

Charge Ready Phase I Training

Business Customer Division

Safety First

- First Aid kit, CPR
- Volunteers
- Earthquake procedures
- In case of fire
- Emergency exits
- Where to gather outside

Logistics and Guidelines

- Prerequisites
 - CSBU5 Shared Folder
 - Charge Ready Program PMO SharePoint Site
 - MS Access (Charge Ready Tracking Database)
- Cell phones off or silent
- Restroom locations
- Scheduled breaks
- Attendance roster
- Parking lot for questions

ſ	<u>4</u>

Training Goal

Upon completion of this training, participants will understand:

- The Charge Ready Program processes and procedures
- How to engage the Customer about the Program
- SCE.com Landing Page and associated links
- The Interactive PDF
- The Enrollment Portal
- SharePoint site
- The Back Office System

Charge Ready Resources

- Reference Guide
- Program Fact Sheet
- Job Aids
- Sample Documents
- BCD Roles & Responsibilities

Charge Ready Program Overview

Charge Ready Program Goal

- \$22 mil. funding for deploying up to 1,500 EVSEs and conducting education and outreach
- No set duration. Expiration when funding fully expended
- Approval limited to Phase 1 Pilot; SCE must request approval for Phase 2 after deploying at least 1,000 EVSEs (between 12 and 24 months after launch)

Internal SCE Goal for 2016

• Initiate marketing efforts and gain commitments from customers for at least 500 charging stations

Program Estimated Implementation Timeline

- March 1, 2016
 - Pre-Pilot Program Kick-Off Meeting
- April 7, 2016
 - CPUC issues approval for Tier 2 Advice Letter
- April 20, 2016
 - SCE launches Pre-Pilot Program for small group of customers
- End of May 2016 (Estimate)
 - SCE launches Pilot Program for all qualified customers
 - The Pilot is a first-come, first-serve basis

Charge Ready Program Training Schedule

Three In-Person Training Sessions – based on phased database completion.

- Pilot Phase I
 - Today training
 - Follow-up Skype Q/A sessions
- Pilot Phase II
 - Date TBD ~ Early June
 - Follow-up Skype Q/A sessions
- Pilot Phase III
 - Date TBD
 - Follow-up Skype Q/A sessions

Why Charge Ready

- Program goals:
 - Support EV adoption by accelerating the deployment of charging infrastructure
 - Increase electric miles driven by EVs (and reduce PHEVs reliance on gas)
 - Reduce cost and complexity of deployment
- Deploy charging stations where mostly needed:
 - At home (MUDs), for reliable daily charging
 - At work and at destination centers, to increase electric miles and promote EVs
 - For fleet, to encourage conversion
- Focus on locations where vehicles are parked four hours or more:
 - Enough time for full recharge
 - Flexibility for time shifting
- Key exclusions:
 - DC fast charging
 - Single family residences
 - Short dwell-time locations

Deploy SCE/Customer Infrastructure – Who is Responsible for What?

Charge Ready aims at reducing the cost and complexity of deploying charging stations for our customers

Infrastructure deployed by SCE (all costs covered by the Program)

Owned and operated by participating customers (rebate against hardware and installation costs)

Customer Eligibility and Participation

Five Minute Break

Charge Ready Process Overview

Engage Customer (1)	Evaluate Potential Deployment (2)	Confirm Customer's Participation (3)	Plan and Design Deployment (4)	Complete Construction (5)	Verify Deployment and Pay Rebate (6)
1.1 Educate Customer on Program	2.1 Conduct User Survey [3 Week SLA for BCD]	3.1 Prepare Step 2 – Agreement	4.1 Develop Design (T&D and Customer)	5.1 Deploy T&D and Customer Infrastructure	6.1 Conduct Final Walk-through (Step 4 — Verification)
1.2 Provide Step 1 – Notice of Interest	2.2 Conduct Utility- Infrastructure Inspection	3.2 Present Plan to Customer	4.2 Refine Cost Estimates	5.2 Confirm Rate Plan (Turn-on)	6.2 Confirm Rebate Amount (Step 5 – Confirmation)
1.3 Assign Account Manager, as needed	2.3 Conduct A&E Evaluation	3.3 Provide signed Step 2 – Agreement [2 Week SLA for BCD]	4.3 Present Site Design to Customer	5.3 Set Meter and Energize Circuit; Pass inspection	6.3 Pay Rebate Amount
1.4 Verify Initial Qualification	2.4 Gather High-level Cost Estimates	3.4 Earmark Site Funding	4.4 Approve Pre-Lim Design	5.4 Inspect Circuit Deployed by SCE	
1.5 Conduct Overview Meeting [2 Week SLA for BCD]	2.5 Confirm Number of Charge Ports	3.5 Issue Easement Documentation	4.5 Provide Step 3 – Certification and Signed Easement	5.5 Secure Permits	
			4.6 Secure Permits	5.6 Install Charging Stations; Pass Inspection	
4 weeks	1-5 weeks	4 weeks	9 weeks	10 weeks	4 weeks
SCE Customer	Vendor	14			SOUTHERN CALIFORNIA EDISON

An EDISON INTERNATIONAL® Company

Charging Stations

- Qualified charging station include Level 1 (120v) and Level 2 (208-240v) stations.
- Level 2 stations must have communication (networking) capabilities to provide transactional data to SCE and participate in DR:
 - Level 2 "A": Integrated (i.e., all communication capabilities are inside the station)
 - Level 2 "B": Shared (i.e., master/slave station, shared gateway/kiosk)
- Charging stations are evaluated by ATO

Approved Package List (APL)

- The APL shows approved vendors, charging station models (packages), and base cost
- Maintained and updated monthly by ATO
- Located on the <u>Charge Ready</u> <u>Landing Page</u>
- The APL is <u>merely</u> a validation tool for customers when procuring charging stations (customers procure directly from vendors)
- AMs may remind customers that SCE is a neutral party and cannot provide brand or model recommendations

View >

Charging Station vs. Charge Port

Base Cost and Rebate

- The Base Cost is the best value determined by SCE for a charging station in each of the three categories (Level 1, Level 2 "A", and Level 2 "B")
- Charge Ready rebates combined with other rebates or programs cannot cover more than 100% of the EVSE costs
- Rebate amounts are available in the Approved Package List via on.sce.com/chargeready

Segment	Rebate (% Base Cost)
All segments in Disadvantaged Communities	100%
Multi-unit Dwellings	50%
All other segments (workplace, fleet, destination centers)	25%

he	Charge Port Type	Base Cost Per Charge Port	Total Base Cost Per Charging Station Package
1993 (1993) 1993 (1993)	L2B	\$XYZ	\$XYZ
<u>-</u>	L2B	\$XYZ	\$XYZ
	L2B	\$XYZ	\$XYZ

Demand Charges

All charging stations deployed through the Charge Ready Program will be served by a separately metered dedicated circuit. View the **Demand Charges Overview** for more details.

From Participation Package

Level 1 Charging stations: 120 volts, 1.4 kW **Level 2 Charging stations:** 208 to 240 volts, Usually 3.3 or 6.6 kW though some charging stations may have a higher demand

Load Management

"Load management is critical to materializing grid benefits of EV charging, and necessary to avoid any negative impacts on the grid." Charge Ready Decision, PUC, January 2016

- On-peak charging metric included in quarterly **reporting** to PUC and stakeholders
- We are mandated to **educate** our Charge Ready customers about off/mid-peak charging:
 - Lower energy costs, improved grid, and environmental benefits when charging off-peak
 - Long-dwell time segments provide ideal environment for off/mid-peak charging and load shifting
 - Available load management **options** for Charge Ready customers:
 - Send TOU signal to end users
 - Offer **lower** level charging (e.g., Level 1 at 1.4 kW or Level 2 at 3.3 kW instead of 6.6 kW); **throttle** charging level on-peak (potentially switch off charging stations)
 - Educate end users
 - Free not recommended (no price signal to end users)
