

What is IOT?

The **"INTERNET OF THINGS"** is a system of connected technologies which communicate via the internet.

You may recognize *IOT* in your smart-home devices such as smart security systems, smart appliances, tracking platforms such as Apple AirTags, and assistant technologies such as the Amazon Echo and Google Home. But that is just a very small part of what *IOT* technologies can accomplish.

IOT's wide range of applications means it can provide solutions to every type of problem.

Doorbells

Smart Shades and Thermostats

Voice Assistants

Security Cameras

Smart Bulbs and Dimmers

Still curious about IOT and what it can do for you?
