1.0 INTRODUCTION

This report presents the results of the Phase II Environmental Site Assessment (ESA) completed by HRP Associates, Inc. (HRP) in August through October of 2024 at the Remington Arms Facility located on multiple parcels along Hoefler Avenue, East Main Street, Commerce Street, and Highland Avenue in Ilion, New York (referred to herein as the "Site") (**Figure 1**). The investigation assessed potential environmental impacts associated with the current and historic use of the Site as an industrial facility which manufactured firearms, ammunition, agricultural equipment, bicycles, steam cars, typewriters, sewing machines, and cash registers since the early 1800s. The Phase II ESA was completed for the Herkimer County Industrial Development Agency (HCIDA) under a United States Environmental Protection Agency (EPA) Brownfields Assessment Grant (BF 96240822), in accordance with the Site-Specific Quality Assurance Project Plan (QAPP) dated June 10, 2024, and approved by the EPA on July 24, 2024.

1.1 Report Organization

The text of this report is divided into six sections. Immediately following the text are the figures, tables, and appendices. **Sections 3** and **4** describe field activities and findings exclusively from the Phase II ESA. A summary of each report section is provided below:

Section 1.0 Introduction: Report organization followed by Site description, summary of previous environmental investigations and records, and descriptions of areas of concern and contaminants of concern which were identified during the preparation of the Site-Specific QAPP and were investigated during the Phase II ESA.

Section 2.0 Physical Characteristics of the Site: Includes a summary of records review and field observations to describe physical characteristics, including Site topography, soils, geology, and hydrogeology.

Section 3.0 Field Activities: Summarizes field activities associated with the Phase II ESA including geophysical, soil, and groundwater investigations.

Section 4.0 Findings: Presents the findings of the geophysical survey, field observations, and analytical results of soil and groundwater sampling performed for the Phase II ESA.

Section 5.0 Conclusions: Presents conclusions related to the nature and extent of impacts to Site soil and groundwater.

Section 6.0 References: Provides a list of references used throughout this report.

1.2 Site Description

The former Remington Arms Facility is located across multiple parcels as described herein: 14 Hoefler Avenue (Parcels A, B, and C), East Main Street (Parcels D and E), Highland Avenue (Parcel F), and Commerce Street (Parcel G) in Ilion, New York. The Site consists of seven parcels identified by the County Tax records as parcel ID#s: 120.37-5-16 (Parcel A), 120.37-5-9 (Parcel B), 120.37-5-8 (Parcel C), 120.37-4-1 (Parcel D), 120.37-4-77 (Parcel E), 120.45-1-20.1 (Parcel F) and 119.36-1-

13.3 (Parcel G). Improvements to the Site include 44 industrial buildings with one to four stories totaling approximately 980,000 square feet on Parcels A and B and an approximately 100 square foot building on Parcel G. For the purposes of this investigation, the Site encompasses all seven parcels. The Site location is depicted in **Figure 1**.

The 38-acre Site was originally developed in the early 1800s as an armory and historically been used for industrial purposes, including manufacturing of firearms, ammunition, agricultural equipment, bicycles, steam cars, typewriters, sewing machines, and cash registers. Phase I Environmental Site Assessments (ESA) conducted in March and April of 2024 have identified multiple recognized environmental conditions (RECs) with the potential to have impacted soil or groundwater quality at the Site. This has led to the identification of 10 Areas of Concern (AOCs) (discussed in detail in **Section 1.4**), based on observations and data obtained from the Phase I ESA.

The Site is in a mixed residential, commercial and industrial use area. Multiple residential properties adjoin the Site to the northeast and south/southeast; and multiple commercial properties adjoin the Site to the north and west.

1.3 Previous Environmental Investigations and Records

The findings of the previous investigations performed at the Site are summarized below.

RCRA/NYSDEC Sitewide Investigation and Groundwater Monitoring Program

The Site is identified on the Environmental Site Remediation Database under the RCRA program as a Class C (Completed) site. A 1995 RCRA investigation of releases of hazardous waste constituents found low levels of VOCs in groundwater. Sitewide groundwater monitoring was discontinued in 2002 after levels had attenuated to slightly above groundwater standards. This applied to multiple AOC areas of the property.

Phase I Environmental Site Assessment, Remington Arms Plant (Parcels A, B, and C)
Prepared by HRP Associates, Inc. – April 2, 2024

This assessment has revealed the following RECs in connection with the Site:

The 200-year history of manufacturing operations is considered a REC in connection with the Site. Numerous current and historical areas of concern including various manufacturing operations, trench drains and dry sumps, oil/water separators, petroleum and chemical storage, coal storage, electrical transformers, gun powder houses, a railroad spur, and historic fill materials were identified which had the potential to have impacted the Site with Volatile Organic Compounds (VOCs), Semi Volatile Organic Compounds (SVOCs), metals, and Polychlorinated biphenyls (PCBs). Although a sitewide groundwater investigation was initiated in 1991 and completed in 2005, no recent groundwater sampling or soil characterization specific to on-site AOCs has been conducted.

Mr. Steven Taylor, site contact, Remington Arms identified the location of a water main break in the vicinity of Building 56 where cyanide was reportedly detected above state standards in soil. Soil analytical data was not provided, and it is unknown if the contamination was delineated or excavated.

Phase I Environmental Site Assessment, E. Main Street Parcels (Parcels D and E)
Prepared by HRP Associates, Inc. – April 11, 2024

This assessment has revealed the following REC in connection with the Site:

Portions of the Site have been formerly utilized as gasoline fueling stations. A spill (#9506245) occurred on July 21, 1995, when petroleum by-products were found during an on-site/off-site groundwater investigation completed by Remington Arms. Low-level petroleum constituents that may remain in soil and groundwater at the Site in the vicinity of the former fueling stations is considered an REC, however, the area has been extensively investigated and there is no current obligation for continued investigation at this time. If the future property use changes, it is possible that additional remedial measures may be required.

Phase I Environmental Site Assessment, Highland Avenue Parcel (Parcel F)
Prepared by HRP Associates, Inc. – March 22, 2024

This assessment has revealed the following REC in connection with the Site:

A few small polyethylene-covered soil piles are present on-site. The Site contact stated that soil piles were stockpiled on-site from a previous soil cleanup near Remington Arms Buildings 44 and 48 (off-site). The Site contact stated that soil was previously characterized for off-site disposal, however, waste characterization data was not available for HRP's review. Specific contaminants associated with the previous soil cleanup are unknown. The presence of soil from a previous environmental cleanup(s) with no documentation regarding waste characteristics is considered a REC to the Site.

Phase I Environmental Site Assessment, Commerce Avenue Parcel (Parcel G)
Prepared by HRP Associates, Inc. – March 28, 2024

This assessment has revealed the following RECs in connection with the Site:

The Site was developed with two rail spurs from prior to 1925 until approximately 1989. Rail spurs are associated with the use of petroleum products, and drips and leaks from rail cars are common. Additionally, herbicides and pesticides to keep the tracks clear of vegetation were often used. The use of the Site as a railroad spur is considered a REC.

C.P. Craska Trucking Co is listed for a spill (#9213720) that was reported on March 10, 1993 when contamination was observed during the removal of the 1,000-gallon diesel UST. It is noted that the tank was originally registered as a gasoline UST. This off-site spill has since been determined to be downgradient of the Site and so is not a concern with respect to site soil or groundwater quality impacts and so was not addressed in this Phase II Investigation.

1.4 Areas of Concern

Based on the findings of the Phase I ESA, HRP identified the following AOCs to be investigated as part of the Phase II ESA:

1. A portion of Parcel C was utilized as a foundry from at least 1884 to approximately 1959. Operations at the facility included molding, forging, annealing, grinding, and tumbling. This

area will be investigated to identify potential impacts related to the use of the Site for industrial operations. Contaminants of concern include:

- VOCs potentially associated with:
  - Petroleum products used and stored related to historical foundry operations
  - Wastes generated by historical foundry operations
- SVOCs potentially associated with:
  - Petroleum products used and stored related to historical foundry operations
- Metals potentially associated with:
  - Wastes generated by historical foundry operations
- PCBs potentially associated with:
  - Historical industrial equipment associated with the foundry that may have utilized PCB-containing oils

2. Several locations on Parcels B and C were formerly utilized for coal storage between approximately 1884 and 1959. These areas will be investigated to identify potential impacts related to coal storage on-site. Contaminants of concern include:
   - SVOCs potentially associated with:
     - Polycyclic aromatic compounds (PAHs) associated with the historical use of the Site for coal storage
   - Metals potentially associated with:
     - Historical use of the Site for coal storage

3. Portions of Parcels A, B, and C were utilized for petroleum storage including an oil tank, a fuel oil tank, and an oil house between 1897 and 1959. These areas will be investigated to identify potential impacts related to bulk petroleum storage on-site. Contaminants of concern include:
   - VOCs and SVOCs potentially associated with:
     - Petroleum products used and stored related to historical foundry and other industrial operations

4. Currently oil filled transformers are located on Parcel A. A transformer house was historically located on Parcel A from 1925 to 1959. Based on the assumed age of the transformers (pre-1979), the potential exists for the transformers to contain PCB oil. These areas will be investigated to identify potential impacts related to the storage of transformers on-site. Contaminants of concern include:
   - PCBs potentially associated with:
     - The presence of current and historical transformers

5. Trench drains are present throughout most of the production areas of Parcel A, which reportedly discharge to oil/water separators and the on-site process wastewater pretreatment plant. These areas will be investigated to identify potential impacts related to the discharge of liquid waste materials. Contaminants of concern include:
   - VOCs, SVOCs, metals, and PCBs potentially associated with:
     - The use of this area for waste discharge and treatment

6. The former Erie Canal was historically located on-site and was relocated between 1912 and 1925. The potential exists for contaminated non-native fill materials to have been used to

backfill the former canal bed. This area will be investigated to identify potential impacts related to the use of fill materials. Contaminants of concern include:
    - VOCs, SVOCs, metals, and PCBs potentially associated with:
        - Unknown fill material
        - Dumping or spilling of waste byproducts or material from historic operations on-Site
        - Other, unidentified sources

7. Railroad spurs were historically located on Parcels C and G. The potential exists for spills, drips, and leaks from rail cars to have contaminated surface soils. This area will be investigated to identify potential impacts related to the use of the Site for railroad infrastructure. Contaminants of concern include:
    - VOCs potentially associated with:
        - Petroleum products which may have dripped or leaked from rail cars
    - Chlorinated herbicides potentially associated with:
        - Historic treatment of railroad ties

8. Parcels D and E were historically operated as gasoline fueling stations. A groundwater investigation on-site identified petroleum by-products in soil and groundwater. Extensive groundwater monitoring has been conducted and residual contamination may exist at the Site. This area will be investigated to identify potential remaining petroleum constituents in Site soils. Contaminants of concern include:
    - VOCs and SVOCs potentially associated with:
        - Petroleum products used and stored related to industrial operations and the retail gasoline fueling stations
    - Metals potentially associated with:
        - Historic automotive maintenance potentially associated with the former on-site gasoline fueling station

9. This AOC will investigate areas of the Site left uncharacterized by other specific AOCs to identify potential impacts related to historical industrial use of the Site. Contaminants of concern are uncertain; however, the following contaminants of concern may be present in this AOC:
    - VOCs, SVOCs, metals, PCBs and chlorinated herbicides potentially associated with:
        - Various current and historical industrial operations

10. A few small soil piles were observed on Parcel F that were identified by the Site contact as having been excavated during a previous soil cleanup on-site. Waste characterization sampling was reportedly completed; however, no documentation was available for review during the Phase I ESA. The soil piles will be sampled for waste characterization for potential transportation and disposal off-site. Contaminants of concern are uncertain; however, the following contaminants of concern may be present in this AOC:
    - VOCs, SVOCs, metals, PCBs, chlorinated herbicides, and chlorinated pesticides potentially associated with:
        - Previous contamination excavated at or near the Site
        - Other, unidentified sources

AOCs are depicted in **Figure 2**.

2.0 PHYSICAL CHARACTERISTICS OF THE STUDY AREA

The following section discusses the physical characteristics and setting of the Site.

2.1 Site Features

The 38-acre Site is occupied by 44 industrial buildings totaling approximately 980,000 square feet on Parcels A and B and an approximately 100 square foot building on Parcel G. The remainder of the Site consists of paved surfaces (including parking lots and driveways) as well as fenced areas and grass fields. Access to Parcels A, B, C, and F are restricted by locked fences and on-site security guards. Parcels D, E, and G are accessible via adjoining public roads. Multiple residential properties adjoin the Site to the northeast and south/southeast; and multiple commercial properties adjoin the Site to the north and west. A Site Plan including the parcels is depicted on **Figure 2**.

2.2 Site Topography

The Site lies at an elevation between 400 and 475 feet above mean sea level. The Site is sloped towards the northeast, with relatively flat topography near the central and northeastern portions of the Site. The southern portion of the Site is topographically higher than the northern portion.

2.3 Soils

The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey classifies the Site as Herkimer gravelly silt loam, 0 to 3 percent slopes. Other soil types mapped as being on the Site include Hartland-Agawam complex, 8 to 15 percent slopes, and cut and fill land.

Based on field observations (**Section 4.2**), soils at the Site consist of varying depths of fill materials (approximately 0 to 35 feet below grade [ft bg]) characterized by varying amounts of brick, cinders, slag, concrete and/or wood fragments in a matrix of fine to medium sand and gravel. Fill thickness was observed to be greatest on the northern portion of the Site (Parcel B and Parcel C). Native fine to medium sands, silts, and clays were observed underlying fill materials across the Site, to approximate depths between 12.5-35 ft bg, where subsurface investigations ceased. Fill material and native soils are depicted in cross sections developed from boring logs in **Figures 3, 4** and **5.**

2.4 Geology

The Geologic Map of New York – Hudson-Mohawk Sheet indicates the Site is underlain by unknown bedrock geology. Depth to bedrock is estimated to be greater than 30 ft bg, as bedrock refusal was not met on any soil borings installed during the 1991 subsurface investigation or the current Phase II ESA.

2.5 Hydrogeology

2.5.1 Surface Water

No bodies of surface water were identified on-site. The body of surface water nearest the Site is the Mohawk River, located approximately 750 feet north of Parcel G, and approximately 2,200 feet north of Parcel C.

2.5.2 Groundwater

Eight overburden monitoring wells designated MW-1 through MW-8 were installed during the Phase II ESA. Depth to water measurements recorded at the eight monitoring wells September 27, 2024, ranged from 3.65 to 19.89 feet below top of casing and indicate groundwater flow direction is generally towards the north towards the Mohawk River, approximately 2,200 feet north of the Site. The groundwater levels recorded during the event are summarized in **Table 1.** Monitoring well locations and a groundwater contour map depicting flow direction are included as **Figure 7**.

3.0 FIELD ACTIVITIES

A description of field activities conducted during the Phase II ESA is presented in this Section. Field activities were completed in accordance with HRP's Site-Specific QAPP dated June 10, 2024, and approved by the EPA on July 24, 2024. Deviations based on field conditions are noted in **Section 3.4**.

Field work for this Phase II ESA included the following tasks:

- A limited geophysical survey was conducted to identify subsurface utilities and anomalies on-site (August 22-23 and 26-28, 2024).
- Installation of 55 soil borings (August 26 through September 16, 2024).
- Collection of 56 subsurface soil samples from the 55 soil borings, for laboratory analysis (August 26 through September 16, 2024).
- Installation of eight permanent 2-inch diameter overburden monitoring wells (August 29 through September 9, 2024).
- Development of monitoring wells (September 11 through 13, 2024);
- Collection of one composite sample of the soil from the shooting range, for laboratory analysis (September 17, 2024)
- Collection of groundwater samples from the eight newly installed monitoring wells, for laboratory analysis (September 26 and 27, 2024).
- Site Survey (October 4, 2024)

3.1 Geophysical Survey

On August 22 through 28, 2024, a limited geophysical survey was conducted by East Coast Geophysics, Inc. (ECG) using non-invasive radio detection, pipe and cable locator, and ground penetrating radar (GPR) equipment. A utility survey was first conducted using active and passive radio detection scans to identify subsurface utility lines. The Site was then scanned with a pipe and cable locator utilizing electromagnetic induction along 3-to-5-foot intervals to identify conductive features such as manholes, tanks, pipes, cables, and other metallic materials in the subsurface. GPR was then utilized to confirm the approximate size, shape, and depth of utilities and anomalies detected by transmitting electromagnetic waves from an antenna into the ground. The objective of the survey was to locate all detectable utilities in the areas of proposed boring locations. The geophysical survey report is included as **Appendix A**.

3.2 Soil Investigation

To characterize the Site's soils and investigate impacts related to historic Site operations, HRP and Core-Down Drilling, LLC (Core-Down) installed a total of 55 soil borings (SB-1 through SB-30, SB-32 through SB-52, and SB-60 through SB-63) at the Site between August 26 and September 16, 2024. Soil borings were advanced to a maximum depth of 35 ft bg. Core-Down used a Geoprobe 6712DT drill rig equipped with a 2.25-inch Macrocore sampler which was advanced using direct push technology. Soil samples were collected continuously by the Macrocore sampler in five-foot intervals. The soil boring locations are shown in **Figure 2** and are summarized in the Soil Boring Location Summary table as **Table 2**. Soil boring logs are included in **Appendix B**.

During soil boring installation, soil samples were logged and screened in five-foot increments by an HRP geologist. Soil samples were logged by grain size, color, moisture, presence of fill material, and obvious physical evidence of contamination (i.e., odor, staining). A small portion (1-2 oz.) of each sample was placed in an air-tight polyethylene bag and allowed to attain ambient temperature before photoionization detector (PID) headspace analysis for volatile compounds. PID headspace analysis measurements and soil descriptions are presented on soil boring logs included in **Appendix B**.

Following logging and screening, soil was placed in appropriate containers, labeled, and preserved on ice for laboratory analysis. A total of 56 soil samples (not including samples collected for QA/QC) were collected from the soil borings.

All non-disposable soil sampling equipment was decontaminated between samples using an Alconox wash followed by a clean water rinse. Boreholes that were not completed as monitoring wells were abandoned (backfilled) using drill cuttings and grout.

Soil samples were collected from depths ranging from 0.5 to 31 ft bg to characterize the various fill layers encountered during the investigation, identify impacts to soil at the water table, and delineate impacts to native soils. Included for the Phase II ESA was a composite soil sample (BS-200) taken from the basement of the shooting range, located on the 14 Hoefler Ave parcels. The sample was reportedly taken from the berm which was fired towards during firearm testing. Each subsurface soil sample was submitted under chain of custody to an ELAP certified laboratory. The soil samples that were collected and analyzed for the Phase II ESA are included in **Tables 3** through **6**.

Soil samples were not collected from the proposed SB-31 or the proposed SB-53 through SB-59 due to inaccessibility with the drill rig, as buildings, piping, and infrastructure features restricted equipment access. Soil samples were not collected from SB-50 due to shallow concrete refusal.

3.2.1 Waste Characterization

On September 16, 2024, eight soil samples were collected from the soil piles on Parcel F for waste characterization. Four composite samples (CS-1 through CS-4) and four grab samples (GS-1 through GS-4) were collected by HRP.

The waste characterization samples that were collected are summarized below.

Composite samples CS-1 through CS-4 were submitted for analysis of:

- SVOCs by EPA Method 8270
- PP metals by EPA Methods 6010D, 6020B, 7470A, and 7471B
- TCL PCBs via EPA Method 8082
- TCL pesticides via EPA Method 8081B

Grab samples GS-1 through GS-4 were submitted for the analysis of:

- TCL VOCs by EPA Method 8260

The soil samples collected for waste characterization are listed in **Table 7**.

3.3 Groundwater Investigation

3.3.1 Monitoring Well Installation

Between August 29 through September 9, 2024, eight overburden monitoring wells (MW-1 through MW-8) were installed by Core-Down with HRP oversight. The overburden wells were installed using a Geoprobe 6712DT drill rig equipped with 3 ¼ diameter direct push tooling. Monitoring wells were constructed of 2-inch diameter, schedule 40 PVC solid well pipe riser and 10-slot screen, positioned to intercept the water table. The annular space around each well screen was backfilled with #2 filter sand and sealed with bentonite chips. Each well was finished with a flush mounted protective cover. Well construction logs are included in **Appendix C**.

3.3.2 Monitoring Well Development

Monitoring wells were developed between September 11 and 13, 2024, using a submersible "whale" pump and dedicated low density polyethylene tubing to pump and surge the water column. Water quality field parameters including temperature, pH, dissolved oxygen, oxygen reduction potential, turbidity, and conductivity were recorded during the development of each well. Pumping and surging were continued at each well until water quality parameters (other than turbidity) were stabilized through three consecutive readings within 10% variability and turbidity was reduced below 50 nephelometric turbidity units (NTU), or for two hours, or until five well volumes were purged from the well, whichever was reached first. Non-disposable equipment (i.e., water level indicator, pump) was decontaminated prior to use in and between each well. Care was taken not to introduce contaminants to the equipment prior to use and between each well. All development water was transferred to a 55-gallon steel drum for future off-site disposal. Well development logs including water quality field parameters, depth to water measurements and purge volumes can be found in **Appendix C**.

3.3.3 Sampling Methods and Procedures

Groundwater wells were sampled in general accordance with low-flow techniques as described in the Site-specific QAPP. Monitoring well sampling data was recorded in the low-flow sampling log (provided in **Appendix C**).

The groundwater samples that were collected and analyzed are summarized below.

Groundwater samples from MW-2, MW-3, MW-4, MW-5, and MW-8 were submitted for analysis of:

- TCL VOCs by EPA Method 8260
- SVOCs by EPA Method 8270
- PP metals by EPA Methods 6010D, 6020B, 7470A, and 7471B

Groundwater samples from MW-1 and MW-6 were submitted for analysis of:

- TCL VOCs by EPA Method 8260
- SVOCs by EPA Method 8270
- PP metals by EPA Methods 6010D, 6020B, 7470A, and 7471B
- TCL PCBs via EPA Method 8082

No groundwater sample was collected from MW-7 due to the well being dry during sampling activities.

GROUNDWATER SAMPLE SUMMARY				
Sample ID	**Screen Setting**	**Sample Location**	**Justification**	**Analyses**
MW-1	17-27 ft bg	Parcel C, AOC 1	Evaluate impacts to groundwater associated with the use of the Site for historic foundry operations	TCL VOCs TCL SVOCs PP Metals TCL PCBs
MW-2	5-15 ft bg	Parcel C, AOC 3	Evaluate impacts to groundwater associated with the historical use and storage of petroleum products	TCL VOCs TCL SVOCs PP Metals
MW-3	17-27 ft bg	Parcel A, AOC 9	Evaluate impacts to groundwater associated with the historical use and storage of petroleum products	TCL VOCs TCL SVOCs PP Metals
MW-4	18-28 ft bg	Parcel E, AOC 8	Evaluate impacts to groundwater associated with the historic use of the Site as a gasoline fueling station	TCL VOCs TCL SVOCs PP Metals
MW-5	17-27 ft bg	Parcel D, AOC 8	Evaluate impacts to groundwater associated with the historic use of the Site as a gasoline fueling station	TCL VOCs TCL SVOCs PP Metals
MW-6	5-15 ft bg	Parcel A, AOC 5	Evaluate impacts to groundwater associated with the discharge of waste materials	TCL VOCs TCL SVOCs PP Metals TCL PCBs
MW-7	4-14 ft bg	Not Sampled	Well was dry, thus impacts to groundwater could not be evaluated.	N/A
MW-8	8-18 ft bg	Parcel A, AOC 9	Evaluate impacts to groundwater associated with historic industrial Site use; general Site coverage	TCL VOCs TCL SVOCs PP Metals

3.3.4 Groundwater Elevation Survey

On October 4, 2024, a monitoring well elevation survey was conducted by Emrich Land Surveying for the purpose of preparing a groundwater contour map and determining groundwater flow direction. Top of casing, ground and PVC elevations were recorded for the survey. Depth to water measurements were collected on September 26, 2024. These measurements are summarized on **Table 1**.

3.4 Deviations from QAPP

During the Phase II ESA, deviations from the QAPP were as follows:

- Soil borings SB-31 and SB-53 through SB-59 were not installed due to inaccessibility with the drill rig.

- Monitoring well locations MW-3 and MW-8 were relocated to adjacent borings (from SB-25 to SB-52 and from SB-62 to SB-63, respectively) due to shallow refusal during well installation at the originally proposed locations.
- Soil boring location SB-28 was moved outside of AOC 4 due to inaccessibility with the drill rig. SB-28 was moved adjacent to the transformer area on the southern portion of Parcel A.
- Soil samples were not collected from SB-50 due to shallow concrete refusal. Two soil samples were collected from adjacent SB-51 from two different intervals to characterize fill layers on the northeastern portion of Parcel A.
- MW-7 was not sampled due to the well running dry during sampling.
- Due to subsurface conditions, such as potentially conductive soils or fill material, the GPR survey depth was limited to 0-5 ft bgs during the Geophysical Survey.

These deviations did not impact HRP's ability to investigate the AOCs or complete the objectives of the Phase II ESA.

4.0 FINDINGS

To identify the nature and extent of contamination at the Site, HRP submitted soil and groundwater samples under chain of custody to York Analytical Laboratories in Richmond Hill, New York, a NYSDOH ELAP-certified laboratory. Samples were analyzed for VOCs, SVOCs, PCBs, Pesticides, Herbicides, and Priority Pollutant metals (including mercury) as outlined in the included tables. Laboratory analytical reports are included in **Appendixes D** and **E**.

A NYSDEC-approved independent data validator, Linda Tangen, was subcontracted to provide data validation services for this project. Data validation results are included in **Section 4.4** and the Data Usability Summary Reports (DUSRs) are presented in **Appendix F**.

Chemical compounds detected in the soil and groundwater sampled as part of the Phase II ESA and the analytical results are presented in **Tables 2** and **3**.

Soil and groundwater analytical results are compared to the following New York State standards, criteria, and guidance values (SCGs):

- NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1); Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations dated October 1993. Specifically, HRP compared groundwater sample results against NYSDEC Class GA Criteria.

- NYSDEC Regulation, 6 NYCRR Subpart 375-6, "Remedial Program Soil Cleanup Objectives" which apply to the development and implementation of the remedial programs for soil and other media set forth in subparts 375-2 through 375-4 [Inactive Hazardous Waste Disposal Site Remedial Program, Brownfield Cleanup Program, and Environmental Restoration Program] and includes the soil cleanup objective tables developed pursuant to ECL 27-1415(6).

To be consistent with the planned future commercial use, soil analytical results for this investigation were compared to NYSDEC 6 NYCRR Part 375-6 Commercial Use (CU) Soil Cleanup Objectives (SCOs).

4.1 Geophysical Survey

The limited geophysical survey was conducted by ECG from August 22 to August 28, 2024, with the objective of locating all detectable underground utilities adjacent to the proposed boring locations.

Electrical lines were identified surrounding the perimeter of the respective parking lots on the north side of the Site. Water lines were identified surrounding the perimeter of the respective buildings within the 14 Hoefler Ave parcels. Gas lines were identified entering the property from and along E Main Street. Sewer lines were detected below and parallel to East Main Street and Otsego Street, as well as entering from the north through the main parking lot area. An unknown utility line was detected entering from the east towards the main parking lot area. The GPR depth of penetration during the survey was reportedly limited to 0-5 ft bg. The geophysical report, which includes locations of the identified anomalies and utility lines, is attached as **Appendix A**.

4.2 Soil Investigation

Observations

Asphalt and sub-base consisting of fine to medium sand and fine to medium gravel was observed at the surface within the paved areas of Parcels A, B, C, D, and E. Surface soils, where not covered by building slabs or pavement, consisted of fine sand and silt with varying amounts of gravel and organic material, to a maximum depth of 1 ft bg. Fill materials were found to underly asphalt and surface soils to a maximum depth of 27.5 ft bg. Fill materials consisted of varying amounts of cinders, brick, weathered concrete, slag, and/or wood fragments in a fine to medium sand and fine to coarse gravel matrix. Fill was underlain by native soils, consisting of fine to medium sands and silts with varying amounts of gravel to a maximum depth of 35 ft bg, where subsurface investigations ceased. Clay was observed underlying sand and silt on the southern portion of Parcel A. Samples were also collected from the soil pile on Parcel F for waste characterization and for identification of potential contaminants.

On August 29, 2024, while drilling at MW-4, approximately 1-2 inches of possible petroleum non-aqueous phase liquid (NAPL) was observed, exhibiting an odor and high PID reading (1,146 ppm). On August 30, 2024, this apparent petroleum spill was called into the DEC Spills Hotline and recorded as Spill 2405123. However, on September 13, 2024, during groundwater development and purging, no NAPL was identified and only a strong odor was observed. Additionally, during low-flow sampling on September 26, 2024, no staining, odors, or other types of impact were observed in the monitoring well.

Staining, sheens, odors, and/or elevated PID readings were observed in 18 of the 55 borings installed during the Phase II ESA. Most of these observations were observed in AOCs 1, 2, 3, and 8 with the highest PID reading recorded (1,513 ppm) at SB-14 in AOC 1. The greatest incidence of soil staining was observed within AOC 8, particularly at soil borings 40, 43, 44, 46, and 47. A depiction of depth to native material is included in **Figures 3, 4,** and **5**. Soil boring logs are included in **Appendix B**. Observations of these properties at their respective locations are described in detail in the table below.

Soil Boring ID	Approximate Depth to Groundwater (ft bg)	Sample Depth (ft bg)	Observations
SB-3	20	14-16	PID (84.0 ppm), odor
SB-5	20	17.5-20	PID (98.4 ppm), odor
SB-6	20	21-23	PID (0.0) Odor
SB-7	23	15-18	PID (55.8 ppm), odor
SB-8	25	25-28	PID (79.9 ppm)
SB-9	25	17-20	PID (36.9 ppm), odor
SB-10	24	23-26	PID (320.6 ppm), odor
SB-11	20	20-23	PID (140.4 ppm), odor
SB-12	-	10-12	PID (26.4 ppm)

Soil Boring ID	Approximate Depth to Groundwater (ft bg)	Sample Depth (ft bg)	Observations
SB-14	25	12-15	PID (1,513 ppm), odor, staining
SB-15	25	20-23	PID (73.5 ppm), odor
SB-16	21	21-24	PID (63.1 ppm), odor
SB-22	20	16-18	Odor
SB-23	21	18-21	PID (122.1 ppm), odor
SB-24	25	23-25	PID (235.0 ppm), odor, sheen
SB-26	-	5-6	PID (3.0 ppm), odor
SB-33	-	8-10	PID (85.6 ppm)
SB-34	24.5	25-27	PID (58.1 ppm), odor
SB-40	19	22-24	PID (791.9 ppm), odor, stain
SB-41	20	5-9	PID (7.5 ppm), odor
SB-42	19.5	20-23	PID (6.9 ppm), odor
SB-43	20	13-15	PID (976.4 ppm), odor, stain
SB-44	24.5	22-25	PID (325.9 ppm), odor, stain
SB-45	25	28-30	PID (224.7 ppm), odor
SB-46	23	20-23	PID (511.4 ppm), odor, stain
SB-47	20	25-27	PID (1,146 ppm), odor, stain
SB-48	23.5	28-31	PID (15.0 ppm), odor
SB-52	20	25-27	PID (0.0) Odor, stain

Fill material was observed from grade to a maximum depth of 27.5 ft bg across the Site. Fill materials consisted of varying amounts of cinders, brick, wood fragments, weathered concrete and/or slag within a fine-medium sand and gravel matrix.

Analytical Results

The soil samples collected were analyzed as described in **Section 3.2**. A total of 57 samples were collected at depths ranging from surface to 31 feet below grade (ft bg) for various laboratory analyses. A comprehensive summary of soil sample results from the investigation is presented on **Tables 3** through **6**. Soil samples which exceed Commercial Use Soil Cleanup Objectives are highlighted in this section. The laboratory report is provided in **Appendix D.**

Volatile Organic Compounds (VOCs)

No VOCs were detected at concentrations exceeding CU SCOs in any of the soil samples. Several VOCs were detected above laboratory detection limits which did not exceed SCOs. Detected VOCs are presented in **Table 3**.

Semi Volatile Organic Compounds (SVOCs)

Petroleum related SVOCs were detected at concentrations exceeding applicable regulatory criteria in three of the samples collected during the Phase II ESA. Benzo(a)pyrene was detected at concentrations exceeding Commercial Use (CU) SCOs in samples SB-13, SB-25, and SB-61. Several additional SVOCs were detected at concentrations above laboratory detection limits which did not exceed SCOs. SVOC exceedances are not localized to one parcel. SVOC detections in soil are included in **Table 4** and are shown in **Figure 6.**

Metals

Metals, including arsenic, copper, lead, and nickel were detected at elevated concentrations, some higher than typical background levels, as defined in NYSDEC CP-51 Soil Cleanup Guidance and NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, in 22 of the 57 samples collected. Arsenic was detected at concentrations exceeding CU SCOs in 19 samples. Copper was detected at concentrations exceeding CU SCOs in samples SB-2, SB-29, and SB-33. Lead was detected at concentrations exceeding CU SCOs in samples BS-200 and SB-29, respectively. Nickel was detected at concentrations exceeding CU SCOs in sample SB-33. Metals that were detected at concentrations exceeding laboratory detection limits are presented in **Table 5**. Exceedances of metals were all found within the observed fill material, all of which were in soil beneath asphalt in each of their respective sample locations.

The BS-200 soil sample is a surface soil sample collected in the shooting range floor of Building 52. Substantially elevated lead concentrations in this soil are likely attributed to years of shooting in this basement.

PCBs

No PCBs were detected in concentrations exceeding applicable regulatory criteria in any of the soil samples. PCB detections in soil are included in **Table 6**.

4.2.1 Waste Characterization

Analytical Results

Eight soil samples were collected for waste characterization as described in **Section 3.2.1**. Sample results from the Phase II ESA are presented below and in laboratory analytical reports included in **Appendix D.**

VOCs

No VOCs were detected in concentrations exceeding applicable regulatory criteria in any of the samples. Methylene chloride, a common laboratory contaminant, was detected above laboratory detection limits but did not exceed applicable regulatory SCOs. VOC detections in waste characterization soil are included in **Table 7.**

SVOCs

No SVOCs were detected in concentrations exceeding applicable regulatory criteria in any of the samples. Several SVOCs were detected at concentrations above laboratory detection limits but did not exceed applicable regulatory SCOs. SVOC detections in waste characterization soil are included in **Table 7**.

Metals

No metals were detected in concentrations exceeding applicable regulatory criteria in any of the samples. Several metals were detected at concentrations above laboratory detection limits but did not exceed applicable regulatory SCOs. Metal detections in waste characterization soil are included in **Table 7**.

PCBs

No PCBs were detected in concentrations exceeding applicable regulatory criteria in any of the soil samples. PCB detections in soil are included in **Table 7**.

4.3 Groundwater Investigation

Observations

Depth to groundwater across the Site ranges from approximately 4 ft to 19 ft below grade with higher gradient in the south/southwest region of the Site and lower gradient in the north/northeast area of the Site. Groundwater is estimated to flow to the northeast towards the Mohawk River. Groundwater monitoring logs are included in **Appendix C**. Groundwater data, including groundwater contours, flow direction, and Class GA exceedances are depicted on **Figure 7**.

Odors and sheens were observed in the water purging from MW-1 and MW-4. No sheens or odors were observed during the gauging, development, or sampling activities of any other monitoring wells.

Analytical Results

The groundwater samples collected were analyzed and described in **Section 3.3**. A total of seven groundwater samples were collected for various laboratory analysis. A comprehensive presentation of groundwater sample results from the investigation are presented on **Table 8**. Groundwater samples that exceed NYSDEC Class GA Criteria are depicted in **Figure 7**. The laboratory report is provided in **Appendix E**.

VOCs

Petroleum VOCs were detected at concentrations exceeding applicable regulatory criteria in two of the samples collected during the Phase II ESA. Petroleum related BTEX (Benzene, Toluene, Ethylbenzene, and Xylene) compounds were detected exceeding NYSDEC Class GA Criteria in samples MW-2 and MW-4. Additional VOCs were detected at concentrations above laboratory detection limits which did not exceed NYSDEC Class GA Criteria. VOC exceedances are not limited to one parcel. VOC detections are included in **Table 8** and are shown in **Figure 7**.

SVOCs

No SVOCs were detected at concentrations exceeding NYSDEC Class GA Criteria in any of the groundwater samples. Several SVOCs were detected above laboratory detection limits which did not exceed GA criteria. Detected SVOCs are presented in **Table 8**.

Metals

No metals were detected at concentrations exceeding NYSDEC Class GA Criteria in any of the groundwater samples. Mercury was detected above laboratory detection limits but did not exceed GA criteria. Detected metals are presented in **Table 8**.

PCBs

No PCBs were detected in concentrations exceeding laboratory detection limits in any of the groundwater samples.

4.4 Data Validation and Usability

Analytical data obtained during the Phase II ESA has been validated by an independent data validator, Linda Tangen, to evaluate the usability of the data. The DUSRs indicate which data are subject to limitations and identify certain data that are flagged as rejected and should not be used. The DUSR indicated the following data were rejected:

- Multiple "non-detected" soil and groundwater samples: rejected due to poor laboratory control sample (LCS) recovery.
- Several "non-detected" soil samples: rejected due to exceeding internal standards (IS), continuing calibration verification standards (CCV), matrix spikes (MS) and serial dilutions (SD).
- Numerous "non-detected" groundwater samples were rejected due to hold time (HT) being five days past HT for prep due to the samples requiring a re-extraction in the lab.

Samples from SB-15 were detected at concentrations above regulatory standards and were rejected for the following:

- Isopropylbenzene (Cumene) was rejected for MS – (-)75.4 recorded; field duplicate 88.3 relative percent difference (RPD)
- Methylcyclohexane was rejected for MS – (-)13.6 recorded; field duplicate 48.5 RPD
- N-Butylbenzene was rejected for SD – 42.5% difference
- N Propylbenzene was rejected for MS – (-)187 recorded; field duplicate 80 RPD

HRP does not consider the rejected data to impact the results of the investigation. The data validation results have been included as **Appendix F**.

5.0 CONCLUSIONS

The objectives of this Phase II Environmental Site Assessment (ESA) were to assist the Herkimer County IDA in the following:

- To address recognized environmental conditions (RECs) identified in the Phase I ESA related to the historic use of the Site
- Identifying conditions relative to future commercial site uses relative to Areas of Concern (AOCs) identified in the Phase I ESA.

The Phase II subsurface investigation was performed in general compliance with American Society for Testing and Materials (ASTM) E1903-19 standards of subsurface investigations and site characterization as well as New York State Department of Environment and Conservation (NYSDEC) Der-10 Site Investigation and Remediation standards

Based on HRP's understanding of the planned future use of the Site (commercial Use Redevelopment) and information collected to date, HRP offers the following conclusions:

General Sitewide Conclusions

Shallow soils at the Site generally consist of varying depths of fill materials (approximately 0 to 35 feet below grade [ft bg]) characterized by varying amounts of brick, cinders, slag, concrete and/or wood fragments in a matrix of fine to medium sand and gravel. Fill thickness was observed to be greatest on the northern portion of the Site (Parcel B and Parcel C). Fill material and native soils are depicted in cross sections developed from boring logs in **Figures 3, 4** and **5**. In 22 of the 57 samples collected and analyzed, fill materials were found to contain arsenic, copper, lead, and nickel at elevated concentrations, some higher than typical background levels, as defined in NYSDEC CP-51 Soil Cleanup Guidance and NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation. There is no known use of these metals on the site and so these elevated levels of metals are attributable to the quality of the fill materials that were historically imported onto the property when it was developed.

Site soil sampling and analysis also identified low levels of petroleum volatile organic compounds and semi-volatile organic compounds, likely from historic site spills when petroleum fuels and lubricants were stored and used on the site.

Additionally, historic sampling of fill materials north of Building 56 reportedly contained elevated levels of cyanide, discovered during a water line repair job when the soil was sampled for disposal. There is some speculation that cyanide in the soil could have come from historic heat treating of metals in this area of the site.

Exposure to fill materials is currently isolated due to the extensive site cover provided by buildings and paved parking surfaces. If future development of the site includes removal of site buildings and barrier surfaces, a soil management plan should be implemented to ensure that workers and the public are not exposed to dust from excavation or other handling and movement of these soils. Similar encapsulation as a result of Site development through the use of paved surfaces, building coverage and other barrier surfaces can serve to maintain stability of these materials and eliminate

surface exposure to fill materials containing these metals. If soil is to be removed from the Site and disposed, it should be characterized and re-used or disposed of at appropriate locations, based on the results of characterization and regulatory re-use requirements.

AOC Area Conclusions

AOC Designations are described in **Section 1.4** and the locations are depicted on **Figure 2**.

AOC 1: The concerns for this AOC are based on its former use as a foundry when Remington Arms used it from at least 1884 to approximately 1959. Based on soil sample results, AOC 1 has elevated levels of metal present in soil, which are likely associated with fill materials. No other impacts to soil or groundwater quality above regulatory cleanup or re-use standards were identified on this AOC. Soil Management recommendations should apply to this AOC.

AOC 2: AOC 2 was of concern relative to historical coal storage in this area of the Site. Based on soil sampling and laboratory analysis results, all detected compounds in soil and groundwater on this AOC are below respective Commercial Use (CU) Soil Cleanup Objectives (SCO's) and Class GA groundwater quality standards.

AOC 3: The concerns for this AOC are based on its former use as petroleum storage area(s) when Remington Arms used it between 1897 and 1959. Due to high photoionization detector (PID) readings, detected semi-volatile organic compound (SVOC) exceedances for CU SCOs, and volatile organic compound (VOC) Class GA exceedances in groundwater, AOC 3 is impacted with petroleum which may be related to historical petroleum storage and usage in this AOC. The contamination is currently covered and immobile. Soil Management recommendations should apply to this AOC.

AOC 4: The concerns for this AOC are based on its former use as an oil-filled transformer house when Remington Arms used it from 1925 to 1959. Additionally, current oil-filled transformers that predate PCB regulations (pre-1979) are located within this AOC. Based on soil sampling and laboratory analysis results, all detected compounds in soil and groundwater on this AOC are below respective CU SCOs and Class GA groundwater quality standards.

AOC 5: The concerns for this AOC are based on its former use as trench drainage, oil/water separators, and an on-Site wastewater pretreatment plant during factory operations. Based on soil sample results, this AOC has elevated levels of metal present in soil, which are likely associated with fill materials. There were no groundwater standard exceedances identified in this AOC. Soil Management recommendations should apply to this AOC.

AOC 6: The concerns for this AOC are based on its historic use as the Erie Canal, particularly when the canal was relocated and filled between 1912 and 1925. Based on soil sample results, this AOC has elevated levels of metal present in soil, which are likely associated with fill materials. There were no groundwater standard exceedances identified in this AOC. Soil Management recommendations should apply to this AOC.

AOC 7: The concerns for this AOC are based on its historic use as the railroad spurs, with potential risk of spills and leaks from rail cars. Based on soil sample results, this AOC has elevated levels of metal present in soil, which are likely associated with fill materials. There were no groundwater

standard exceedances identified in this AOC. Soil Management recommendations should apply to this AOC.

AOC 8: The concerns for this AOC are based on the former presence of gasoline fueling stations. Based on PID readings and groundwater sample results, AOC 8 has elevated levels of VOCs present in groundwater which are likely related to historic use of this area for petroleum fueling. A spill reported to DEC on August 30, 2024 (Spill # 2405123) will have to be addressed and ultimately closed. This condition exists within an area of a historic closed site petroleum spill and appears to be confined within a small, localized area of the site. Soil Management recommendations should apply to this AOC.

AOC 9: The concerns for this AOC are based on general historic use related to general and/or unidentified industrial use of the Site. Arsenic and benzo(a)pyrene concentrations exceeded NYSDEC Part 375 CU standards. Metal exceedances are likely from non-native material. There are no groundwater exceedances in this AOC. Building 56 lies within AOC 9 and has reported cyanide impacts in soil. Soil Management recommendations should apply to this AOC.

This AOC also included Building 52 where the basement was historically used as a shooting range. A soil sample collected in this former shooting range was found to contain lead at concentrations substantially higher than cleanup and reuse standards. Soil in this basement area should be further investigated to determine the extent of the lead impacted soil area and to characterize the soil for disposal purposes. Access to this basement area should be restricted until the extent of the impact and health concerns for lead exposure to the basement soil and dust have been addressed.

AOC 10: The concerns for this AOC are based on a few small polyethylene-covered soil piles that stockpiled from a previous on-Site soil cleanup. As there was no waste characterization data for HRP's review, the piles were sampled for potential transportation and disposal off-Site. Based on soil sample results, AOC 10 has no CU SCO exceedances. Soil Management recommendations should apply to this AOC.

Soil Boring Locations and Soil Sample Summary
Remington Arms, Multiple Parcels
14 Hoefler Avenue, East Main Stree, Commerce Street, Highland Avenue
Ilion, New York

SOIL BORING LOCATION AND SAMPLE SUMMARY							
Area of Concern (AOC)	Soil Boring ID	Total Depth (ft bg)	Location	Justification	Sample Depth (ft bg)	Sample Collection Justification	Analysis
AOC 1: Foundry	SB – 1	14 (refusal)	Northwestern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	12-14	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 2	30	Northwestern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	0.5-4	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 3	30	Northwestern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	14-16	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (84.0 ppm), odor, grey-black staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 4	14 (refusal)	Western portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	0.5-0.25	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 5	30	Western portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	17.5-20	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (98.4 ppm), odor, grey-black staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 6	30	Southwestern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	21-23	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (19.0 ppm), odor, grey-black staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 7	30	Southwestern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	15-18	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (55.8 ppm), odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 8	30	Southwestern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	25-28	Investigate potential impacts to native soil, odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 9	30	Central portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	17-20	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (36.9 ppm), odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 10	30	North-central portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	23-26	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (320.6 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 11	30	Northeastern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	20-23	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (140.7 ppm), odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 12	12.5 (refusal)	Northeastern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	10-12	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 13	4 (refusal)	Northeastern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	2-4	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 14	30	East-central portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	12-15	Investigate impacts at water table related to historic activities associated with Site use; elevated PID reading (1,513 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 15	30	Eastern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	20-23	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (73.5 ppm), odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 16	30	Eastern portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	21-24	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (63.1 ppm), odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 17	30	South-central portion of the former foundry (AOC 1)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations	25-28	Investigate potential impacts to native soil	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 1: Foundry	SB – 18	5	Northern portion of coal storage within Parcel C (AOCs 1 and 2)	Evaluate potential impacts to surface soil associated with the use of the Site for coal storage	2-5	Characterize fill and potential impacts to Site soils from historic fill material	PAHs By EPA Method 8270E PP Metals by EPA Method 6010D
AOC 1: Foundry	SB – 19	5	Southern portion of coal storage within Parcel C (AOCs 1 and 2)	Evaluate potential impacts to surface soil associated with the use of the Site for coal storage	1-3	Characterize fill and potential impacts to Site soils from historic fill material	PAHs By EPA Method 8270E PP Metals by EPA Method 6010D
AOC 2: Coal Storage	SB – 20	5	Along East Main Street within Parcel A; eastern portion of Site, south of former coal storage (AOC 2)	Evaluate potential impacts to surface soil associated with the use of the Site for coal storage	1-2.5	Characterize fill and potential impacts to Site soils from historic fill material	PAHs By EPA Method 8270E PP Metals by EPA Method 6010D
AOC 2: Coal Storage	SB – 21	5	Along East Main Street within Parcel A; central portion of Site, south of former coal storage (AOC 2)	Evaluate potential impacts to surface soil associated with the use of the Site for coal storage	1-2.5	Characterize fill and potential impacts to Site soils from historic fill material	PAHs By EPA Method 8270E PP Metals by EPA Method 6010D
AOC 3: Petroleum Storage	SB – 22	30	Western portion of the former foundry (AOCs 1 and 3)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations and historical use and storage of petroleum products	16-18	Investigate impacts at water table; odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 3: Petroleum Storage	SB – 23	30	Northern portion of the former foundry, within former petroleum storage area (AOCs 1 and 3)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations and historical use and storage of petroleum products	18-21	Investigate impacts at water table related to historic activities associated with Site use; elevated PID reading (122.1 ppm), odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 3: Petroleum Storage	SB – 24	30	Southeastern portion of the former foundry, within former petroleum storage area (AOCs 1 and 3)	Evaluate potential impacts to soil associated with the use of the Site for historic foundry operations and historical use and storage of petroleum products	23-25	Investigate impacts at water table related to historic activities associated with Site use; elevated PID reading (235.0 ppm), odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 3: Petroleum Storage	SB – 25	30	North of former petroleum storage area (AOC 3)	Evaluate potential impacts to soil associated with historical use and storage of petroleum products	1-3	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 3: Petroleum Storage	SB – 26	20	Northwest of former petroleum storage area (AOC 3)	Evaluate potential impacts to soil associated with historical use and storage of petroleum products	5-6	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 4: Transformer	SB – 27	4 (refusal)	Western portion of Parcel A (AOC 4)	Evaluate potential impacts to surface soil associated with the presence of transformers with potential PCB-containing oil	1-3	Characterize fill and potential impacts to Site soils from historic fill material	TCL PCBs by EPA Method 8082
AOC 4: Transformer	SB – 28	5	South-central portion of Parcel A, west of transformer area (AOC 4)	Evaluate potential impacts to surface soil associated with the presence of transformers with potential PCB-containing oil	0.5-2	Characterize fill and potential impacts to Site soils from historic fill material	TCL PCBs by EPA Method 8082
AOC 5: Wastewater Processing	SB – 29	20	Western portion of Parcel A, within wastewater treatment area (AOC 5)	Evaluate potential impacts to soil associated with the discharge of waste materials	1-4	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082
AOC 5: Wastewater Processing	SB – 30	20	Central portion of Parcel A, within wastewater treatment area (AOC 5)	Evaluate potential impacts to soil associated with the discharge of waste materials	4-6	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082

Table 2
Soil Boring Locations and Soil Sample Summary
Remington Arms, Multiple Parcels
14 Hoefler Avenue, East Main Stree, Commerce Street, Highland Avenue
Ilion, New York

SOIL BORING LOCATION AND SAMPLE SUMMARY							
Area of Concern (AOC)	Soil Boring ID	Total Depth (ft bg)	Location	Justification	Sample Depth (ft bg)	Sample Collection Justification	Analysis
AOC 7: Railroad Spur	SB – 35	5	Southeastern portion of Parcel C; within footprint of former railroad tracks (AOC 7)	Evaluate potential impacts to surface soil within footprint of former railroad tracks	1-4	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL Herbicides by EPA Method 8151
AOC 7: Railroad Spur	SB – 36	5	Southeastern portion of Parcel C; within footprint of former railroad tracks (AOC 7)	Evaluate potential impacts to surface soil within footprint of former railroad tracks	3-5	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL Herbicides by EPA Method 8151
AOC 7: Railroad Spur	SB – 37	5	Northern portion of Parcel G (AOC 7)	Evaluate potential impacts to surface soil within footprint of former railroad tracks	2.5-3.5	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL Herbicides by EPA Method 8151
AOC 7: Railroad Spur	SB – 38	5	Central portion of Parcel G (AOC 7)	Evaluate potential impacts to surface soil within footprint of former railroad tracks	3-5	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL Herbicides by EPA Method 8151
AOC 7: Railroad Spur	SB – 39	5	Southern portion of Parcel G (AOC 7)	Evaluate potential impacts to surface soil within footprint of former railroad tracks	1.5-3.5	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL Herbicides by EPA Method 8151
AOC 8: Gasoline Fueling Station	SB – 40	30	Northern portion of former gasoline fueling station; Parcel D (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	22-24	Investigate impacts at water table related to historic activities associated with Site use; elevated PID reading (791.9 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 41	30	Eastern portion of former gasoline fueling station; Parcel D (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	5-9	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 42	30	Central portion of former gasoline fueling station; Parcel D (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	20-23	Investigate impacts at water table related to historic activities associated with Site use; odor	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 43	30	Southern portion of former gasoline fueling station; Parcel D (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	13-15	Investigate impacts above water table related to historic activities associated with Site use; elevated PID reading (976.4 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 44	30	Western portion of former gasoline fueling station; Parcel D (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	22-25	Investigate impacts at water table related to historic activities associated with Site use; elevated PID reading (326.9 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 45	30	Northwestern portion of former gasoline fueling station; Parcel E (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	28-30	Investigate potential impacts to native soil	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 46	30	Northeastern portion of former gasoline fueling station; Parcel E (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	20-23	Investigate impacts at water table related to historic activities associated with Site use; elevated PID reading (511.4 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 47	30	Central portion of former gasoline fueling station; Parcel E (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	25-27	Investigate impacts above water table related to historic activities associated with Site use; elevated PID reading (1,146 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 48	35	Southwestern portion of former gasoline fueling station; Parcel E (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	28-31	Investigate potential impacts to native soil	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 8: Gasoline Fueling Station	SB – 49	30	Southeastern portion of former gasoline fueling station; Parcel E (AOC 8)	Evaluate potential impacts to soil associated with the historic use of the Site as a gasoline fueling station	27-30	Investigate potential impacts to native soil	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 9:	SB – 50	0.75 (refusal)	Northern portion of Parcel A; along East Main Street (AOC 9)	Evaluate potential impacts to soil associated with historic Site usage; general Site coverage	N/A	N/A	N/A
AOC 9:	SB – 51	13 (refusal)	Northern portion of Parcel A; along East Main Street (AOC 9)	Evaluate potential impacts to soil associated with historic Site usage; general Site coverage	10-13	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 9:	SB – 52	30	South of East Main Street; central portion of Parcel A (AOC 9)	Evaluate potential impacts to soil associated with historic Site usage; general Site coverage	25-27	Investigate impacts at water table related to historic activities associated with Site use; slightly elevated PID reading (2.1 ppm), odor, grey staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 9:	SB – 60	20	West of wastewater treatment building (AOC 9)	Evaluate potential impacts to soil associated with historic Site usage; general Site coverage	3-6	Characterize fill and potential impacts to Site soils from historic fill material; slightly elevated PID reading (14.2 ppm), black staining	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 9:	SB – 61	15 (refusal)	Southwestern portion of Parcel A (AOC 9)	Evaluate potential impacts to soil associated with historic Site usage; general Site coverage	2-5	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 9:	SB – 62	30	Southern portion of Parcel A; west of power plant (AOC 9)	Evaluate potential impacts to soil associated with historic Site usage; general Site coverage	2-5	Characterize fill and potential impacts to Site soils from historic fill material	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 9:	SB – 63	20	Southern portion of Parcel A; south of power plant (AOC 9)	Evaluate potential impacts to soil associated with historic Site usage; general Site coverage	10-12	Investigate potential impacts at water table	TCL VOCs by EPA Method 8260 TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D
AOC 10:	G-1	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL VOCs by EPA Method 8260
AOC 10:	G-2	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL VOCs by EPA Method 8260
AOC 10:	G-3	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL VOCs by EPA Method 8260
AOC 10:	G-4	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL VOCs by EPA Method 8260
AOC 10:	C-1	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082 TCL Herbicides by EPA Method 8148
AOC 10:	C-2	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082 TCL Herbicides by EPA Method 8149
AOC 10:	C-3	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082 TCL Herbicides by EPA Method 8150
AOC 10:	C-4	N/A	Northern portion of Parcel F; Highland Ave Parcel (AOC 10)	Evaluate potential transportation and disposal of waste off-site	N/A	Waste characterization	TCL SVOCs by EPA Method 8270 PP Metals by EPA Method 6010D TCL PCBs by EPA Method 8082 TCL Herbicides by EPA Method 8151

Legend	
<1	Parameter not detcted above the laboratory reporting limit
1	Parameter reported at a concentrations greater than Part 375 Unrestric
1	Parameter reported at a concentrations greater than Part 375 Restricted Residential SCOs
1	Parameter reported at a concentrations greater than Part 375 Commerical SCOs
1	Parameter reported at a concentrations greater than Part 375 Industrial SCOs
1	Parameter reported above the laboratory reporting limit but below the appilicable regulatory standard/criterion

Notes:
ft bg = feet below grade
mg/kg = micrograms per kilogram
NA = Not Analyzed
NP = not promulgated/ no applicable SCO
R = Data are rejected and are not usable for any purpose
SCO Soil Cleanup Objective
ft bg = feet below grade
mg/kg = micrograms per kilogram
NA = Not Analyzed
NP = not promulgated/ no applicable SCO
R = Data are rejected and are not usable for any purpose
SCO Soil Cleanup Objective

Legend	
<1	Parameter not detcted above the laboratory reporting limit
1	Parameter reported at a concentrations greater than Part 375 Unrestricted SC
1	Parameter reported at a concentrations greater than Part 375 Restricted Residential SCOs
1	Parameter reported at a concentrations greater than Part 375 Commerical SCOs
1	Parameter reported at a concentrations greater than Part 375 Industrial SCOs
1	Parameter reported above the laboratory reporting limit but below the applicable regulatory standard/criterion

Notes:
ft bg = feet below grade
mg/kg = micrograms per kilogram
NA = Not Analyzed
NP = not promulgated/ no applicable SCO
R = Data are rejected and are not usable for any purpose
SCO Soil Cleanup Objective

NOTES:
Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

Michael Johns
East Coast Geophysics Inc.
501 Cambria Avenue Suite 281, Bensalem, Pennsylvania, 19020

1. BACKGROUND AND PROJECT OBJECTIVES

On August 22nd, 2024, East Coast Geophysics, Inc. performed a limited geophysical survey at 150 Water Street. The site is currently occupied by Remington Arms. The survey will take place at client specified areas. Surface conditions consistent of asphalt, concrete, reinforced concrete and tended grass. Site project objectives are:

- Locate all detectable underground utilities adjacent to the client proposed boring locations.

2. EQUIPMENT

This project used the following equipment to perform the geophysical survey on the property.

- *GSSI SIR-3000 Cart Mounted Ground Penetrating Radar System*

Ground Penetrating Radar is a non-invasive geophysical method in which electromagnetic pulses probe the subsurface, allowing targets to be imaged in real time. The EM pulses that are transmitted into the subsurface are reflected from various interfaces within the ground, including soil horizons, ground water, and manmade features such as underground storage tanks and utilities. The GPR antenna consists of a transmitter, which is used to create the EM pulse, and a receiver which collects returning signals. The high frequency waves created by the antenna can be generated in a range of 10 MHz to 2.6 GHz. The frequency of the antenna will vary the depth of penetrations, signal clarity, and attenuation into the subsurface. The antenna used for general field work by ECG is 400 MHz; this frequency range has the capability to transmit to a depth of up to 10 feet below ground surface. Surface and subsurface conditions can greatly reduce the effective depth of the signal penetration; these conditions include conductive soils, slag/fill material and standing water.

- *Radiodetection RD7000+*

RD7000 is an advanced high-range precision utility detector capable of detecting utilities up to 15 feet below ground surface. The RD7000+ has the capability of locating a variety of pipes and cables using either passive or active modes. Passive signals can be traced with only the transmitter using "natural" signals present in many conductors. These signals can be generated from an array of sources including power cables, power system return currents, and long wave radio frequencies. **Active** signals are known AC frequencies induced onto a target pipe or cable. User induced signals can help positively identify lines throughout areas of congested utilities.

- *Fisher TW-6 Pipe and Cable Locator*

The Fisher TW-6 Pipe and cable locator uses electromagnetic induction to locate conductive materials, such as manholes, tanks, pipes, cables, and other metallic materials in the subsurface. The transmitter generates an AC current which produces an electromagnetic field similar to a dipole magnet. When the transmitter passes over a conductive feature, the generated electromagnetic field becomes distorted as a result of the interference with the natural electromagnetic field created by the conductive feature. The distortion of the generated field is detected by the receiver which emits a tone that is correlated to the conductivity of the feature.

3. PROCEDURE

ECG personnel began with a utility survey utilizing active detection with the RD-7000+. This is done by directing hooking up to known surface features across the site such as lamp posts, electric / communication boxes, and valves. The surveyor then performed a passive scan with the RD-7000+ receiver to detect any energized utilities that may have not been located with the active scan. Any detected utilities were then marked in the field.

ECG personnel then walked across the survey area with the TW-6 in 3-5 foot spacing increments. The approximate size and shape of any conductive targets detected was then marked in white and will be further investigated with GPR.

GPR was then utilized to confirm the approximate depth of any utilities detected with the RD-7000+ and the size, shape, and depth of any anomalies located with the TW-6.

4. RESULTS

- **Underground Utilities** – All utilities were marked in APWA designated colors.
- **Anomalies**
    - ECG personnel scanned all areas within a 10 feet area of each boring location on site using TW-6 and GPR and detected no subsurface anomalies.

A site map (092824) is attached portraying all detected subsurface features.

5. SITE LIMITATIONS

- Ground Penetrating Radar – GPR depth of penetration was limited to 0-5 feet bgs. Conductive soils and fill material can limit the depth of signal penetration.
- The TW-6 cannot be utilized within close proximity to parked vehicles, reinforced concrete, or any other large metallic features.

6. DISCLAIMER

The limitations of a geophysical survey from both the site and equipment are important to consider when performing intrusive work at a survey site. The equipment is unable to maintain a constant depth of penetration or a constant level of effectiveness over the course of a survey due to subsurface and environmental conditions. The results provided both in this report and in the field should be used in conjunction with other methods including but not limited to, site plans, as-builts, sanborn maps, field observations, public-mark out services, soft-digging, pre-clearing, and historical documentation of the site. No survey or survey method can accurately show an exact image of all subsurface conditions. The presence of non-detectable subsurface utilities and structures is always a risk at any site. Please take caution when proceeding with invasive work.

Soil Laboratory Analytical Reports

Technical Report

prepared for:

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Report Date: 09/26/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I1005

Report Date: 09/26/2024
Client Project ID: Remington Arms/HER1510.P2
York Project (SDG) No.: 24I1005

HRP Associates, Inc.
1 Fairchild Square, Suite 110
Clifton Park NY, 12065
Attention: Cassandra George

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 17, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I1005

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CONT	Sample was received in an improper container.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 16, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I0889

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 13, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I0791

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis

Low Bias — Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 12, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I0746

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:  **Date:** 09/20/2024

Sample and Data Qualifiers Relating to This Work Order

VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 06, 2024 and listed below. The project was identified as your project: **Remington Arms/HER1510.P2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24I0294

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By:  **Date:** 09/16/2024
