verdigris

# ver·di·gris

/'vərdə grēs/

#### noun: verdigris

a bright bluish-green encrustation or patina formed on copper or brass by atmospheric oxidation, consisting of basic copper carbonate.

Middle English: from Old French verte-gres, earlier vert de Grece 'green of Greece'.

**Verdigris** is the common name for a green pigment obtained through the application of acetic acid to copper plates or the natural patina formed when copper, brass, or bronze is weathered and exposed to air or seawater over time. It is usually a basic copper carbonate, but near the sea will be a basic copper chloride.

Alchemical symbols, originally devised as part of alchemy, were used to denote some elements and some compounds until the 18th century. Although notation like this was mostly standardized, style and symbol varied between alchemists.

### **1F728:** ALCHEMICAL SYMBOL FOR VERDIGRIS

= *aes viride*, copper subacetate

= early astronomical symbol for earth
