VISION 2030

Best in Class Asset Management

How NYPA uses sound Asset Management Principles
and Maximo to better Manage our Assets and
Meet the Requirements of ISO 55001

NEW YORK
STATE OF
OPPORTUNITY

**NY Power
Authority**

Who We Are

NYPA VISION 2030

STRATEGIC PRIORITIES

Preserve and enhance the value of our hydropower assets as a core source of carbon-free power and of flexibility and resilience as the state's grid evolves

Be the leading transmission developer, owner, and operator for New York State and its changing needs

Pioneer the path to decarbonization by acting as a test-bed for innovation while ensuring reliability, resilience, and affordability of the state's energy grid

Partner with our customers and the state to meet their energy goals in alignment with CLCPA¹ by providing clean and affordable energy along with innovative customer solutions

Repurpose the New York Canal System for the economic and recreational benefit of New Yorkers while driving operational efficiency

FOUNDATIONAL PILLARS

Digitization

Environment, Social, and Governance

Diversity, Equity, and Inclusion

Enterprise Resilience

Resource Alignment

What is Asset Management?

Asset Management - the coordinated activity of an organisation to realise value from assets

ASSET MANAGEMENT AT NYPA IS:

- Leveraging technology and data to better monitor asset performance
- Shared decision-making informed by data
- A focus on continual improvement
- Optimizing customer value

**NYPA supports the ISO 55001
standard for generation and
transmission**

2014

NYPA's Strategic Vision established

Asset Management Priority set

2015

Organizational gap analysis completed

Roadmap created

2016

Strategic Asset Management Plan And Regional Asset Management Plans created

Initial Asset Management Projects completed

Asset Information Strategy

	Support Document Title: Asset Information Strategy	Support Document Number: O-AMM-SD-002
		Page: 1 of 61
Title: Asset Information Strategy		
Document Type:	Support Document	
Document Number:	O-AMM-SD-002	
Revision Date:	9/7/2021	
Content Owner:	Caputo, Leonard Director Asset Information	

- **Purpose:**
 - Defines the Asset Information Strategy and requirements as well as the scope of asset information, consisting of structured and unstructured information.
- **Highlights:**
 - Vision, principles and objectives
 - Asset Information Scope
 - Current state
 - **Asset Information Needs, Opportunities and expectations of stakeholders**
 - Future state
 - Milestone activities that support the implementation roadmap
- **Subject to continual improvement:**
 - V5 approved Sept 2021

Managing our Data as an Asset

Treating data like physical assets to maximize value and drive better outcomes for NYPA and its customers

**NYPA's Enterprise Data
is growing exponentially**

Nearly 2 Petabytes by 2020

**NYPA's entire strategy & significant
investments depend on data**

Customer Digital Experience, Sensor Deployment,
Asset Performance management

**Seamless interoperability is
becoming the key to success**

Enterprise Analytics Platform,
Cloud-first Environments

Data Governance enables an organization to optimize, protect, and leverage all data as an enterprise asset. It is a system of accountability designed to enforce proper management of data assets and the performance of data functions. It succeeds by:

- Making data available and easily accessible
- Providing data transparency and traceability (knowing where the data came from)
- Keeping our data safe and secure
- Establishing consistent definition of data (especially when shared)
- Trusting the quality of our data
- Enabling automation of data processes (collection, transformation, reporting)

Quality Audit Program

NYPA has established an organizational position for Maximo Data Quality

Responsibilities include:

- Defining quality audit procedures
- Performing quality audit and reports
- Remediation and follow-up as appropriate

NYPA has developed a **Data Quality (DQ) Visualizer** tool to support data quality audits

Iterations of the tool are being rolled out on a priority basis as follows:

- MVP 1 (minimum viable product) = Asset Register **Currently in Use**
- MVP 2a = Work Orders **Q3 of 2022**
- MVP X = Consideration for systems / information beyond Maximo and SAP

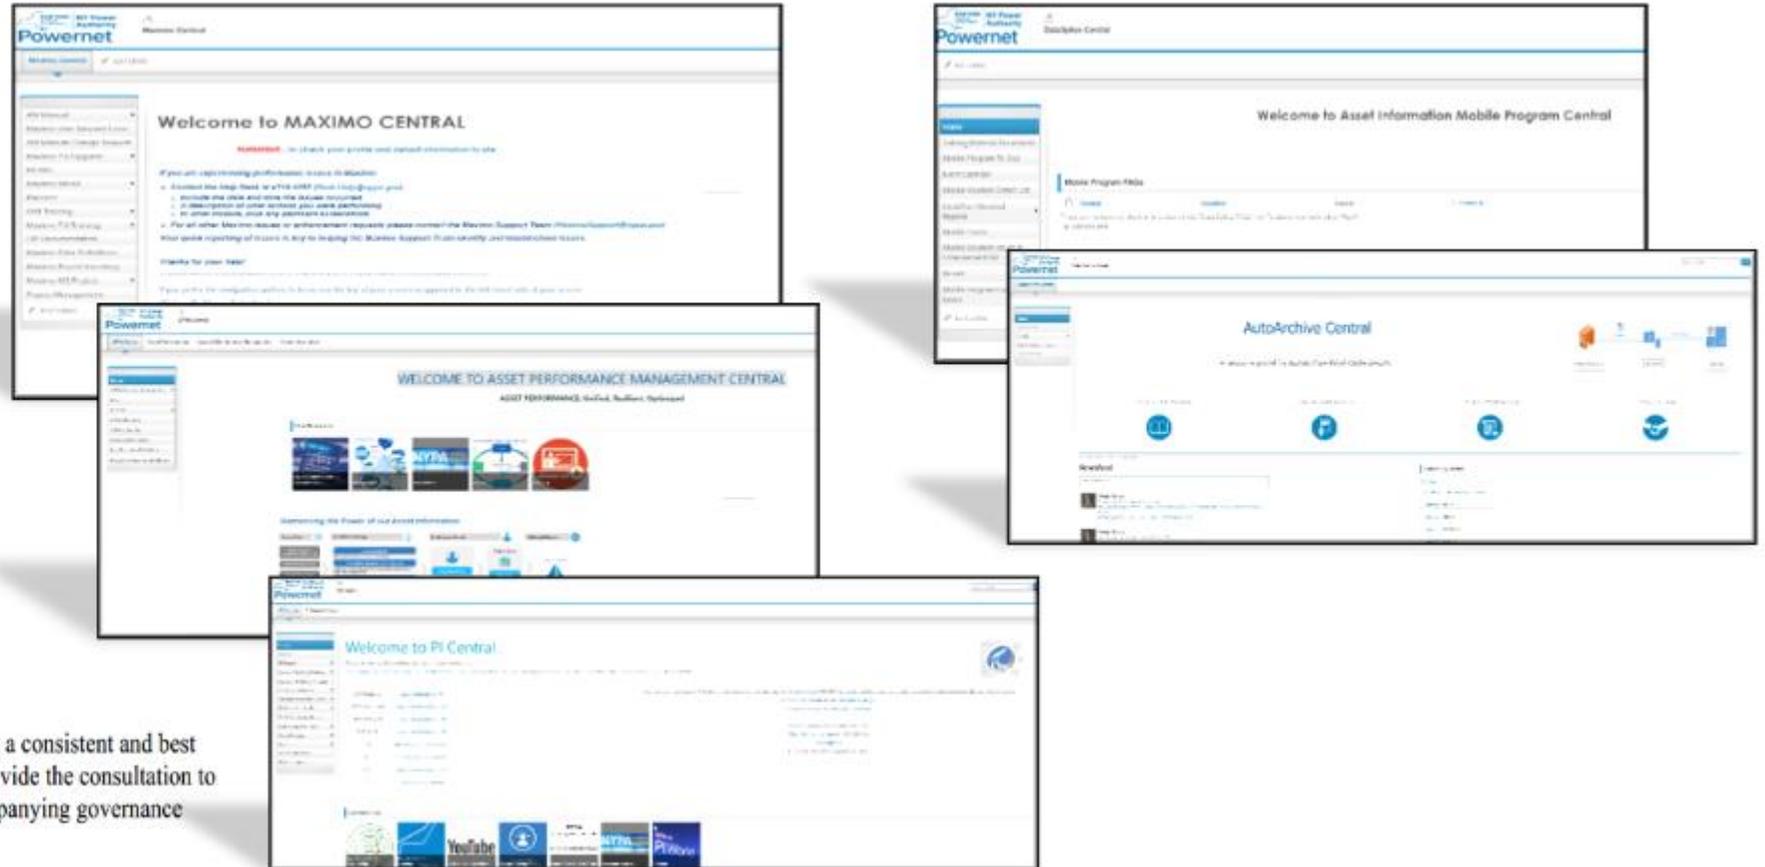

Asset Information Systems Continual Improvement

Asset Information Systems Governance

NY POWER AUTHORITY

EXELE SOFTWARE AND CONSULTING SERVICES

PI SYSTEM CONSULTING SERVICES

II. Summary of Proposed Services

In response to the NY Power Authority's requirement for implementing a consistent and best practice approach to the usage of its PI System, Exele is prepared to provide the consultation to help define an enterprise-wide PI System solution and create the accompanying governance structure (policies, procedures, and supporting process flowcharts).

Create an Asset

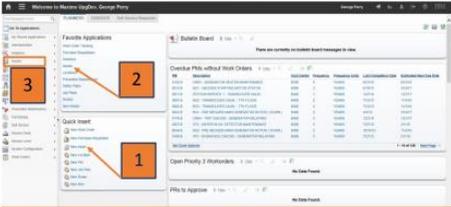

An **Asset** is any piece of equipment or apparatus that requires history of maintenance, inspections or testing in order to comply with asset management / NYPA policies, external regulations, or has associated spare parts.

An Asset must be created in Maximo in order for Labor or Materials to be charged against it.

Note: If the new Asset has a **Microprocessor**, it may be a **CIP Asset** in which case, a different process will be used to create the Asset. Please seek guidance as to whether the Asset falls into this category and use the **"Create a CIP Asset"** Quick Card to complete the process.

To Create an Asset:

- 1) Open Maximo and Go To **Assets / New Asset**.

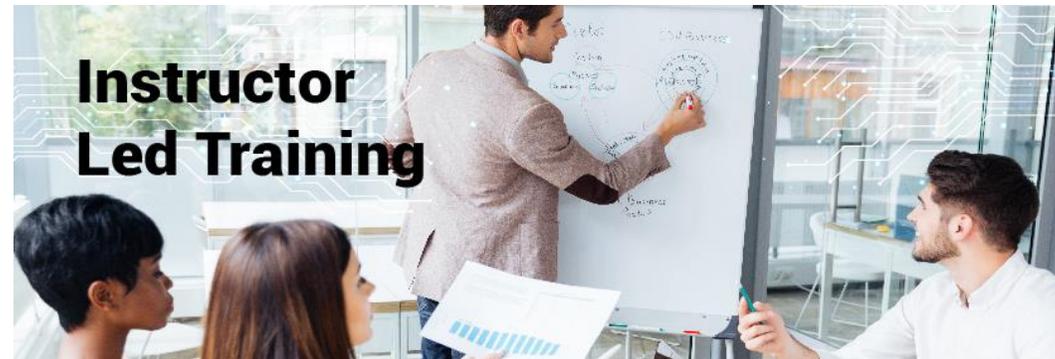

The Assets application is accessible in Maximo in one of three ways:

- 1) If the **Quick Insert Portlet** is installed and there is a "New Asset" option available, select New Asset. This will take you directly to the new asset page (skip step 2).
- 2) In the **Favorite Applications Portlet** select Assets.
- 3) Go To > Assets > Assets

Selecting a GL Account when Creating an Asset

A general ledger (GL) is a set of numbered **accounts** a business uses to keep track of its financial transactions and to prepare financial reports. Each **account** is a unique record summarizing each type of asset, liability, equity, revenue and expense.

In **Maximo**, you can set up **GL Accounts** so that they correspond to accounts that are used in our business accounting system. **GL Accounts in Maximo** are the method by which all expenditures for an asset are tracked. This includes items like spare parts, materials, and labor. In order for this information to be accurate, it is critical that these expenditures be charged to the correct GL Account.

When creating an asset, the GL Account is a **Required Field** signified by a **Red Dot**. To populate this field, click on the **Select Value** icon.

GL Account:

Note that the unaltered GL Account looks like this:
 ? - ????????????????????

If entered improperly, this is what the GL Account will look like in the GL Account field on the asset record.

The GL Account must be selected using the following method:

Select the **"P"** under the **GL Component Value** field. This does two things:

- 1) It changes the first character in the GL Account from a **"?"** to a **"P"**.

GL Account: **P**- ????????????????????

Segment: WBS ELEMENT

- 2) It opens the menu from which you may choose the remaining component value of the GL Account number.
