scenic areas, and historic & archeological sites.

Greenhouse Gas Reduction

- Will the project promote sustainability by strengthening existing/creating new communities to reduce greenhouse gas emissions?
- Will the project provide improve public transportation to reduced automobile dependency?
