Can be used with registered products for agricultural, aquatic and ornamentals

GENERAL INFORMATION:

ag-300 will enhance the use of any product in a spray program. 1) Aids in the generation of smaller uniform spray droplets. 2) ag-300 resists post application evaporation of the smaller droplets and oxidation or reduction of products active ingredients. 3) It contains compounds that allow product compounds to "tag" onto ag-300 for rapid intake to the plant's system. 4) ag-300 aids in the adherence of unabsorbed product solution to treated surface areas for gradual utilization process.

For warranty information, special application instructions, and any other questions, please consult your local distributor.
