

Decision Making Under Pressure-Talk

Making decisions is a fundamental skill for leaders. But what if you don't have all the information? What if you need to make it in a split second? Can you justify it? Do you have a process that helps?

Based on over a decade as a frontline police officer and a professional football referee, Chris has created a decision making model that brings clarity to the uncertain moments. Where you can justify, implement, review and stay composed in the trickiest of circumstances.

Key messages:

- 1- Decision making is an art form. To make it look natural, you need a framework to work with
- 2- Sometimes you make decisions with the information you have- not the information you need
- 3- A practical model based on policing and professional refereeing

Some practical information:

- 1- Between 45 and 60 mins and can be delivered in person or virtually
- 2- Aimed at business leaders, people managers and all employees
- 3- A cheat sheet with the decision making model shared as a resource
