

## Crystal Water Products CWP-TRO-600

The CWP-TRO-600 RO system has superior filtration. Two composite filters reduce most contaminants.

With a fast and stable water flow rate of 600 GPD.

The CWP-TRO-600 reverse osmosis system produces less waste water, dispensing 2 cups of pure water will produce only 1 cup of waste water.

This smart RO system has filter life indicators, which will remind you to replace the filter in time, so that you're water stays fresh, along with a built in TDS Display.

**Reduce-** Rust, sediment, suspended solids, and other large particles.  
Chlorine, organic matter, taste and odor.

**0.0001-micron high-precision reverse osmosis membrane:** Reduces TDS, lead, salt, PFAS, etc.

**PET pleated membrane:** Further filters out large particles.

**Why do you need a reverse osmosis system?**

Your drinking water may be contaminated by an unclean water source or tap water. Drinking unclean water for a long time will affect your skin, digestive system, teeth, nervous system, etc.

The RO membrane has a pore diameter of 0.0001  $\mu\text{m}$ , which does not allow large molecules or ions to pass through. Therefore, it reduces most contaminants in water.
