

ARE YOU SLEEPING

ACKNOWLEDGEMENTS

First of all I shall always be eternally grateful to Ole Howard, who sadly died in May 1989. Ole, a Danish dentist and former M.P., was the first to take the mysterious Gipsy Hill Gipsy for me. His enthusiasm has not only saved countless of lives but also encouraged me to investigate further and write this book.

IN A

I am also grateful to David Brown, the Boy and Roger Koe, whose knowledge and enthusiasm has helped me immensely. She is now head of the American Society of Doctors School, for allowing part of his book. I have also been helped by other people from all over the world for their encouragement, advice and help, and last but not least, for my staff, for their patience, understanding and help in producing this book.

SAFE PLACE?

This 7th edition has again been updated and based on the correspondence, scientific evidence and knowledge from thousands of people. I have also revised the book and my own experience from having now checked over 24 years. This has also helped to make my book. I have also revised the book and my own experience from having now checked over 24 years. This has also helped to make my book.

7th EDITION

DULWICH HEALTH
130 Gipsy Hill, London SE19 1PL

DEDICATED to the memory of our son Mads, who might not have died if I had known about Geopathic Stress at the time of his illness.

ACKNOWLEDGEMENT

First of all I shall always be eternally grateful to Ole Hovmand, who sadly died in May 1989. Ole, a Danish dentist and former M.P., was the first to take the mystique out of Geopathic Stress for me. His enthusiasm has not only saved countless of lives, but he encouraged me to investigate further and write this book.

I am also grateful to: David Brownie, Ilse Pope and Roger Rose whose knowledge and enthusiasm has helped me immensely; Sig Lonegran, former head of the American Society of Dowser School, for allowing part of his book to be included in my text; Kathe Bachler, who has been an enormous inspiration and who taught me to dowse for 'good places'; numerous other people from all over the world for their encouragement, advice and help; and last but not least, for my staff, for their criticisms, interpretation and help in producing this book.

This 7th edition has again been updated and based on the continuous, constructive criticism and knowledge from thousands of people who have read these previous editions and my own experience from having now checked over twenty thousands of cases of Geopathic Stress over 24 years. This has also helped to make my book, in the opinion of others, the most detailed and comprehensive book on Geopathic Stress ever published.

PREFACE

In January 1984 our son of 26 was diagnosed as having cancer of the testicle (Teratoma type tumour). Even though the cancer was well advanced, Chemotherapy treatment drastically reduced the cancer count in his blood over the next few months and his doctor was very optimistic. He then went to live in a delightful old cottage in Leeds, but over the next few months his count went up again.

One day in mid 1984, a health practitioner, familiar with dowsing, visited the cottage for the first time and was shocked to discover a very strong underground vein of water - which causes Geopathic Stress and is very detrimental to human health - running directly under our son's bed. She persuaded him to move out of the cottage within hours. Unfortunately his cancer had by then spread to his liver, and even though he survived a major operation, he was too weak to survive the next vital chemotherapy session and died in early 1985.

It was only after his death that I realised the harmful effect the Geopathic Stress, caused by the natural vibrations from inner earth, which have been distorted underground, must have had on my son's health, and I immediately decided to investigate. I found to my astonishment that considerable research had been carried out in Germany over 80 years ago, which supported the theory THAT ONE IS UNLIKELY TO DEVELOP CANCER UNLESS ONE HAS SLEPT OR STAYED FOR LONG PERIODS IN GEOPATHIC STRESS PLACES. One doctor, Dr Hager M.D. of Stettin, has found the theory borne out in 5,348 cases.

Why, I ask myself is so little known about the harmful effect of Geopathic Stress on our health? The answer must lie in the mystique surrounding Geopathic Stress, the difficulty in measuring it, the scarcity of published evidence in the English language and the consequent refusal of literally minded people to believe in such phenomena and because few people are aware of the dangers or can locate Geopathic Stress accurately. However since publishing the first edition of this book over twenty four years ago, I estimate, over two million more people world-wide now recognise Geopathic Stress is the only common factor in most cases of serious and long term illness both physically and mentally and when babies are born with defects. Hundreds of thousands can now locate the Geopathic Stress themselves.

In this book I will show you in easy stages how to locate Geopathic Stress lines with a home-made device made in minutes and costing nothing. I will also describe how your own body can tell you if you are in a good or bad place and if you have Geopathic Stress.

Billions of pounds are now spent each year in UK alone implementing the thousands of new regulations, often very trivial, agreed by the European Common Market for the sake of safety, hygiene and health. Yet not one pound is used by the authorities to ensure people lives are not put in far greater danger and their lives made miserable by preventing their immune systems being badly affected by Geopathic Stress.

Geopathic Stress has become many times stronger over the last few years causing an increase in cancer and other long term serious illness such as Multiple Sclerosis, Lupus, Parkinson's, Alzheimer's, Dementia etc. You do not get these illnesses by chance yet 42% of people believe so.

However I do not underestimate the continuous effort involved in spreading this vitally important knowledge, but with your help it can be achieved. Our son, a true Queen's Scout, studying for his finals as an accountant, and about to get married, MUST NOT HAVE DIED IN VAIN.

I am very grateful no effort or money was spared in trying to save my son's life - it must have cost the NHS in today's money £250,000 - so just think what the nation could save if the contents of this book could be acted upon by everybody and thereby help prevent thousands falling seriously ill each year.

Rolf Gordon
September 2014

It's only the money !!!

INTRODUCTION TO GEOPATHIC STRESS

It can be very hard for the modern, well educated, pragmatic person to understand that there are disturbed vibrations coming up from the earth, which can be harmful to our health.

We have lived with the natural vibrations which rise up through the earth's mantle for millions of years. When these vibrations encounter subterranean running water, certain mineral concentrations, fault lines and underground plateaux and cavities, their natural vibrations become distorted and harmful to living organisms. In the case of running water, normally 200 to 300 ft. (60 to 90 meters) underground, an electromagnetic field is created in the opposite direction to its flow by friction which then increases these beneficial vibrations passing through by up to 30 times. Surface water does not normally create stress.

The effect of these higher vibrations has been called many names such as black streams, cancer rays, negative green rays, Hartmann and Curry lines and even ley lines. However, over the years I have persuaded most people to call them - Geopathic Stress (Geo from the Greek word for earth and Pathic from the Greek word pathos = to suffer, cause disease). This is the name now used in most languages all over the world.

The Chinese knew the harm Geopathic Stress (GS) could cause over 4000 years ago and avoided building houses on stressful places. Often people could be punished if the building was on what they called 'dragon lines'. On his travels Sig Lonegren has dowsed hundreds of ancient sites, but has never found GS under any inhabited site of any people whose culture was obviously working with Earth Energies. From a Neolithic (New Stone Age) village in Orkney, through many Bronze Age hut circles in Dartmoor, to American habitation sites of the Adena and Hopewell people and the homes of the Inca residents high in the Andes, the inhabitants never built their homes over these life destructive high vibrations.

THE VIKINGS

It has often been asked why the Norsemen or Vikings became such a healthy race making Denmark and southern parts of Norway and Sweden overpopulated and enabled relatively small numbers of people to colonise and rule much of north Europe for over 200 years from 800 AD onwards; they influenced craft, trade and law (Danelaw) for many more years. The Vikings also explored and traded as far as the Middle East through the Mediterranean and along the Russian rivers and North America from Greenland. In 1066 William the Conqueror and his hired mercenaries - the Vikings who had settled in Normandy (Norsemen) - beat King Harold II. The Vikings had already settled in Ireland, Scotland and Northern England.

I am convinced one of the main reasons why the Vikings became such strong people was because they knew how to neutralise, the part of the country they lived in, of unhealthy Geopathic Stress, by placing Dolmens in exact triangle patterns. The Dolmens were burying mounds. Normally there are three large standing stones with an extra large stone resting on top, which was lined up exactly with the other two top stones in the triangle. More than 40,000 were arranged in Denmark. Over 400 were placed just around the strongly populated area of Birka in south Sweden. By dowsing it has been found that the Dolmens attracted Geopathic Stress and the area in between was neutralised. It is true many Dolmens were used for burials, but then you do not normally place graves far apart in patterns all over the areas you populate. Some experts can neutralise large areas by lining up stones on earth mounds in squares or triangles using Yin and Yang (or male and female) stones. No doubt this was the original reason for placing large corner stones in building. The Vikings became Christian around 1000 A.D. and people were no longer buried in.

Dolmens, so many were broken up and used as building material for roads and buildings. Even though there are still thousands of Dolmens today, the neutralising pattern has been spoiled and the descendants of the Vikings all over northern Europe became indistinctive in health from the people they had integrated with.

Why has the modern man not learned from his ancestors how to use his natural powers to detect and protect himself from Geopathic Stress?. And why do most people in the medical profession still not believe in Geopathic Stress?. The two main reasons are due to beliefs and detection.

BELIEF

Quite rightly we have a lot of faith in orthodox doctors, but most are overworked and have no time to learn and understand treatments not involving drugs and surgery. Let me give you an example:

Earlier in 1990, after a lot of pain and an ultrasound scan, I was diagnosed as having my gall bladder blocked up with stones and the only treatment recommended by my doctor was an operation, which would cost me or the N.H.S. about £2,000, plus 6 weeks off work for the operation and recuperation, also much discomfort. Looking for an alternative treatment, I found a well-published description of a Gall Bladder Flush and I decided to try it.

I drank plenty of apple juice over 6 days and ended up drinking a cupful of olive oil and lemon juice*. I did not feel a thing during the night and next morning passed about a hundred green stones, which had been softened by the apple juice to such an extent, that you could squash them in your fingers. Apparently, this simple and easy treatment (which cost me £10 in apple juice) has been tried successfully by thousands of people, saving major surgery (even keyhole surgery or crushing the stones by ultrasound is not without risk and not always possible). The saving to the N.H.S. and patients by using the Gall Bladder Flush would be enough to build and staff an extra hospital in the U.K. each year. BUT my point is, if doctors do not heed and believe in this easy cost-saving treatment, how do you expect them to believe in Geopathic Stress?

DETECTION

Up to now, even expensive instruments have not proved as consistently reliable, accurate, sensitive nor as quick as a human dowser in detecting GS. All scientists measuring with instruments will dowse first - or take a dowser along - to locate the GS lines initially.

Goethe remarked: the human being himself is the best physical apparatus in existence.

DOWSING

The ancient art of dowsing has been misunderstood and condemned throughout history, mainly because it could not be explained how by dowsing one could find out in great detail about people and places. Very often distances made no difference.

The 'Caves of Tasseli' in the foothills of the Atlas Mountains, which were discovered in 1949, contains prehistoric cave murals, one of which depicted a dowser surrounded by his fellow tribesmen dowsing for water. These paintings have been proved to be at least 8,000 years old by the carbon 14 process.

There is no doubt Moses was a skilled dowser (see Exodus 17:5-6 and Numbers 20:10-11) and the Chinese Emperor Tu in 2200 B.C. is pictured with a divining rod. Dowsing was known everywhere in ancient times by the Egyptians, Hebrews, Persians, Druids, Greeks, Romans, Hindus, and the American Indians. Very little is mentioned of dowsing by ancient

scribes and historians as this art was a powerful and well kept secret by the Temple priests. The Egyptian Queen, Cleopatra, had at least two dowzers with her at all times, not looking for water, but for gold. Druids no doubt dowsed for the correct site for Stonehenge and personally I have found underground water streams crossing exactly North South, East West at the centre of nearby Woodhenge.

Many in the medical profession and all major religions have now accepted dowsing as long as it is for the good of mankind, and so it can be in many ways.

Dowsing for water has been the most acceptable way of dowsing for thousands of years. Brother James Kimpton uses dowsing for drilling water wells in parts of India suffering severe drought. He found his success rate was better than 90% as against the governments success rate of a mere 30% using geophysicists. It only costs £100,000 to drill deep bore wells (average depth 160ft) and install 191 hand pumps in 112 villages suffering from four years of drought and thereby preventing thousands of people leaving their villages in search of water. The dowser can tell where the stream is, at what depth (usually to within a few inches), if the water is sweet (suitable for drinking) or brackish - and how many thousands of litres per hour.

Make sure the person dowsing knows what they are doing

Dowsing for health enables Medical Practitioners to determine and locate illness and disease and select the most suitable form of treatment and remedy. Homeopaths are far more accurate in pinpointing the correct remedy and strength when supplementing their knowledge with dowsing. One hospital doctor did not reveal his profession, when visiting Practitioner Jorgen and said after he was given a complete check-up by dowsing in 15 minutes. "It is amazing, your diagnosis is 100% accurate and has taken many years to find out from my medical colleagues". Jorgen had often advised patients he could not help to go to their hospital to get a particular health problem sorted out. The doctors have admitted they were thankful not having to waste time carrying out lengthy tests, but just had to confirm the diagnosis carried out by dowsing.

Save millions of dollars.

Dowsing for safety in checking food before buying in the shop. Eggs can be checked for salmonella, on the outside of the shell, certain soft cheeses for listeria, tinned tuna for mercury and you can check to see if the meat etc. in the fridge is still safe to eat. This is apart from checking if certain foods, drinks and medical drugs are good or bad for you, which vitamins and minerals to take and what quantity. Watch out, your body may accept or need something one day, but not another day. One mother with a 14 day old baby found her baby vomiting after each breast feed. I dowsed, the mother should stay off tomatoes and bought-in fruit juices. Three months afterwards the mother reported that the baby had vomited only once - she had some tomato purée that day. In another case I dowsed the correct brand of milk powder, which would not upset the baby. In several cases I have advised people to change their brand of washing powder to stop them getting rash on their skin from the powder still in their clothes or waking up with a headache due to the trace of the washing powder still in the bed linen.

grounded means in tune with the earth.

Our person NOT contaminated by others!

ALL should be grounded

Dowsing for illegal Drugs Why don't Customs & Excise and Airport Authorities employ experienced dowzers to check for hard drugs, weapons and bombs in luggage in addition to present methods of checking? Just think of the increased success rate if a dowser is only 50% accurate.

Dowsing areas for Geopathic Stress can be learnt in a matter of minutes even though some dowzers tell you it will take years to learn. Many who did not even believe in dowsing or Geopathic Stress found to their astonishment that they could dowse immediately. The simple

for 80% of people - you must be grounded

method of dowsing with rods is explained later.

Dowsing using the muscle test and pendulum is also fully explained later.

Charles Richet a French Nobel Prize winner, sums it up by saying 'Dowsing is a fact we must accept'.

Early cultures did not necessarily use tools for dowsing. Ancient people had probably developed the ability to 'sense' the stress lines, just as many people today can dowse with only their hands or can 'see the Geopathic Stress lines'.

Maybe you have already felt the presence of Geopathic Stress. Have you sensed immediately you enter a house for the first time that it is uncomfortable, depressing crowding in on you, or feels 'dirty'. Most likely it is Geopathic Stressed and the unpleasant, irrational feeling you have is apparently a relic of a survival mechanism. On the other hand, houses free from Geopathic Stress feel happy, nice and 'clean'. One boy said 'a feeling of honey'.

Many modern engineers, council workers, etc. find it a waste of time not to dowse for 'lost' pipes, drains and cables on building sites. One company who drills for water boreholes has, over many years, guaranteed to make 'no charge' if they had not found the water, as indicated by dowsing, at the correct depth, correct flow and suitable for its purpose. Not once, in over 500 cases, have the customers refused to pay him.

Dowsers are now employed on a permanent basis by the Canadian Ministry of Agriculture, U.N.E.S.C.O., all major U.S.A. water and pipeline companies and the Czech army. U.S. marines in Vietnam were trained to dowse for booby traps, ammunition dumps, tunnels and sunken mortar shells. Thames Water now uses dowsing with great success to find burst water pipes.

phone or hydro lines, septic tanks & beds, gas lines etc.

In 1959 Verne Cameron, a Californian dowser, demonstrated to the amazement of Vice Admiral Maurice E Curtis and his fellow officers in the U.S. Navy, that he could accurately locate the position and depth of submarines in the Pacific and distinguish between American and Russian submarines. Years later when Cameron applied for a passport he was refused as the Navy had contacted the C.I.A. who considered him a security risk.

Such companies as Bristol-Myers, Du Pont and R.C.A. have saved money in locating adequate sources of water. Roche, the international pharmaceutical producers, who always use dowsers to search sites for the vast quantities of water needed in chemical production, when questioned on the unscientific value of dowsing replied: 'We are not concerned with scientific status, only with results - and dowsing for water is 100% reliable'.

When you buy a flat or house you have the property surveyed in order to find out if there are hidden structural defects - but do you survey the property to see if it has hidden 'health hazards'? Geopathic Stress could make certain parts of the property unhealthy to sleep or work in, or at worst, the property could prove totally unsuitable to live in. One house I came across had changed hands four times in one year due to being badly affected by Geopathic Stress. Can you afford to take a risk with what may be the biggest investment of your life? AND what about your biggest assets - you and your family?.

When you buy a car you are normally allowed to test-drive it. Some new cars, you can even change out within a month if you are not happy with it.

Why do you not insist on sleeping a few nights in a house you propose to buy, before you sign the contract?

Maggie A. who telephoned me, moved from a 'good' house to a very Geopathic Stressed one. From the very first night she felt dreadful and was often in tears during the day for no apparent reason. If only!

Geopathic Stress is very often the cause of a stressful atmosphere in an office, preventing people getting on with one another and causing them to feel worn out by the end of their working day. It is very important for all people in charge of business to understand Geopathic Stress, which prevents employees and the boss being on top form. See details on Sick Building Syndrome page 64.

YES
Mr Aake Lingren, an engineer and a famous Swedish dowser, says he has yet to meet anyone who has become seriously ill without discovering their beds stand in GS places. He believes it is stupid to buy or build a house without first checking the ground for Geopathic Stress. Some building plots prove completely unsuitable to build on from a health point of view. Several large building projects have, in fact, been cancelled after strong Geopathic Stress was found on the sites. One famous dowser, and I agree, estimates 1-2% of all dwellings are completely uninhabitable, and about 22% have some Geopathic Stress. I did a survey of several hundred houses and flats that were for sale, and found 35% were Geopathic Stressed and 11% very badly stressed. This is well above the average and shows people are more likely to sell a stressed home they feel uncomfortable in even though they have never heard of Geopathic Stress.

Some German builders employ dowsers and give a guarantee that all essential rooms are free from Geopathic Stress. In parts of Austria planning permission will not be given for many types of building sites unless the plot has been dowsed for Geopathic Stress.

Many plots of land, which people previously knew were not suitable to be build on, due to GS, were used to build workhouses on during the 20th century. When there was no longer a need for workhouses at the beginning of the 21st century, they were often replaced with a prisons, hospitals or schools - you can draw your own conclusions.

X Dr F.S. Andersen, who is in charge of a cancer clinic, arranged for a dowser to search the homes of his 300 cancer patients. The results were quite a shock to him. ALL the patients, without exception, had been sleeping for a short or long time over strong GS lines. Dr Anderson is 100% convinced that the connection between the Geopathic Stress and illness is a real one. He has many cases of cancer and rheumatism where a dramatic improvement has occurred just by moving the patient's bed a metre or two. X

It is not usually possible to influence the behaviour of animals, plants and babies but Geopathic Stress has an effect on animals, who either move away from GS affected areas, (i.e. dogs) or some (cats, bees and ants) actually prefer these places. I have seen many cases where ants have made their nests just where a GS line comes out from a house and far away from a kitchen or other source of food. Also, when rays have been neutralised from a house, the ants have not always returned. It was also known long ago that sheep do not like Geopathic Stress, so people drove sheep out onto potential building sites, and it was considered a safe place to build a house where the sheep lay down to sleep. if they can

Plant growth is also affected; fruit trees bloom but do not bear fruit, cancerous growths occur on tree trunks and trees show poor or twisted growth. In one case on the west coast all the trees were bent to the east because of the western wind - except one tree which stood upright, because it was found a GS line was just crossing the tree on the east side and its struggle to avoid the GS made it overcome the western wind. If GS lines run through a clamp where the farmer keeps potatoes etc. during the winter, the potatoes above the GS lines will most likely rot. On the other hand, this is an ideal place to put a compost heap.

Babies, too young to walk, move themselves to any place or position however uncomfortable, to avoid sleeping over a GS line. crib deaths if the baby can't move

These are further proofs that Geopathic Stress exists and affects all living matter.

GYPSIES on the move seldom get chronic illness. Christopher McNaney of the People's Research Centre, Alston, carried out an illness and lifestyle survey amongst 175 gypsy families, who were on the move continuously, rarely staying in one place for more than three weeks. McNaney found less than 1% of them suffered from cancer or knew of any cases amongst parents, grandparents or other relatives. Set beside national figures, which show that about one in four people die of cancer, this was almost unbelievably low.

The gypsies continue in their old habits, they smoke, drink lots of alcohol, use sugar and salt freely, and don't bother with exercise or special diets, yet they not only avoid cancer but also other serious illnesses. McNaney reckons the survey provides support for the theory that "cancer is primarily a disease of location". Not only do Gypsies have a feeling for places that are free from Geopathic Stress, but should they pick a bad spot they don't stay there long enough for it to harm them.

THE CHURCH'S ATTITUDE TOWARDS DOWSING

Unfortunately Martin Luther condemned dowsing, even though his father was a miner and no doubt used dowsing to find coal seams, as was common practice in the 16th century. The medical profession soon joined with the Protestant church in persecuting dowisers, as their skill was a threat to doctors and claimed to be a craft practised by witches, of which two million were killed in Europe. Only dowsing for water was accepted, as this was considered essential for human survival.

Many people still consider dowsing is taboo on religious grounds due to Martin Luther, but most religions have accepted dowsing now for the good of mankind.

It was decreed by the Catholic Church on 26 March 1942 that if a Christian wants to do God's will and help himself and others by dowsing for water and examining homes, then this work is blessed by the Church. However, the Church warns people not to use dowsing for evil or solely for gain, but only for works of love. It is the human right to have pure air, healthy water, unspoilt food as well as 'good places' to sleep and work in, free from Geopathic Stress.

ALBERT EINSTEIN SAID

"I know very well many scientists consider dowsing as they do Astrology, as a type of ancient superstition. According to conviction this is, however, unjustified. The dowsing rod is a simple instrument, which shows the reaction of the human nervous system, to certain factors which are unknown to us at this time."

Someone amongst your family and friends is most likely to be affected by Geopathic Stress - an estimated 12% of people are permanently affected (over 6 million in UK) and 20 % in their workplace - so you owe it to yourself to read on!

OPINIONS OF SOME MEDICAL DOCTORS

ERNST HARTMAN M.D. said that in 30 years of practice, he has not come across a patient with cancer or otherwise seriously ill - with the exception of disease caused by bacteria or virus infections - who has not slept or stayed for long periods in GS places.

JOSEF ISSELS M.D. wrote to his colleagues that it is the duty of doctors to inform their patients of the dangers, if they stay for long periods in GS places.

DIETER ASCHOFF M.D. told the Puchberg Medical Conference that he had achieved astounding results by relocating his patients' beds. It is his opinion that doctors need no longer be afraid to discuss GS with their patients, as all the experiments conducted over the years have made the phenomenon general knowledge in Germany. He maintains that the welfare of the patient is the doctor's first and most important consideration.

ROBERT STEIDLE M.D. feels strongly that when patients can be helped by simple and harmless measure, by moving their beds away from GS, then this constitutes true progress.

* ARNOLD MANNLICHER M.D. thinks that cancer is a disease of location. He wrote in a Swiss medical journal that in 30 years of practice, he has not yet found a case of cancer where there was not a GS influence. *

DR. RAMBEAU M.B. says that a house built on neutral ground and still producing cancer does not exist.

PROFESSOR J. GRAZ M.D. recommended a change of bed position to those patients who did not respond to his medical therapy.

DR. HANS NIEPER. The renowned cancer specialist wrote in his book 'Revolution in Technology, Medicine & Society', he states 'According to studies I have initiated, at least 92% of all the cancer patients I have examined have remained for long periods of time - especially in respect to their sleeping place - in Geopathic Stressed zones. This does not necessarily mean that the Geopathic zone, produces cancer, but rather it is the ultimate push button that makes the thing happen!'

When President Ronald Reagan was diagnosed with cancer in the 1970s, Dr. Nieper discovered that Reagan was sleeping in a very Geopathically Stressed place and ensured that his bed was moved into a GS-free place in the White House. Dr. Nieper also treated Reagan with hyperthermia, where cancer cells are exposed to a very high temperature. The treatment together with GS free was so successful, that Reagan went on to live for another 15 years and did not die of cancer. As no orthodox medicine was involved, the press in the USA was never allowed to report the reason for the success.

* One doctor even claims that all his patients are affected by Geopathic Stress, except in cases of accidents, otherwise they would not be patients.

Numerous medical doctors now think that medical books should be rewritten in the light of all that has been learned from investigations over the last 80 years on the phenomenon of Geopathic Stress. These enlightened doctors make it a routine to examine the sleeping places of their patients.

Many sick people are asking 'Why don't doctors tell us about Geopathic Stress?'

SCHOOLGIRL LINDA AND LEUKAEMIA

15-year-old Linda had felt unwell for two or three months and had been sick many times without any apparent reason. On 27th February 1984 her schoolteacher took her to her G.P. because Linda was so pale and almost fell asleep in class. The same day, Linda was admitted to hospital and her parents were informed the next morning that Linda had one of the most serious types of leukaemia, which attacks the bone marrow.

Within a week, the first chemotherapy treatment was started, which produced a strong and unpleasant reaction in Linda, and her progress was slow.

In June 1984, it was decided to try a bone marrow transplant and luckily, Linda's brother was found to be a suitable donor.

In July 1984, after a week's preparation with chemotherapy and radiotherapy, Linda was injected with over half litre of bone marrow and had to spend one month in total isolation.

The side effects of the bone marrow transplant were many and severe and only after some months in hospital, could Linda go home in November 1984.

For the first few months back home, Linda slept in her mother's cosy bed and her health improved from week to week. At the beginning of March 1985, she moved back into her own bed.

Linda had a routine hospital check-up at the end of March, which alarmingly showed the leukaemia might have broken out again, even though tests had shown Linda was free from cancer when she left hospital in November 1984. The doctors were very worried and planned an early meeting with Linda's family.

This was all a great shock and when one of Linda's mother's colleagues at work heard of it and said that although it might sound fantastic, perhaps Linda's bed was in a GS place.

Linda's mother had never heard of GS but was desperate enough to try anything that might save her daughter's life and thought a survey could do no harm. A dowsing investigation showed two GS lines did indeed cross under Linda's bed. The dowser said 'Linda just could not have slept in a more unfortunate place'. This was in April 1985. Linda's bed was moved the same day.

Linda told how during the few weeks since she had moved from her mother's bed into her own bed, she had felt tired, unwell and had pins and needles all over her body.

On 15th April, Linda again had a check-up at the hospital and the tests showed Linda had no problems and the planned meeting to decide further treatment was cancelled.

Linda became a transformed person. Her need to sleep was reduced to normal, she didn't feel tired in the morning and the terrible pins and needles had disappeared. In May 1985, one and a half months after her bed had been moved out of GS, she was up early every morning to deliver newspapers. She became very industrious with her school work, spent 4 hours a day looking after her pony, cleaned and did gardening for an invalid lady once a week and did the occasional baby sitting job.

A fantastic improvement has taken place in a girl who, only six months earlier was bald and had become so weak that she had to be carried around and in whom only one and a half

months earlier, leukaemia was about to break out again. By what seemed a miracle, Linda's health improved - and very quickly - after her bed had been moved away from an area affected by GS.

Linda's parents relate how they had considered buying another house in the district, but asked the dowser to survey the house first. The result showed the house had so many GS lines passing through it, that it was practically impossible to live in. In future, they will never buy a house or flat before they have had it dowsed and are sure that it is safe to live in.

It is now almost 30 years ago since Linda escaped cancer and it now, in her forties and a very healthy woman.

Never build a house without checking the bare lot FIRST!!

S = Strong GS Lines

VS = Very strong GS lines

Also make sure your beds have the headboard NORTH when you plan the home

GEOPATHIC STRESS LINES THROUGH LINDA'S BED BEFORE IT WAS MOVED

SIMONE WAS NOT SO LUCKY

For half a year, nine-year-old Simone's temperature had been high. She had coughed a lot and had difficulty in breathing. She had seen her doctor many times, who each time had said her ill health was due to a virus.

In February 2000 Simone had a scan, which confirmed she had a cancerous tumour, bigger than her lungs, on her left lung. She had six chemotherapy sessions in total. After the second chemo session, the doctor confirmed the tumour had shrunk to half its size.

During the next six months Simone had some good days but she also had periods of high temperature, infection, antibiotics and stays in hospital. She almost died of bacteria in the intestines. She lost her hair, her cheeks were swollen due to her medication and her food was fed through a tube directly into her stomach.

Simone had a 10x10 x5cm tumour operated away, followed by bone marrow transplant. She almost gave up the will to live, but managed to pull through. Simone asked her mother one day "if you knew I was going to have this 'silly illness', would you then have killed me?" After her mother had assured her she would not have done such a stupid thing, Simone said "I would have thrown myself in front of a car, if I had known"

Eventually, the family was told the cancer had gone. However, on the 7th of January 2001, Simone's temperature shot up and in hospital it was confirmed she had pneumonia. Soon afterwards it was also confirmed the cancer had come back and there was no more the doctors could do.

Simone died just before midnight on the 12th of January 2001.

This was Simone's bed at home, showing two very strong Geopathic Stress lines through it. Even the hospital bed she died in was in a very Geopathic Stress place.

Unfortunately, Simone's parents were never told about Geopathic Stress. They had a very hard time getting over their daughter's death. Luckily enough, Simone's older sister Stine and the sister and brother born after Simone's death, are sleeping in Geopathic Stress-free places.

Simone's bed

LUCKY EDWARD

Twelve-year-old Edward Chapelow had a non-operative tumour as big as a melon on his gut. His bed was found to have two strong Geopathic Stress lines across his stomach. His bed was moved into a safe place. Edward had chemotherapy and soon the tumour shrunk to a size of a lemon and eventually vanished altogether. It was confirmed, he no longer had cancer.

Doctors agreed the chemotherapy Edward was having at the time, would not have made his tumour vanish. Was it a spontaneous remission, which doctors believe it was, or was it due to Edward was no longer Geopathically Stressed?

During the last two years when Edward has been back in Hospital to confirm he has no cancer, he met the group of children he was with when he first went to the hospital. They were still having chemotherapy! Edward is now a strong member of his school's Rugby team.

Geopathic stress Lines through Edward's bed where he originally slept

Each year about 2400 children are treated for cancer in the UK. All the children with cancer I have checked have been Geopathically Stressed.

→ ALL ←

LUCKY JETTE

Jette Jorgensen, had surgery to remove cancer tumours on both ovaries, followed by tough chemotherapy treatment. The doctor told her without hesitation that her type of cancer most often came back and was then terminal. Jette's older sister, recommended she visit a complementary health practitioner, who found her to be Geopathically Stressed and organized dowser Helen to check the place.

Helen found Jette's bed was in a very Geopathically Stressed place, with the lines crossing her reproductive organs. Jette's bed had been in that place for over 18 years and she always had cold feet and sweated profoundly each night.

Geopathic Stress lines Through Jett's bed where she use to sleep

As soon as Helen had Jette's bed moved into a Geopathically Stress-free place, Jette's feet immediately became warm during the night and she was no longer sweating. Helen also found the corner settee where Jette always sat, to be very Geopathically Stressed and where she also had a feeling of cold feet. The settee was moved into a good place.

Geopathic Stress Lines through Jette's settee before it was moved

It is now almost fifteen years since Jette had cancer; she has been back in a full time job at her local hospital for a long time. She is now a healthy person with a sparkle in her eyes, full of life, which is being enjoyed by her husband and two children.

Jette regularly detoxifies herself and does a lot of exercises, including swimming.

NON CANCER CASES

LUCKY PETER

Peter (18 months old) had been in and out of hospital all his short life with breathing problems and could not play for more than a few minutes at a time. His mother rang me up on a Friday and I advised her to move his cot from 'A' to the other side of the room 'B'.

His mother rang me up the next Monday and said jokingly, "You should never have advised me to move Peter's cot. He has now become too lively, I can hardly control him." Peter came to see me several years after with his mother, who informed me he had not seen a doctor since his cot had been moved.

"Dear Rolf,

Our 19-year-old daughter Clair has been suffering from ME for many years, she always slept badly. On your advice, we moved her bed as you had suggested (from 'A' to 'B'). The first night she went to sleep straight away for the first time in many years and slept like a baby all night. This has not only improved her health, but Clair can now study for about 20 minutes most days. Before she could hardly get from her bedroom to the lounge and could only study once a week for 15 minutes. Thank you for all your help. Best Wishes Ann (Mother)"

These are just some of the tens of thousands of people and buildings I have checked for Geopathic Stress over the last 20 years.

"Dear Rolf Gordon

*London N22
20 May 2005*

I am writing to thank you from the bottom of my heart for the distance dowsing information for my house. (14/03/2005). For me this has been a breakthrough in supporting my recovery from ME. After 11 years with the condition and the last 7 years when I have been unable to work, I now feel that I am emerging into the light once more.

*Yours sincerely
Paul Hancock*

THE AIM

The aim of this book is to ensure as many people as possible can learn how to locate Geopathic Stress. This will enable the knowledge to be spread to everyone, so that all can benefit and will ensure that the right precautions are taken against GS in our homes and other places where we may spend long periods of time (workplaces, for instance).

GS can be located and measured by scientific instruments such as the Geo-Magnetometer but this is a slow and cumbersome method and the instrument picks up many influences, not all of which are harmful to health. Whereas the most sensitive measuring instrument - the human being - can detect GS quickly and accurately and be more selective. Dowsters have proved in controlled tests that they can pick up even extremely weak electromagnetic influences as accurately as any instrument and it is a serious mistake to dismiss the dowsters' skills as non-scientific. Professor Helmuth Hoffnan, the Director of the Institute for Electrotechnique has stated that the success of dowsters is so evident that science can no longer afford to reject them.

The best-known method of locating GS is by using a springy Y-formed willow twig as a dowsing rod. However, it has now been discovered that most people can learn to use a pair of L-shaped steel wire rods, which are very accurate in locating the Geopathic Stress lines. Therefore I shall only describe this method in the main body of the book. See appendices for how to locate GS by using the Arm Muscle Test and the Pendulum.

You may wonder why this phenomenon is so little known, even though it has been much discussed from the 1930's onwards. As far as doctors are concerned, the explanation may be the inexplicable (parapsychic) circumstances surrounding dowsing and that research has been carried out in other directions. From experience, one knows it can take decades before the time is ripe for matters capable of solving existing problems are taken seriously.

FENG SHUI

Most people who deal with Feng Shui realise GS is the first thing to check for, to ensure a 'happy house'

HOMEOPATHIC AND BACH FLOWER REMEDIES lose about 50% of their powers if standing in a Geopathic Stress place. Ensure you check out where you store them. The remedies regain their power again, when left in a stress free place for about 24 hours.

TOOL

A pair of L-shaped wire dowsing rods can be easily made from a pair of wire coat hangers:

Cut where indicated and straighten the bend out so that it becomes a right angle.

To enable the rods to swing more easily, the shells of cheap ballpoint pens can be used as sleeves on the short end (see above). To prevent the L rods swinging about too freely out doors, you could shorten your rods or use heavy gauge wire e.g. brazing rods.

It is not important what material your dowsing tool is made out of, as long as it is reasonably balanced and you feel comfortable using it.

PRACTICE

These L rods are each held in the fist by the short length and carried in front of the chest with the longest length pointing forward.

The horizontal section of the rod must not rest on the hand and the thumb must not be on top of the bend, otherwise the rod cannot swing freely.

You must now learn to hold the rods completely horizontal and steady. This is achieved with a little practice. The end of the rods must not point upwards, otherwise they will fall sideways when you move and the rods must not hang down, otherwise too much force is needed to swing them sideways.

So learn to keep the rods horizontal and try to hold them steady when you move slowly forward. You should adopt a sliding walk, which is something like a cat's, when it is creeping in on its prey. The most important thing is to hold the body completely steady as you move forward, thereby keeping the arm and rods unaffected by body movements. As soon as you have mastered this, you can start searching for your first GS line.

If the rods move violently, YOU have over stepped your gift.
BACK OFF!!

THE SEARCH

The rods will react either by swinging out sideways or by crossing over one another. Curiously enough it makes no difference which way the rods swing.

You must concentrate on exactly what you are seeking, as the rods can be used to find many other things, such as water pipes, drains, electrical cables etc. Focus your concentration on Geopathic Stress lines and you will not be attuned to other signals.

In the beginning, say to yourself 'I am looking for GS lines and I want the rod to swing out when I get to one'. As you are walking, it is important you keep a clear image of GS lines in your mind and that you keep focusing on them. To prevent yourself having expectations as to where the lines are, it might help to keep repeating to yourself 'Geopathic Stress lines'.

When you have found a GS line, then walk forward and back over it a few times until you become familiar with the forces that are influencing the rods. You will soon learn to distinguish accurately between twistings, which are due to your own movements, and those, which are due to GS lines.

When you find a GS line, it is as if a magnet is pulling on the rods.

No matter whether the rods cross or swing sideways initially, they will afterwards place themselves parallel to the GS line they have located.

Therefore you should not approach the GS line at angle less than 45 degrees. Cross the area in various directions.

If you walk more or less in the same direction as the GS line, you run the risk that the rods will not register, as they will continue to point forward in the direction of the GS line.

Remember, keep a loose grip on the rods, keep them horizontal and concentrate on the Geopathic Stress, not on the rods.

When these points have been mastered, you can start your first survey for GS in a house.

To practice dowsing with rods for the first time, it is usually better to go out into say some open woods, where there is no wind, you are not overlooked and where you can be completely relaxed about finding Geopathic Stress lines (not anxious like when dowsing your own home). I personally found this the best way to get started dowsing with rods. As explained later, in woods with oak trees, you will always find several GS lines crossing through oak trees.

SURVEYING

It is a good idea to walk around the outside of the building first if possible, so that you get a general idea of how many GS lines cross the house and their direction. You won't necessarily locate them all the first time, especially if the weather is rough and windy. Try and walk the other way round the house and perhaps more GS lines will be discovered. Watch out for water mains entering the house, as they may confuse you.

Start by making a rough plan of your bedroom floor. It does not have to be to scale. Indicating North and South is not necessary. Draw in where all the beds are.

Use the dowsing rods or pendulum to find the Geopathic Stress lines and mark them on your plan. Double-check afterwards with the muscle test to confirm if a bed is in a Geopathic Stress place and any good places in the bedroom. It might be a good idea to get somebody not living in your home to check for Geopathic Stress lines independently without showing your results first. You may be influencing your dowsing by wishing your bedroom to be without Geopathic Stress.

All rooms should be crossed in two directions at right angles to one another, in order not to miss any lines by moving too close to the direction of a line. If a room is of reasonable size, both ends should be crossed in one direction and then in the opposite direction. It is always a good confirmation when you find the same lines on the way back.

In this way you should walk through all the rooms on the bedroom floor. You must locate the lines in each room without following some preconceived idea of the lines' direction from the adjoining room. Afterwards you can check that the pattern from one room continues into the next room.

You should then go to the ground floor and mark the GS lines unless you live in a bungalow or a one floor flat. It will now show that the pattern corresponds exactly with the pattern upstairs, as the GS lines extend vertically up from the earth's surface. No matter how many floors high the building is, the same pattern will be duplicated, although in very tall buildings, you may find the lines slanting diagonally.

With practice, you will get a feeling of how strong the GS lines are. The first GS line found will nearly always be the strongest. (How to measure strength of GS, bottom of page 72)

Have you found the right lines? If you have concentrated completely on the GS lines that are harmful to your health, the rods will only react to these.

You can now finish off by walking round the house once more and checking the lines along the way. They will all be there and the survey is finished.

The strength of the GS lines varies. During the night, their intensity increases. Experiments have shown that at the time of the full moon, they can be about twice their usual strength. The lines are also stronger during rain and stormy weather. *November*

There are various types of lines, but it is not necessary to know about them. As long as you only ask for 'Geopathic Stress lines' your L rod will only pick up the lines, which are harmful. However, if you are interested, see page 82.

When you are lying in bed at night, you are more likely to be affected by the presence of any Geopathic Stress lines, as the GS lines are stronger during the night and your body, being in a horizontal position, is exposed to a larger area of them than when you are standing up.

sleep with head north regenerates brain A student or

Also, as soon as you fall asleep, you go into what is sometimes called a 'paradoxical sleep'. When your brain is released from having to concentrate on speaking, seeing, hearing, body movements etc., it can, during sleep, use all its energy on replacing and repairing cells (80% are created during sleep) and strengthening your immune system. But about half the time you are asleep your brain also needs some rest. However, if you are Geopathically Stressed, the GS lines interfere with the minute electrical signals your brain sends out to repair your body during sleep. This means your brain has to work harder and therefore gets little or no rest and you wake up feeling tired and maybe with a 'muzzy head'. The Geopathic Stress will also weaken your immune system so you will have difficulty in fighting any new health hazard coming along and will prevent you absorbing the maximum amount of Vitamins, Minerals and Trace Elements from your food supplements and drinks.

DROP
out
head south

PRECAUTIONS TO BE TAKEN WHEN SEARCHING

Very often, the person searching for GS lines may feel exhausted after a little while. It is as if you have been drained of energy, but the tiredness will disappear after a rest. If you feel bad while searching - stop. This is very important. You should certainly not search for GS lines if you are already tired, ill or depressed, as you will only aggravate your condition. If you are chronically sick, then ask someone in good health to dowse for you.

It is a good idea to take a shower or at least wash your hands under running water after a search. Also, ensure that you lead a healthy life - with a good diet and plenty of fresh air and exercise. *or touching someone.*

Do not dowse during stormy weather and full moon, as the GS will be extremely strong then.

For various reasons do not let children become involved in dowsing. Children are very sensitive to Geopathic Stress and find that they can dowse for the lines quite easily. However, they shouldn't be exposed to the influence of GS unnecessarily while they are still growing and developing. Also, young children might not always appreciate that searching for GS is a serious endeavour and might treat the whole thing as a game.

You must also be sure to carry out the work conscientiously. It is not something you do for fun, even though it is very interesting.

You should re dowse your home or a building every now and again as the GS lines can move and become stronger due to building and roadwork, land slides, earthquakes etc.

lightning

RESULTS OF MOVING BEDS OUT OF GOEPATHIC STRESS LINES

Sophie B. Hants. 19 year old Sophie always had great difficulty in getting to sleep. On my advice she moved her bed from A to B. Next morning Sophie's mother rang very excited and said her daughter had a fantastic night's sleep last night. August 2014

To Mr Gordon,
Thankyou for helping
me sleep better by
moving my bed away
from stress lines. I
have improved my
sleeping patterns!

From Sabrina
age 11 88 months

CAMPBELL, 14 the oval
Dymchurch
Kent

Bedroom
age 11

Dear Rolf Gordon

Many thanks for your letter with the results of dowsing, of the placement of the bed. It has been a great help to move the bed out of the geopathic stress area. My sleep pattern has changed for the better and body and mind feels better.

Yours sincerely

Vaill Sieger

Dear Mr Gordon,

When we moved our beds according to your recommendations, we all slept so much better and I knew that if I ever moved, I'd write to you again.

Thank you so much for your help.

Best wishes,

Poly

EXAMPLES OF GEOPATHIC STRESS LINES IN HOUSES

Move beds. →

FINDING AND ACTION

The information must now be studied. The first thing to note is the location of the bedroom in relation to one or more GS lines. A GS line must not run under a bed. If you are so unlucky as to sleep in a place CROSSED by two GS lines, or one strong GS line, one can almost be sure you will become ill, if you are not so already. In either case, you must move the bed or move to another room, where a bed can be put in a position away from any GS lines.

Many people, particularly couples in double beds, feel there is only one place and one room where their bed can stand - because it has always been standing there - and are very reluctant to move it. BUT even if the bed ends up at a funny angle or in another room, surely this is better than being ill. You can always put rollers under the bed so the bed can be moved into a safe place at night.

There was a tragic case where parents were warned that the life of their 7-year-old daughter was at risk because her bed was standing on an extremely strong GS line. The parents were sceptical and reluctant to move the child's bed because that would have involved removing a built-in wardrobe. The child is now dead.

Some houses may be so greatly plagued by GS lines that it will be difficult to find anywhere safe for a bed so a strong neutraliser would have to be installed. The ideal thing would be to live in a house without any GS lines, which is only possible by chance, UNLESS AN INVESTIGATION IS CARRIED OUT BEFORE DECIDING WHERE TO MOVE TO OR TO BUILD.

There is no doubt that a home plagued by strong GS will be uncomfortable to live in, but ensuring that your bed is not in the direct line of a GS line will be an enormous help.

Don't forget to check where your favourite chair is in front of the TV, in the kitchen and your place of work if you spend many hours in the same place. Many cases of cancer in the lower parts of the body have been detected in people who have sat for long hours daily on the same office chair, which is found to be in a GS place. The metal legs help to concentrate the GS on the body.

It can sometimes take a long time for a body to lose the effects of Geopathic Stress even though some will experience immediate benefit. It may take a long time to feel an improvement if one has had a chronic condition such as ME for some time. In some cases it will be necessary to have treatment to unlock the long term effects of Geopathic Stress, such as Homeopathy, Bach Flower Remedies or put one's hands on a strong neutraliser for a short time.

Your body may need to be purified. There are people out there that can help. MAKE SURE they are not fakes. Word of mouth is best as a good chuser energy person does NOT advertise.

TYPICAL BEGINNER'S MISTAKES WHEN DOWSING WITH RODS

1. The thumb locking on top of the rod.
2. The horizontal rod resting on the index finger.
3. Gripping the rod too tightly (if it has no sleeve).
4. Finding the rods are spinning around in circles. Try and drop the tip of the rod down a bit then back horizontal, as you gain more experience.
5. Walking too fast. ← Read again ←
6. Forgetting to mark the position of the GS lines!
7. Not working to a systematic plan.
8. Forgetting to go through each room in two directions at right angles to one another.
9. The reaction on the rods coming too late. *because you GO TO FAST.*
10. Relying on the rod to indicate the direction of the GS lines accurately before you have experience. *Read # 5 AGAIN*
11. Not concentrating on Geopathic Stress lines.
12. Assuming that you have found a crossing just because the rods cross. To be certain you have found a crossing point, you must find two or more lines independent of each other and determine the place at which they meet, like roads at a road junction.

A SIMPLE TEST - Confirmation without using L rods

THE MUSCLE TEST

If you think that you have located a GS line, use this test to confirm your findings; we have found it a very effective test, especially helpful for beginners who are not yet confident with dowsing rods. Your body can clearly tell you if you are actually standing on a Geopathically Stressed place. People trying the muscle test for the first time are quite astonished by the results. See page 77.

If you always feel restless in bed and don't feel fresh in the morning, or have other symptoms which have resisted treatment, try moving your bed, or sleeping in a different room. If you subsequently feel better, it is very likely your original sleeping place was in a GS place.

Many people find they sleep better on holiday, not purely because of different surroundings, but because they have slept in a bed not affected by Geopathic Stress. Unfortunately it can also be the other way round where people sleeping in strong GS places away from home has resulted in the beginning of a long term illness.

IMPORTANT

* Children who sleep in Geopathic Stress places will find they react very quickly to Geopathic Stress later in life. People who sleep in good places as children may take many years to be affected when they sleep in a GS place later in life. This is particularly noticeable when a double bed is GS all over. The person who was GS as a child will be affected much sooner (years even) than the partner who was not Geopathically Stressed as a child. *

GEOPATHIC STRESS AND ILLNESS

The healthy development and functioning of living cells is dependent upon bio electrical processes. The distortions of the earth's natural vibrations that we refer to as Geopathic Stress, not only dramatically interfere with our bodies' natural ability to repair cells and fight off disease, but also with our ability to create new life.

One Doctor reported that many of his women patients had failed to conceive for many years, but found it possible to have children soon after their beds were moved away from the influence of GS lines. There also appears to be some connection between the influence of GS and infertility in men. The presence of Geopathic Stress has been found in many cases of miscarriage and women who have slept on GS lines have often reported particularly difficult pregnancies, premature births and given birth to babies with defects. Also many women have reported relief from P.M.T. and period pains after moving their beds to GS free places.

Later, I give my strong views on Cot Death and how Geopathic Stress lowers children's resistance to various ailments. Also how Kathe Bachler, through her extensive research, has provided very strong evidence of the connection between learning disabilities and disturbed behaviour patterns in children and Geopathic Stress.

Sleep with Head NORTH

Which illnesses do you risk by sleeping over Geopathic Stress lines? Here are some of the illnesses which von Pohl, Kathe Bachler and many other researchers and Doctors have found most often occur over GS lines. These conditions must not be thought to be caused by Geopathic Stress in the same way that bacteria or virus infections cause disease, but develop as a result of the breakdown of the body's natural functioning and lowering of the immune system.

CANCER, AIDS, ARTHRITIS, RHEUMATISM, ASTHMA, ME., MIGRAINES, INSOMNIA, MANY STOMACH, KIDNEY, BLADDER, LIVER AND GALL BLADDER DISORDERS, KIDNEY & GALL BLADDER STONE FORMATION, TUBERCULOSIS, MENINGITIS, MULTIPLE SCLEROSIS, HEART TROUBLE, DIABETES, PROBLEMS WITH SINUSES, UTERUS & ADRENALS, OSTEOARTHRITIS, THROMBOSIS, EYE, EAR AND TEETH DISORDERS, INFLAMMATIONS, VARICOSE VEINS, LEUKAEMIA, NERVOUS, EMOTIONAL & MENTAL DISTURBANCES.

There is strong evidence, which links GS with suicide, divorce, insomnia, depression, the promotion of stress, high blood pressure and alcoholism. Children who wake up and cry during the night have been found to be sleeping in GS places in many cases. It has been shown that RESISTANCE TO TREATMENT, including slow or partial recovery or recurring infection, is connected with the presence of GS and when its influence is removed, a spontaneous improvement in health occurs as the treatment starts to take effect.

H gdw Loop
I have hardly ever come across anybody who has died of meningitis, E' coli food poisoning, BSE, Legionnaire's disease, or bird flu without them being Geopathic Stressed.

When you are asleep and affected by Geopathic Stress, your body has to put something on the 'back burner' while it is fighting the G.S. Your body must produce 80% of your new cells, while you are asleep, together with revitalizing your heart, lungs, kidneys, liver and other organs. So it puts off dealing 100% with your digestive system, thereby slowing down your body's ability to repair and heal itself and absorb vital vitamins, minerals and trace elements.

It can also ruin your sex life! See page 42

CANCER CASES

Ole Hovmand, a dentist and Danish M.P., had to give up all of his many activities when he was 46, as he was steadily feeling worse. He tried orthodox and alternative medicine, masses of vitamins, minerals etc., with no result. Only when he became so ill one day, that he was rushed to hospital for a thorough examination, including a scan, that cancer of the liver was discovered. Ole miraculously survived a very big operation. During his convalescence in 1984, he heard about the harmful effect of Geopathic Stress on health. At some length he managed to locate a dowser, who found that two GS lines crossed his bed at the spot where his liver was, when he lay in bed.

Being so thankful for his survival, and for the discovery of the GS soon afterwards, the dentist set out to find out about GS and to teach everybody how to locate it.

He talked with 40 of his patients or friends of patients who were under treatment for cancer and was asked to survey their houses. To his great surprise, in ALL cases he found GS lines passing through their beds.

He further found that other illnesses also appear to be connected with GS lines. In any case, the affected people felt much better when their beds were moved so that they were no longer in GS.

The plan shows where two GS lines crossed under the right hand side of the double bed where Mr. Hovmand was sleeping when he developed cancer of the liver.

The Society Ole Hovman started and spread the knowledge about GS to hundreds of thousands of Danish people through publications, lectures and TV appearances. He firmly believed in the realisation of his aim: **CANCER = NIL** if people are not Geopathic Stressed.

John P. was diagnosed with terminal lung cancer and was only given a few weeks to live., so the hospital did not offer him any treatment.

I found that John's bed was on a very Geopathically Stressed line. He immediately moved his bed from A to B on my advise. Next morning, he slept to 11am, which he had never dove before and from then on he lept so much better. After dealing with is very high micro-parasites, low pH, low Q10 levels and using the MagenTech on his lungs, John soon felt so much better. So when John went back to his hospital, about three weeks later, seeing that he looked so much better, the doctors agreed to

(1)

Lung Cancer

(7)
Cancer

Mrs. G.A.'s husband died of cancer of the liver and kidneys. Later it was discovered that a very strong GS line was under her husband's bed (1). 10 years previously, her first husband died in the same bed. He was 53 and died of cancer in the large intestines. A lodger, 56 years old, died of lung cancer in the same house. A GS line was found directly under the place where his chest was, as he lay in bed (2). She herself suffered bad pains in her heels. It was found that a GS line ran just under the place where her feet were, when she was in bed (3). Now that she has moved her bed she no longer has any pain.

Mrs. I.S. was operated on for chest and stomach cancer. A search showed her bed was on the spot where two GS lines crossed (4). Over 6 years ago, the bed was moved to a place free of GS. The doctors do not understand how she can still be alive and keeping so well. They had not given her much chance of survival.

NOT
In the country, many believe cancer is inherited. The son takes over the family's farm - and some years afterwards, he dies of cancer, just as his father did. Nobody takes into account that they slept in the same place. Searching for Geopathic Stress on many of the farms where this has happened, has confirmed the GS lines must have had a major influence. In other words: YOU INHERIT THE SLEEPING PLACE - NOT THE ILLNESS.

Farmer H, his father and grandfather, all died of lung cancer, at an early age and all had slept in the same bed, one after the other. Mrs. H had problems with her gall bladder. When it was discovered that the entire area of the bed was affected by strong GS (5), Mrs. H moved the bed immediately and her health improved.

Lotte went to sleep in her grandfather's bed (6), just six months after he died of lung cancer. Immediately, Lotte found she was sleeping badly, started having headaches, lost her appetite and her schoolwork began to suffer. As soon as it was discovered that the bed was troubled by GS, Lotte moved to another bed and was soon the happy, healthy girl she used to be.

One dowser was shocked to hear that his friend had died of cancer, especially since he had made a point of checking the friend's bedroom and found the bed to be in a safe place. A later search revealed that the friend's desk, where he had spent long hours working and watching TV, had stood on a particularly strong GS line (7). But the dowser had not checked the area the first time round, as the desk was in an awkward spot to check.

- The moral: Please be thorough and check all places, including favourite TV chairs, day sleeping places, chairs at the kitchen and dining tables and desks and workplaces, both at home and at work.

FACTORS INFLUENCING CANCER

Over the last 24 years I have been involved with thousands of cancer cases and found in all cases of cancer in adults they were affected by what I call THE BIG FOUR

WRONG

7.

1) GEOPATHIC STRESS

Studies have shown that Geopathic Stress is the common factor in relation to cancer, but that does not mean that you necessarily will get cancer if you live in a Geopathic stress place. Also the length of time one can sleeping peacefully in such a place, before getting health problems varies greatly with the individual, particularly if you were G.S. as a child. In other words, other factors also have an influence on the development of cancer.

2) MICRO PARASITES

It is claimed that micro parasites are present in most people who are seriously ill. Micro parasites can, in most cases, be successfully killed with a powerful 100% stabilised allicin extract.

Diseases caused by micro parasites have now reached epidemic proportions and are one of the most under diagnosed and under appreciated health threats in the world. Doctors do not as general rule check for micro parasites as you mainly need a dark field microscope, which as a general rule are used by few doctors in the UK. Medical drugs such as antibiotics are not very successful in killing micro parasites.

Oragano 8-10 drops 72-10.12 hours then 4-5 hrs just before full moon same remedy for the start of a cold.

Antibiotics have become less and less effective due to their over prescription for many years, thereby giving bacteria the chance to grow stronger and resist treatment, so more powerful antibiotics are used, often resulting in many side-effects. Antibiotics are also sometimes given for viruses on which they do not work.

No new type antibiotics have been developed for about 25 years.

Allicin is a patented product Allisure®, discovered by English chemists, containing 100% stabilised Allicin. It is produced from two compounds, Allinase and Alliin. They are kept completely separate inside garlic and normally are only created when the garlic bulb is attacked by microbes in the soil. (Garlic is the only vegetable which seldom rots).

Allicin is successfully in over 90% of cases where antibiotics are no longer effective.

Allisure® is nature's powerful antibiotic, anti-parasite, anti-viral, anti-fungal and immune booster, with no side-effects reported during over 15 years use.

Often people get such a weak immune system caused by powerful orthodox cancer treatments, that they get pneumonia, septicaemia, which Allicin has often successfully treated. In my opinion, Allicin is the most powerful immune booster when you are seriously ill

The Government's Chief Medical Officer, Profesor Dame Sally Davies, said: "The resistance to antibiotics is a ticking time bomb. Routine operations such as hip replacements, could become fatal in just 20 years time, if we lose the ability to fight infections with antibiotics".

To ensure that you do not bring micro parasites in from outside:

remove your outdoor shoes and wash your hands thoroughly with soap over 20 seconds. Best with hot running water above the body's temperature 37° where bacteria can't cope. Remember not to rub your eyes with your fingers when outdoors. Your eyes are the quickest way for micro-parasites to enter our body.

Allicin is sold by Dulwich Health as AlliTech.

3) → CO-ENZYME Q10 Q10 is the sparking plug for nearly all our cells, creating the substance ATP (Adenosine Tri-phosphate), which is the cells most important source of energy for all our biological functions, such as physical and mental activity and those dozens of energy-needing systems like digestive and organ activities.

Your liver converts the lower Co-Enzyme Qs from your food into Q10, which can be absorbed by your body. Your liver needs Q10 to operate 100%. If you are ill, your liver becomes weak, so it cannot produce enough Q10 for the rest of the body.

It is vital to take extra Q10 if you are taking statins for lowering cholesterol, as you are depleting your body of Q10 because they share the same biosynthetic pathway in your liver. There are no known interactions or contra-indications with Q10, so it is vital you take Q10 all the time if you have cancer, especially when you are in hospital having treatment. Don't forget body makes Q10.

Successful Trials were carried out in Denmark by Drs Knut Lockwood, Sven Moesgaard, Takeshi Hanioka and Karl Folkers in which 32 typical breast cancer patients between 31 and 81 years of age classified as 'high risk' of secondary cancer were treated over 11 years from 1990 and 2001 with Q10.

Main observations.

1. Only two of the patients died of cancer during this period. Normally one would have expected half of the women to have died over his period.
2. None of the patients showed signs of further distance metastasis.
3. Quality of life improved (increase in weight and reduced use of painkillers).
4. Many of the patients showed total remission.

The patients were initially treated according to the routine procedures in Denmark i.e. surgery, chemotherapy, radiotherapy and in some cases Tamoxifen. All the patients were taking about 400mg of Q10 daily.

Recommended daily dose if you have cancer.

Children 30-100 mg Adults 100-400 mg

Scientific tests show Q10 in oil, in soft gelatine capsules, is easier for your body to absorb. As Q10 gives you more energy, do not take capsules in the evening, otherwise they may keep you awake.

* Nearly everybody I have checked who was diagnosed with cancer were nearly all below 60% in Q10 (normal is 100%) *

I have never checked anybody who has died of heart attack or stroke who were not low in Q10.

Over 40,000 people die of liver diseases in the UK every year mainly due to lack of Q10.

Scientific evidence There have been hundreds of scientific papers published over the last 40 years to show the beneficial effects of Q10.

4) ACID-ALKALINE BALANCE

The single most important measurement for your health is the pH of your blood and tissues - how acidic or alkaline it is. Different areas of your body have different ideal pH levels, but your blood pH is the most telling of all. Your body will go to great lengths to preserve it, including wreaking havoc on other tissues or systems.

The acid-alkaline balance (also called acid-base balance) is measured on a pH (potential hydrogen's) scale from 1 (very acidic) to 7.4 (neutral) to 10 (very alkaline). A pH of 7.4 to 7.5 is slightly alkaline and is associated with good health.

Just as your body temperature is rigidly regulated, your blood must be kept in a very narrow pH range - mildly acidic or alkaline. Your correct pH is more important than blood pressure, cholesterol count, blood sugar, hormone levels, calorie count etc.

READ → Did you get it!!

Nurses who had worked for some time on hospital cancer wards, informed me that all cancer patients there had very acidic blood, especially if they have had chemotherapy.

How to measure your pH balance

You can measure the pH balance in your saliva or urine with pH litmus test strips. These are not normally stocked by major chemists. However there are various suppliers on the internet under litmus pH test strips. For testing your urine, collect a sample in a container first thing in the morning, after you have fasted overnight. Tear off a test strip with dry fingers. Dip the test strip into the urine for 2 seconds. Pull it out and shake off surplus liquid. The test strip changes colour depending on the pH value at the moistened patch. Compare the colour with the colour scale. A blood pH test is the most reliable, as taken from blood samples at your doctor's clinic or hospital after fasting overnight. However, they cannot be done on a daily basis as you might experiment with different diets and take, for example, Bicarbonate of Soda.

Bicarbonate of Soda (without aluminium) is very effective in regulating your pH. A year's supply will cost less than £1 from your local supermarket. If your pH is above 6.2 pH, take one level teaspoonful of Bicarbonate of Soda for two days, in a small cup of water, first thing in the morning, half an hour before any food.

If your pH is between 5.5 and 6.1 take Bicarbonate of Soda for 7 days.

If your pH is between 4.2 and 5.4 take Bicarbonate of Soda for 10 days.

If your pH is very low, say below 4.1 take two heaped teaspoonfuls for 2 days then one teaspoonful for 10 days.

Later take one teaspoonful once a month unless you were below 4.5 pH, then take twice a month.

By taking Bicarbonate of Soda first thing in the morning, it passes through your empty stomach quickly into your small intestines, where it is absorbed into your blood. Taking Bicarbonate of Soda half an hour before food, enables your stomach to become acidic again.

- If you are anxious or worried, one or two half teaspoonfuls a day can be very effective.
- To test if you need Bicarbonate of Soda, take 2-3 teaspoonfuls first thing in the morning in a small cup of water. If you belch within 5 minutes, you most likely have had enough and your pH should be OK.
- If you cannot tolerate Bicarbonate of Soda, wash an unwaxed lemon (if possible an organic lemon) and place it in your deep freeze. Grate some of the frozen lemon (rind and all) onto your food twice a day. This helps your blood to become more alkaline, as lemons turn alkaline in your body.

Giving Vitamin C intravenously, has been a very successful cancer treatment on the continent of Europe. As it may be difficult to find a doctor in the UK to carry out this treatment, eating a grated lemon is a very powerful way of getting Vitamin C into your body.

Two cancer patients who had completely lost their appetite, got it back within 24 hours, by taking two large teaspoonful of Bicarbonate of Soda, first thing in the morning. One gained 1.5 kg the first week.

According to Dr Tullia Simoncini, the famous oncologist in Rome, Italy, Bicarbonate of Soda hits cancer cells with a shock wave of alkalinity, which allows more oxygen into the cells, than cancer can tolerate. Cancer cells cannot survive in the presence of high levels of oxygen. Bicarbonate of Soda is effective in treating poisoning or overdoses from many chemicals and pharmaceutical drugs by negating the cardiotoxic and neurotoxic effect. The safe oral use of Bicarbonate of Soda should be taken very seriously no matter what other treatment is used. It also means that you do not have to alter your diet too drastically. Remember -'you must feed your soul'. (See page 33)

OTHER HEALTH RISKS

We hear much debate over suggested evidence that people living in close proximity to Atomic Power Stations, Overhead Power Cables, Mobile Masts and other Electrical Pollution show a higher than average rate of cancer. There is no doubt about the harmful influence of these invisible and many other environmental pollutions, including radon gas, but in all cases that I have checked, the effected person ALSO had Geopathic Stress which weakened their immune system.

The one factor we can all do something positive about immediately is to help carry out general protection of our family, friends and work colleagues by checking all buildings and making sure everyone knows of the preventative measures to take against Geopathic Stress.

* Remember: Geopathic Stress has been found to be the ONLY common factor in most cancer cases. Getting rid of Geopathic Stress will not GUARANTEE you will never get cancer or not get it again, as many of the above factors can cause cancer, but the chance of getting cancer will be much reduced.

5) Hydro loop. Comes from your transformer
It destroys your immune system, causes myo-
phybr - myalga & negates the value of pills and
immunization shots, one needs more medication / day
a longer time to get one "healthy"!

6) sugar → Cancer
7) booze →

CHILDREN AND GEOPATHIC STRESS

PREGNACY

First of all GS will reduce your ability to create new life. It is estimated that over 90% of women who cannot conceive, are sleeping in a GS place and in over 50% of cases, it is the main cause of being infertile (except in the case of STDs). Natalie had tried to conceive for 15 years. She moved her bed and her favourite chair out of GS places and became pregnant. If you are then sleeping in a GS place during pregnancy, it can be a major contributory factor in difficult pregnancy, a miscarriage, stillbirth, premature birth or an unhealthy newborn baby and post natal depression.

In all cases of cancer in children I found the mother was sleeping in a Geopathic Stress place during pregnancy. This has been confirmed indirectly by doctors as "the first hit".

Also in Down's Syndrome cases I have found the mother of the person slept is a Geopathic Stress place during pregnanc.

AUTISM

I have also found in all the cases where I have checked the mother of the person with autism, she was sleeping in a Geopathically Stressed place during her pregnancy. The Autism disorder varies from mild to so severe, that the person may be unable to communicate and need round the clock care. Autism affects over 600,000 people in the UK and costs £32 billion per year in the for of treatment, loss of earnings, care and support for children and adults with Autism. The average cost of supporting someone who is Autistic during their lifetime, is about £1.5 million. There are about 120,000 autistic school children in the UK.

In all cases when children are diagnosed with Autism, I have found that they were Geopathically Stressed. When children are no longer autistic, my distance dowsing tells me that they are no longer Geopathically Stressed.

1 in 66 babies in Canada
~~*Some children are no longer autistic.*~~

When Matt was young he was diagnosed with Autism and slept in a very Geopathic Stress (GS) place (-4 225Hz) 'A'. At 17 years old, he slept in a good place (+2 8Hz) and was no longer autistic. When Matt's mother was pregnant with Matt, she was sleeping in a GS place (-3 191Hz) 'B'.

John was sleeping in a very GS place (-4 226Hz) when he was autistic 'C'. When he was 4 years old the family moved and John now sleeps in a good place free of GS (+2 8Hz) His mother slept in a very GS place (-3 195Hz) when she was pregnant with John 'D', he is no longer autistic.

Mark was sleeping in a very strong GS place (-4 226Hz) when he was young and diagnosed with Autism 'E'. Now he sleeps in a good place (+2 8Hz) and is no longer autistic. His mother slept in a very strong GS place (-4 225Hz) when she was pregnant with Mark 'F'.

Notes: Good places are 0 to +2 8Hz. Geopathic Stress places are -1 to -4 9Hz to 226Hz.

COT DEATH

Sudden Infant Death Syndrome has ripped the heart out of thousands of mothers and fathers in this country. It is the second most common death (after congenital abnormality) in babies between one week and one year of age.

I found many years ago that every child who died of cot death had been staying for long periods in Geopathic Stress places, which have weakened and eventually switched off the signals from the respiratory centre in the brain, which have to be conveyed continuously to the lungs to enable the babies to keep breathing, until it becomes a habit as the baby gets older.

One must bear in mind:

1. Most cot deaths occur between the second and fifth month. The GS take some time to weaken the baby, so death does not occur immediately after birth, but the GS is playing a major part in weakening the baby while it is still immature.

2. The GS is strongest in the night, causing the majority of cot deaths to happen during the night and early morning.

3. Cot deaths have been observed to occur in waves, a number of deaths being reported within a short period of time suggesting a link with changing weather conditions. The strength of GS fluctuates according to weather conditions and is particularly strong during electrical storms, caused by strong sunspots.

During a lecture given by Dr. F.S. Anderson, a girl in good health was seated on a chair, which unknown to her was placed where two GS lines crossed. Within fifteen minutes, the girl felt so unwell that she was sick. What effect would this have had on a newborn baby?

Dr. Palle Gad, a surgeon in Aarhus, Denmark, has together with John Metcalf and Niels Boie, of the Geological Institute at Aarhus University, investigated 18 cot deaths and found all of the cots were standing in Geopathic Stress places.

These babies in one family had died one after another, in a cot that stood on very strong GS lines. In another instance, after one baby had suddenly and inexplicably died in his sleep, another child's bed was moved to the original site of the cot and very soon the child developed internal problems, which ceased soon after the bed was relocated. This house was found to be very badly affected by GS and the previous tenant had died of cancer.

Doris Ingemann Rasmussen, a midwife and district nurse, has realized for some time the debilitating effect GS has on people and the improvement in health after beds have been moved away from places affected by Geopathic Stress. Mrs. Rasmussen has seen many cases where healthy newborn babies have come from hospital but have become weak within a matter of days. The anxious parents have contacted her and she and her husband have gone to the house and searched for GS lines, found them crossing directly under the cots, which were moved immediately and the babies quickly gained strength again.

Mrs Rasmussen thinks that Geopathic Stress is the explanation for cot deaths for which, up to now, most people have been unable to establish any cause.

I informed the two Cot Death Societies over 20 years ago of my findings. They were not least bit interested. Since then over 7,000 babies have died of cot death in the UK.

How many kids have died of cancer in 20 years??
Is it worth risking the health of your baby just because you do not have a cut and dry explanation for Geopathic Stress?

Is safeguarding babies from the Stress too simple and too unscientific? It is so easy to move a cot into the best place in a home.

Please check where your child's cot or bed is standing!

Of course, not all instances of babies sleeping in GS places will result in cot death, but many other health problems can occur.

X Is it not about time we take Geopathic Stress seriously? X

CHILDREN'S RESTLESS SLEEP

As discussed on television recently, there are thousands of parents who continuously have sleepless nights, because their children wake up many times during the night and cry or have restless sleep. Even without searching for GS, I know of many cases where parents have been advised to move their child's bed, with the immediate result that all enjoy a peaceful night's sleep.

head in
a corner
bum up
trying
to escape

Many times, parents have found their small children sleeping sideways and/or at the bottom of the bed to get out of the GS. Sometimes older children get out of bed and spend the whole night sleeping on the floor in another part of the room or insist on sleeping with other members of the family. But the children have slept normally and peacefully in their beds as soon as they have been moved to a good place.

Baby Mary was waking up sweating, crying and lying up against the edge of the cot and at about 3am (A) each night. After turning her bed round (B) she is now sleeping in the middle of her cot and waking up relaxed and smiling at 7pm.

Many books have recently been published by doctors, giving advice to parents with children who won't sleep. Very comprehensive suggestions are given regarding sleeping patterns, physical discomfort, sleeping environment, medications and additives that may affect the children but no suggestion that the children may be sleeping in the wrong place. Yet the presence of GS is almost the easiest of problems to check and do something about.

A mother rang me to say she had to get up 4 or 5 times a night, due to her crying baby. After I advised her to move the cot to a safe place, she rang up two days later to say the last two nights were the first nights for 18 months that she was able to sleep through the night. Similar cases are now too numerous to count and almost please me more than anything else as it is so easy and costs nothing.

BED WETTING

It has often been found that older children who wet their beds are sleeping in GS places and that they become dry after their beds have been moved from the GS. A 9-year-old girl became dry within 14 days of her bed being moved. One mother reported of her two children, who used to have nightmares and wet their beds almost every night, 'The kids haven't wet their beds once since I moved them to another room'.

SCHOOL CHILDREN

Kathe Bachler, an Austrian teacher and devout Christian, has more than anyone else, proved beyond doubt, through personally dowsing 11,200 sleeping places in 3,000 homes throughout 14 countries, that Geopathic Stress is a common factor in all major illnesses.

Kathe Bachler's survey also revealed the astonishing fact that out of all cases investigated, the majority of children with learning difficulties either slept or had their school desks (or both) in strong Geopathic Stress places. This was the result of checking the sleeping and working places of thousands of children who had difficulties at school. Most improved when their beds or desks were moved to neutral (GS free) places.

*also ones head shook
sleep north*

Geopathic Stress affects children in various ways, such as: tiredness and lack of appetite in the morning, moodiness, lack of concentration and unsatisfactory schoolwork in relation to the ability of the child. Children may seem lazy, depressed, slow to learn or even backward. Some show hyperactive tendencies, are disruptive in class, difficult to handle, aggressive and stubborn. Eventually, the child does not want to go to school and may play truant. On top of all this, the child may sleep poorly, have nightmares and display the symptoms that adults show when sleeping in a disturbed place. It seems as though all the strength and vitality has been drained away from the child.

It is so important that children have restful sleep, away from GS, so they can be at their best at school. If your child has any of the symptoms listed above, try letting the child sleep in a difference place. Some schools in Austria move the children around the classroom at regular intervals to avoid the possibility of any one child spending the whole school year sitting at a desk in a GS place.

Kathe Bachler was born in 1923 in Abtenau, Austria, the youngest child of a mining family. She taught mathematics for 30 years and it was her concern that many of the children she taught were not achieving the academic results of which they were capable, that led her to being given a research grant from the Department of Education in Salzburg, to study the connection between Geopathic Stress and academic failure in school children.

Mathias Laireiter Ph.D., previous Superintendent of Schools for the Salzburg district, highly recommends Kathe Bachler's work and said that she has gained the support of many teachers, doctors and psychologists, along with the gratitude of all the parents and children for whom her work provided help and relief from suffering.

For a long time, Kathe Bachler was afraid to publish the results of her enormous research but, encouraged by the Church, she at last decided 'I must have courage and be myself and published the results of her work in the book 'Discoveries of a Dowser', which answers all the questions from her critics. An impressive list of doctors was included, who all confirm Kathe's findings and considered the influence of Geopathic Stress when treating their patients. Also included in the book are many examples from 11,200 cases. Professor Emil Worsch, biologist and physicist, says that it will now be very difficult for critics to deny the clear connection between Geopathic Stress and illness.

impossible

Kathe Bachler felt strongly that many people know that it is very important to sleep in neutral or 'good places' away from the influence of GS rays but are afraid to pass on the knowledge as they fear they will be misunderstood and ridiculed. Fortunately, there are many committed people, both professionals and laypersons, who are not afraid to speak out. They included the Archbishop Dr. Karl Berg, who warmly and unreservedly endorsed all Kathe Bachler's work.

By the time her book was published, Kathe had contacted more than 300 medical doctors. As long as she was given an hour to explain the effect of Geopathic Stress, they all became convinced that Geopathic Stress was indeed affecting our health and that it was possible to find the GS lines by dowsing.

HEART ATTACK IN YOUNG PEOPLE

Every week at least 12 apparently fit and healthy young people in UK die from undiagnosed heart condition. The ones I have checked were sleeping in very Geopathic Stress places and very nearly always high in micro-parasites.

SELF-HARMING

The number of cases of children aged 10 to 14 being admitted to hospital for self-harming is continuously increasing having almost doubled over the last 4 years. The number of girls admitted to hospital in UK during the year 2013-2014 has gone up to almost 6,000 and for boys 659.

In all the cases I have checked children who are self-harming they were sleeping in very Geopathic Stress places at home.

Black clouds are connected to G.S. and follow
or cling to the person who has been G.S.
suicide or murder

again".

One point should be mentioned: sometimes it seems as though people seek out Geopathic Stress, moving from house to house and each time, locating their bed DIRECTLY over a GS place, sometimes the only GS place in the house. This happens with alarming frequency and often people are most reluctant to even experiment with moving their beds to a new location, even though they have suffered ill health for many years. Geopathic Stressed people will often 'hug' the chair in the most stressful place, as this is the environment they are used to.

Have you ever noticed how previously active people can rapidly lose interest in life, becoming tired and sickly, after retirement? This is partly due to losing the stimulus of regular employment and is a critical time for many. But I have found many instances of people spending more time at home after retirement, in a Geopathically Stressed house, often sitting in a favourite chair, located directly over a GS line, becoming more and more lethargic and developing health problems previously unknown to them.

ARTHRITIS

Dowser Herbert Douglas from Shaftsbury, Vermont, U.S.A. reports that over a period of eight years, he checked the beds of 60 arthritis sufferers and in all 60 cases, he found GS lines crossing under their beds or the places where they spent most time. In each case, the crossing was situated directly under the part of the body most affected by arthritis.

Mrs. I.L.M. (wife of a famous industrialist) is very happy that her rheumatism, which had troubled her for many years, disappeared four years ago, immediately after her bed was moved to the other side of her bedroom. A strong GS line was found directly under the place where her bed originally stood.

MULTIPLE SCLEROSIS

Multiple Sclerosis sufferers have been found to improve greatly in many cases by moving out of GS places. Several researchers have found GS lines crossing under the beds of many of the M.S patients involved in the survey.

This year without an attack! In 1977, Dorothy had her first attack of M.S. and was off work for 3 weeks. In 1978, she had a second attack, which was so severe she had to spend 4 months in hospital and was treated with Cortisone. Dorothy spent 3-4 months in hospital in 1979, in 1980 and again in 1981. At the end of 1981 it was discovered that there was a crossing of several GS lines, directly under Dorothy's back, where she slept in bed. Dorothy's bed was moved to a neutral place completely free of GS lines and from 1982, she had had no attacks of M.S.

TUMOUR ON THE BRAIN

A boy of 10 had a tumour on the Hypothalamus, which could not be operated on. He grew so big (like a 'Michelin Man') that he lay awake in discomfort every night, but his weight was so great, that it was equally distressing for him to be up and about. Then it was discovered that he was sleeping on a crossing of two strong GS lines. The very first night after his bed was moved to a safe place, the boy slept peacefully from 9pm until 6.30 the next morning and remarkably, he lost 2kg in weight in the very

CASES OF OTHER ILLNESSES AND PROBLEMS CAUSED BY GEOPATHIC STRESS

Cancer needs very strong GS to develop, but many other illnesses can develop in GS places.

Thousands of people, after moving their beds away from GS lines, have reported sleeping better, feeling generally fitter, no longer having rheumatic aches, headaches, backaches, feeling nervy and tired and their circulation becomes stable. Below are various cases:

(8) Arthritis

Almost immediately after the Hursts had moved into a new house, Mrs. Hurst got arthritis and died a few years later. Mr. Hurst married again and his second wife also got arthritis. One day, a friend who stayed with them, proved that GS lines ran right under the wife's bed (8). Mrs. Hurst's arthritis disappeared soon after her bed had been moved and now, many years later, she suffers very little.

Mr. Hurst was so impressed with the outcome of finding the GS that he decided to help others, by searching for the GS lines in their homes. One day, a young couple asked him for his help. She was only 30, but suffered from arthritis and had great difficulty in walking. Mr. Hurst found strong GS lines in the couple's bedroom, in a first floor flat. This made Mr. Hurst enquire as to who had lived in the flat previously. It turned out to be a couple, where the husband had died of asthmatic bronchitis and the wife was now in a nursing home, with bad arthritis.

Mr. Hurst also investigated the health of the occupants of the other flats above and found them all, even on the fifth floor, feeling ill in some way or another.

When Mr. & Mrs. Hurst visited some friends, Mrs. Hurst sat in a corner armchair and soon complained about feeling cold around her legs. A search soon proved the presence of GS under the chair. The wife in the house said she could not sit in the chair without getting pains in her knees - the chair was moved. As previously mentioned, watch out where your favourite T.V. chair is standing.

Of the many letters I have received, the following letter from J. Williams, Hinckley, Leics. is a typical one:-

"When we moved into our new home, all was well for a few days, until our eldest son Matthew, started waking up at night, crying and fretting for no apparent reason. However, the broken nights continued, unabated and we knew there was something seriously wrong.

Over the next 9 months, our marriage deteriorated into daylong slanging matches, (although previously, we had not argued in 4 years). I was diagnosed as having the beginnings of arthritis from the hips down, we had constant headaches that could not be cured and my wife had two miscarriages.

Then a friend told us about Geopathic Stress and dowsing. It sounded very dubious until our house was dowsed and found to have only a safe entrance hall and bedroom windowsill, at opposite ends of the house!. It was suggested that we try a strong neutraliser for a week and see what we thought. The same night, the children slept for 13 hours each. Succeeding days found my leg pains disappeared completely, headaches went and eventually, my wife's periods returned to normal. We have now purchased a unit and have returned to vibrant health and married bliss, as we originally were, within a period of 2-3 weeks. Thank you

first week after moving his bed.

Tuberculosis

DEPRESSION

Millions of people feel depressed. In nearly all the cases where they have come to me for help they were GS and felt so much better a after moving their bed away from Geopathic Stress.

As many as 23% of women and 16% of men are suffering from depression or anxiety at any one time, according to NHS figures. In nearly all cases, the people are sleeping and or working in a Geopathically Stressed place.

It is thought that the number of men with the condition could be higher, because men can be less inclined to admit they have a problem and avoid seeing their doctor.

Mrs. H, happily married, had frequent nightmares, fits of crying and suicidal thoughts, all without any apparent reason. After her bed was moved from a Geopathic Stress place (A), it took a mere eight days for her to begin sleeping soundly again and generally regain her sense of well being and now she tells everyone how happy she is.

DIVORCE

I have now spoken to many thousands of people with Geopathic Stress and estimate 50% of the women over 35, who are Geopathically Stressed are divorcees - as we all know, this is way above the average. I am convinced that Geopathic Stress is one of the main causes of divorce. One couple confirmed they stopped arguing within 10 minutes of a strong neutraliser installed, but they started arguing again soon after the Geopathic Stress neutraliser was removed from home. The neutraliser soon came back again! (Bed without neutraliser B)

ASTHMA

Manfred suffered severely from asthma and attacks of near suffocation. After his bed was moved away from the influence of GS, his health immediately improved. (Bed first position C)

NOSEBLEEDING

A college student was suffering from chronic and dangerous nosebleeds, which landed her in hospital several times. They only ceased when her bed was moved to a neutral place. (Bed before moved D)

TUBERCULOSIS

A patient had been suffering for 10 years without any hope of cure, even after two extended stays in hospital, BUT the patient recovered shortly after the bed was moved at home.

Bed first position (E).

POST VIRAL FATIGUE SYNDROM (ME)

Geopathic Stress is nearly always present if you suffer from ME (Myalgic Encephalomyelitis). It usually starts of with you getting a virus such as glandular fever, an emotional shock or accident. Roger Rose FIMLS.MAA MS BioMed SAAC, was a well known practitioner in Dunstable, Beds, who treated many sufferers of ME and claimed a very high success rate. Roger found all ME patients were Geopathically Stressed and maintained this had to be addressed before any progress could be made with ME as well as other illnesses. The Geopathic Stress attacks the immune system and the Spleen and Thyroid are nearly always found weak. The symptoms of ME include:

Severe muscle pain and fatigue, exhaustion following even the smallest exertion, be it physical or mental. Headaches, dizziness, inability to concentrate, over sensitivity to temperature change. Irritability, lack of patience, complete and utter wretchedness, to name but a few.

"Dear Rolf, our 19 year old daughter Clair has been suffering from ME for may years, she always slept badly. On your advice, we moved her bed as you had suggested (from 'A' to 'B'). The first night she went to sleep straight away for the first time in years and slept like a baby all night. This has not only improved her health, but Clair can now study for about 20 minutes most days. Before she could hardly get from her bedroom to the lounge and could only study once a week for 15 minutes. Thank you for all your help. Best wishes, Ann Johnson (mother)".

MENSTRUATION AND PMS

A 22 year old girl had always been perfectly healthy until, soon after moving into a new flat, she began to have exceedingly heavy periods, which sometimes lasted for three weeks at a time, with only a 6-8 day break between. She became very run down. Several gynaecologists prescribed different drugs, with no lasting effects and it was eventually decided that an operation was necessary. After moving her bed to (2) the bleeding ceased after two days and did not begin again for another 8 weeks. From then on, she had regular periods of 3-5 days.

Many women have reported their PMS has very much improved after they have moved their bed away from Geopathic Stress.

SEX

Geopathic Stress decreases the production of sex hormone testosterone in women. This directly interferes with libido (desire for sex) and arousal (physical response to sexual stimulation) This can also delay ovulation and menstruation and can even cease completely. Geopathic Stress can also affect men's libido.

MENINGITIS

From a convent in Austria come the following case histories, all involving one sleeping place affected by Geopathic Stress:

Sister M had a mastectomy operation and recovered fully after she moved to another sleeping place. Sister F took over the room and slept in the bed (F) for the next 5 years. She soon became ill with headaches and developed meningitis and only recovered after she moved to another convent. Sister N was the next to sleep in the original bed. Over the next 12 years she had 3 operations for cancer of the colon. Again she only improved in health after moving to another sleeping place.

HEART ATTACK, CANCER, KIDNEY STONES

A mother had died from a heart attack and her daughter took over the bed. The daughter consequently underwent surgery for breast cancer, kidney stones and had a disc operation. The daughter's doctor asked for her sleeping place (G) to be examined and on finding strong, GS lines, suggested that the bed be moved. He was happy to report she had a very quick recovery.

CARDIAC ARREST

Mr. E, who died suddenly, after a cardiac arrest, had been sleeping in the same place for two years (H). A doctor, who was the previous occupant of the bed, was frequently ill with diabetes, gallbladder trouble, pneumonia and abscesses. The new owner of the flat had the property dowsed and made sure the bed was placed in a safe place - he remained perfectly healthy.

(F)

All Nurs ill.

(G)

Heart Attack

(H)

Cardiac Arrest

KIDNEY PROBLEMS

Teenager Pia had for years been treated for kidney problems, without any success. Treatment by a practitioner of complementary medicine did improve Pia's health, but he was not satisfied and said one day to her parents, 'I feel your girl is sleeping in a Geopathic Stressed place'.

The family were sceptical, but then they met the previous owner of their house, who told them that a water vein ran under the house and that its original owner had died of throat cancer, at the age of 40. He himself had sold the house because his wife had also died of cancer of the throat.

A dowser found a very strong GS line running under the daughter's bed (see drawing below). It was impossible to sleep anywhere in the room without being affected, so Pia's bed was

moved to another room.

Within a month, Pia's health had improved immensely. Her headaches were almost gone. Aches in her shoulders and neck had completely disappeared. Before, Pia had always been tired. As soon as she came home from school, she fell on to her bed and had great difficulty in getting up again. This unnatural tiredness had now completely disappeared. Pia, after so many years of illness, became a normal, lively teenager.

Pia's parents' double bed was found to have a GS line running under it. After the bed had been moved, the father's morning tiredness disappeared and he no longer had aches and pains in all his joints when he got up.

GS line in
Pia's bedroom

GS lines in

bedroom.

BIPOLAR DISORDER

In all cases of bipolar disorder that I have investigated, the person has been very Geopathically Stressed. You can almost say that bipolar disorder is another word for Geopathic Stress.

DEMENTIA AND ALZHEIMER'S

In most cases people who are diagnosed with dementia or Alzheimer's are sleeping in a Geopathic Stress place and are affected by the other BIG FOUR- Micro-parasites, low in Q10 and low in acid alkaline balance.

& possibly a hydro loop

EPILEPSY WRONGLY DIAGNOSED

It is estimated 25% of people who are diagnosed as epileptic are wrongly diagnosed and the main cause of the epileptic symptoms is Geopathic Stress.

A healthy one-year-old Peter was moved out of his parent's Geopathic Stress-free bedroom, into his own bedroom. Within a few weeks he had such a severe attack of epilepsy he was rushed to hospital. When he eventually came home he was on heavy anti-epilepsy drugs. Peter's mother contacted me and we found a safe place for Peter to sleep. He was gradually taken off his drugs over a one-year period. Peter is now a perfectly healthy 6 years old.

23-year-old Andrew had suddenly become symptom-free after his mother stopped his anti-epilepsy drugs. From the time he became epileptic as a small boy and started his drugs he became a Zombie. On checking, I found he slept in a very GS place as a small boy, but by chance, had started sleeping in a good place later on. It was not before his drugs were stopped that the benefit of sleeping in a GS-free place had a good effect. His mother said "I now have a son back, but for almost 20 years I had no son, due to not knowing about Geopathic Stress and how anti-epilepsy drugs could prevent him being well"

Steven, 34 years old, was getting 6-8 Epilepsy fits a day. He took my advice and moved his bed as below and he only got one mild Epilepsy fit the following week. Stephen has now recovered completely as he has come off his Epilepsy drugs.

Soon after the family moved to a new home, Ingrid's schoolwork began to suffer. She had frequent headaches and finally three attacks diagnosed as epilepsy. A spell in hospital and heavy doses of drugs halted the attacks, but the headaches continued. Ingrid was found to be sleeping with two GS lines crossing her head and so her bed was moved immediately. The headaches disappeared, Ingrid's condition improved quickly and her schoolwork picked up again. The neurologist treating Ingrid was reported to be surprised at such a rapid improvement.

How many more sufferers of Epilepsy could be relieved if they were not Geopathically Stressed and got off their medication? Maybe as many as 23,000 in the UK!

SUICIDE

BLACK CLOUDS

In every case of suicide I have checked the person was sleeping in a very Geopathic Stress place.

In 2013 a lot of youngsters committed suicide and it was blamed on bullying. They were all sleeping with a very strong Geopathic Stress line which run through their heads.

Here are some of the cases.

Chelsea
13 years old

Anthony
16 years old

Sinead
15 years old

Hannah
14 years old

Lizzy
14 years old

Daniel
16 years old

Martin
16 years old

Joshua
15 years old

Tallulah

* One every 40 seconds
800,000 people committed suicide every year in the world. All were sleeping in very Geopathic Stress places.

* Prisons
All six prisoners who committed suicide at Wormwood Scrubs Prison in 1913 slept in a bed badly affected by Geopathic Stress

ROAD RAGE

Van driver Colin Scarisbrick, tailgate school care-taker Jeff Argent before deliberately ramming his car. The impact sent Mr Argent's Clio crashing into a lamppost and Mr Argent, a father of two children, died at the scene in Merseyside.

After Scarisbrick was found guilty of causing death by dangerous driving it emerged that he had more than 30 motoring convictions including causing the death of Damien Tudor, father of of one child, after driving at speeds of up to 100mph through the village of Ystalyfera near Swansea. Scarisbrick had slept all his life in very Geopathic Stress places.

Colin Scarisbrick's
last bed before prison.

SERIAL KILLERS

All the mass murdered I have checked back on, all slept in very Geopathic Stress places most of their lives. Here are just a few examples.

A. Peter Sutcliffe The "Yorkshire Ripper" savagely attacked seven women and brutally murdered 13 women.

B. Dr. Harold Shipman is credited with killing over 250 patients.

Dennis Nielsen the "Muswell Hill Murderer" murdered at least 15 people at two address.

C. 23 Cranley Gardens

D. 195 Melses Avenue

E. John Reginald Christie the "Rillington Killer" confessed to killing seven people

F. Anders Bakring Breirik from Norway killer 77 people, most young people, in Oslo and the island of Utøya

CASES WHERE BEDS HAVE BEEN MOVED AWAY FROM GEOPATHIC STRESS.

NEW BED
LOCATION

GS lines

BEFORE MOVING THE BEDS

A No problems

B Headache/migraine, difficulty in finding rest and relaxation in bed, feeling drained and without energy in the morning.

AFTER MOVING THE BEDS

C Only had headache once

BEFORE MOVING THE BEDS

A Swollen legs and restlessness

B Cancer of the stomach

AFTER MOVING THE BEDS

C Swellings disappeared within a week, bed now a restful place.

D The cancer better - the tumour reduced by 50%.
Depression disappeared.

BEFORE MOVING THE BEDS

A Rheumatism in legs and cold toes at night.

B Two operation for ulcers, problems with the liver, stones in the gall bladder, insomnia.

AFTER MOVING THE BEDS

C No improvement for the first 3 months. Thereafter a gradual improvement over the next 3 months, after which the rheumatism disappeared completely.

D Has slept right through the night since the bed was moved and wakes up refreshed in the morning.
No problems with the stomach.

Although the impetus for this vast research arose from concern for the health and progress of school children, the summary of case histories shows a clear connection between GS and serious illness, including M.S., cancer, skin diseases, diabetes and epilepsy. For example, when Kathe examined the beds of 500 people with benign and malignant tumours, the now familiar pattern emerged, all, without exceptions were situated in strong GS places. Only 5% of the sleeping places occupied by healthy people were found to be affected by GS and they were mainly working outdoors in the mountains during the day.

Kate Bachler's book 'Earth Radiation' became a best seller in Germany and Austria and she was frequently asked to speak at universities and medical congresses all over the world, so this gives some indication of the value placed on her research.

A very high proportion of children, who continuously play truant or who are refused in ordinary schools due to misbehaviour, are GS. Class teachers in GS schools have a high rate of absenteeism.

PROTECTION AND NEUTRALISERS

WORK \$100

It is very important to note you cannot heal or eliminate Geopathic Stress on site or from a distance. Any improvement only lasts few weeks if at all, as you are dealing with vibrations. However there are various means of protection against GS lines such as:

1. Place between the bed base and mattress

Thick plastic sheets (overlapping dustbin liners for instance).

Aluminium Kitchen foil with shiny side downward (can be stapled onto cardboard for easy insertion under mattress).

Place 6 wine bottle corks under each bed. Replace after three weeks with 6 other corks, wash the corks in washing up liquid before using again.

These are immediate, but short-term protection methods and will only block the GS for a week or two. After that time, the protection should be replaced with new ones.

All these protection methods will only protect you while in bed, not if you are sitting or standing in stressful places. If sitting in a stressful spot at the office, sitting on a fresh newspaper each day may help.

None of the above methods will be sufficient in badly affected places.

2. Over the years, many devices designed to neutralize the effects of Geopathic Stress have been experimented with. Most devices have not been strong enough or have lost their potency over a period of time. Some have even been dangerous, creating additional stresses of their own. Many needed to be installed by dowsers and be checked regularly for effectiveness. A device called the RadiTech has overcome the problems, which hindered the success of many neutralisers. The RadiTech is quite simply hang on the wall and neutralises the whole building. In large buildings including offices, industrial buildings, supermarket or in large buildings/farms more than one RadiTech may be needed

Mr. Simpson installed a RadiTech at his home without telling his family. The next morning his mother-in-law told him last night she had the best sleep for a long time.

One farmer who specialises in rearing calves, use to lose one calf on average every week. After installing a RadiTech he only lost one calf the following year.

IT IS ALWAYS BEST TO MOVE YOUR BED AWAY FROM GEOPATHIC STRESS, TO BE ABSOLUTELY SAFE, as some protective methods may not last and you cannot put patients with cancer or any other serious illness, at risk. Some people have asked why people who have had or have cancer should move their bed into a stress free place if they install a strong neutraliser. The answer is 'even if you take an effective antidote (strong neutraliser), it is far better not to have taken the poison (GS) in the first place'. However a neutraliser will eliminate the GS all over the home and make it feel calmer.

\$100

THE FUTURE

MUST

The effects of Geopathic Stress on health must become common knowledge and part of daily life, like personal hygiene. This can only come about if as many people as possible learn to locate GS.

Few people are completely unable to find GS with L rods and the muscle test; even people who don't believe in GS find them. Some people are more sensitive and can experience the effects of the GS more strongly than others.

It is worthwhile forming groups to find the person who can locate GS most easily. REMEMBER, if you are only 50% good at detecting GS, it is better than nothing. A combination of rod dowsing, muscle testing and pendulum dowsing should enable you to locate any really badly affected spots in your home and with experience, you will refine your techniques and learn to measure the strength of the GS lines.

If a person is checking someone else's house, the method should be taught to the occupier, so that he or she in turn can help others. Otherwise we run the risk that the knowledge will be forgotten and it will take longer before the knowledge is disseminated and everyone knows how to test their environment - and consequently improve the quality of life for themselves and others.

Check motel rooms R-S & Red north

People often have a tendency to become excited when the scope of this knowledge is realized. It can sound too fantastic to those you are trying to help. It is therefore important to explain the matter objectively, in a down to earth manner and to press on steadily and constantly with it. In this way we shall achieve most.

Let it not be a passing 'party game'. Make it a continuous habit to search and protect wherever you go in the world. You can always find a wire coat hanger - or use the muscle test.

EXPLANATIONS

Many explanations have been given on the theory of Geopathic Stress and its harmful effect on our health. Here are some of the theories I find most plausible:

Continuous signals from our brain control our body and enable it to function correctly at all times. Concentrated GS blot out these signals so strongly that the flow of information to the cells, glands and organs, is much reduced. This has an adverse effect on the body. The stronger the disturbance, the weaker the flow of information and the more marked the symptoms and pains become.

Geopathic Stress has a strong effect on the correct functioning of the lymphatic system. The lymph fluid transports lymphocytes and antibodies, which are continuously patrolling through the body, ready to fight and destroy any foreign matter, such as bacteria, viruses, parasites or cancer cells. If the lymphatic system is not healthy, it is unable to destroy foreign matter, thus enabling cancer cells to grow and multiply. Your whole immune system is weakened.

Dr. W. Stark of Salzburg put forward the following explanation. Many aspects of human metabolism depend on bio-electric processes. Electro-physiological studies show that the assimilation of nutrients from the intestines into the lymph and bloodstream depends on a polarization of electrical charges. On one side of the cell membrane are positive charges (+), on the other side are negative charges (-). Nutrients are transported from the intestines into the lymph and bloodstream, when positive charges are allowed to re-enter the cell. Geopathic Stress will disturb this polarity in living cells.

Geopathic Stress is mainly caused by narrow paths of water about 200 to 300 ft (60 to 90 meters) below ground (Also on top of mountains). The narrow water path creates an electromagnetic field which distorts the earth's natural vibrations, as these pass through the water. It is particularly the 7,83 Hz (cycles per second) which are beneficial and which we have lived with for millions of years. This is also the optimum part of the Shumann waves and Alpha vibrations. It has been confirmed by NASA the 7,83 Hz vibrations are incorporated into space crafts, otherwise the astronauts could only live in space a short time. Certain mineral concentrations, fault lines, moving underground plateaux and underground cavities can also disturb the natural earth vibrations.

Strong Geopathic Stress can cause the body's vibrations to rise to as high as 266Hz.

The USA scientist George Lakowsky confirmed in the thirties that humans (as well as animals) have less chance fighting bacteria, viruses and parasites at higher than normal vibrations. Bacteria and viruses vibrate above 150 Hz and parasites above 180 Hz, so they love humans and animals which vibrate at high levels.

You are welcome to come up with your own theories, but you must not make the great mistake, namely, wait for the right explanation before you accept that GS from the earth has an adverse effect on your health. It can be a very serious mistake to be ruled by the idea that everything must be explained by scientific laws and principles before it is accepted as valid. Remember, you accept (and use) electricity and gravity, but no explanation for either has been universally accepted. An old proverb says, "He who can never retract an opinion, loves himself more than the truth". *and kids!!*

How does GS then react on the dowsing rods etc.? The left side of your brain deals with language and logic and makes you move your muscles when you wish to. The right side of the brain deals with recognition and intuition. In dowsing, the right brain presumably has unusual powers of perception and knows when it is above a GS line, but it can only pass on this information through the involuntary nervous system which causes the muscles to tense and make the dowsing rod move, the pendulum swing, or unlocks the arm in the muscle test.

BE YOUR OWN DETECTIVE

It is possible to locate Geopathic Stress by careful observation of your environment. The plants and trees in and around your home, your pets and other animals and insects, the condition of the building itself and the responses of the people who live there, can all give you some indication that there is Geopathic Stress present.

Some trees and plants cannot grow well in GS places, while others actually enjoy the influence of GS and grow even better. Many trees and plants react to GS by becoming stunted or diseased or they may simply die. Trees with 'cancerous' growths are sure to be growing over on GS places and trees that 'lean' unnaturally, even against the wind, are actually attempting to grow away from the influence of a GS line.

Important Read

GS SEEKERS AND GS AVOIDERS

The following trees and plants cannot thrive in GS places and have been named 'GS AVOIDERS'.

PLANTS: Roses, Sunflowers, Lilies, Begonias, Azaleas, Cacti, Privet Hedges, Red and Black currant Bushes, Cucumber, Celery, Onions and Maize.

TREES: Apple, Pear, Beech, Ash, Linden, Lilac and nut bearing trees.

Certain ANIMALS will never willingly settle in a GS place: Dogs, Horses, Cows, Sheep, Pigs and Mice. Chickens and birds will not nest in GS places and when an aquarium stands in a GS place, the fish are likely to eat their own eggs. If your dog likes sleeping on your bed, then you are most likely sleeping in a safe place. However it does not always indicate your bed is free. Maybe it likes its master's bed above everything else!

Equally there are plants, trees and animals which always thrive on Geopathic Stress. The 'GS SEEKERS' are:

PLANTS: Asparagus, Mushrooms, Aralia, Mistletoe and Medicinal Herbs.

TREES: Oak and Elderberry.

ANIMALS: Ants, Bees and Wasps. Beetles and Termites nearly always build nests where GS lines cross. Bees produce many times more honey when their beehive is placed in a GS place.

ALSO: Bacteria, viruses and parasites.

As Oak Trees grow best over subterranean water crossing, you will seldom find an Oak more than fifty years old which is not growing in a strong GS place. Lightning is attracted to spots where two underground water veins cross, water being an excellent conductor of electricity and so Oaks are particularly prone to being struck by lightning. A forest research project revealed that Oaks, which comprised only 11% of the trees in a certain forest, accounted for 58% of all the lightning casualties. The forest was 70% Beech, but only 6% of these were damaged by lightning. So, never stand under an Oak or any other GS seeking tree in a thunderstorm. Choose a mature Beech!

Even though oak trees like GS it nearly always looks as if they suffer with many branches growing very crooked and look unhealthy.

Cats are their own worst enemy. For some unknown reason they love sleeping in GS places and if the home is badly affected, it is most likely the cat will die young. One Vet claims many cats die of Leukaemia when they are 7-8 years old.

If your cat always sleeps on your bed in preference to any other warm and comfortable place in the house, it is very likely that your bed is GS, or you and your cat like sleeping together.

It is very important for farmers that their poultry and other livestock are kept away from GS, particularly if the animals spend long periods in restricted areas. In times gone by, farms badly affected by Geopathic Stress and which consequently lost many animals, were supposedly bewitched and a culprit was sought. Now farms have observed that Geopathically Stressed cows tend to lose their natural sheen, more often get Mastitis, have a low milk yield and 'cell count' goes up. Calves are very sensitive and if affected, will not thrive and more likely to get pneumonia.

Horses, if mainly kept in a GS stable, their coats will also eventually lose the natural sheen,

about foals

they will go off their food and lose weight. After a time, affected horses have succumbed to rheumatism and cramps.

Racehorses are often kept in the same stable for 23 hours a day to prevent injuries. So a GS stable has a very bad effect on the racehorse in it.

Pigs react strongly to GS and develop black spots. Piglets become restless, wean poorly and have a higher death rate.

Some people have noticed that cut flowers die much sooner if standing in a GS place.

From my own experience, I discovered that the bed in my guest room (my visitors never slept peacefully there) was directly in line with an ants' nest, against the outside wall of the house. When I followed this Geopathic Stress line through the garden, I found it connected with the only spot in a line of rose bushes where roses refused to grow and then continued through two rows of tall Cypress trees at just the place where the trees are conspicuously stunted

Within 6 months of installing a neutraliser, the stunted Cypress trees doubled their height, but unfortunately this took a nice view over South London away from us !!!

10-year-old Joe was unwilling to go to bed or get up in the morning, not an uncommon problem except that when Joe's bed was moved to another room, his sleeping patterns became normal and he became the first person to be up and about every morning. As you can see from the diagram, the bed was in line with an ants' nest and a healthy Elderberry tree; a strong GS line runs through all these points.

The condition of the rooms you live in can also indicate the presence of GS lines. Cracked, damp or crumbling walls and floors are all strong indications. Cracks in the ceiling often run directly over GS lines. But not all cracks are due to GS.

* Be aware of your own reactions. Do you sit down in your favourite chair and soon fall asleep, or feel unwilling to get up again? Do you wake up in the morning all curled up in one corner of the bed or do you sleepwalk?

Below are some of the reactions you might notice if you have been sleeping or staying in GS places, for any length of time. Don't forget the time you spend at your place of work, sitting at the same desk for instance.

HOW DO I KNOW IF I AM GEOPATHIC STRESSED

If you cannot shake off an illness, depression or feeling below par, ask yourself:

- 1 Did my health problem begin shortly after moving into this home or place of work?
- 2 Do I feel better when I am away from the home or place of work?
- 3 Do any of my family feel uneasy about the "atmosphere" at home?
- 4 Did the previous occupant/s suffer from any serious illness?
- 5 Does the illness seem to be worse during autumn or spring or wet stormy weather? (When underground water may be flowing at higher velocity)
- 6 Where there any nearby disturbances, which may have caused underground water veins to flow into different channels under my house prior to my illness? (Landslides, building and road work, working quarries and mines etc.)
- 7 Does my home or any part of it feel unnaturally cold or damp?
- 8 As a family are we nearly always arguing at home but generally not when away from home?

Many therapists now confirm that, when treating patients who continue to be affected by GS during periods of sleep, rest or work, the patient's response to treatment is sluggish, or they reach a 'plateau' beyond which they do not progress. In other words no therapy works 100%.

FARMERS BEWARE

Farmers observing the behaviour of their livestock have noticed certain places in cowsheds, pigsties and chicken huts, where animals frequently become ill and die for no apparent reason. From a conference in the U.S.S.R. it was reported that of 35,000 cows suffering with Mastitis, 78% were confirmed in buildings affected by Geopathic Stress - very few cows get mad cow disease unless they are GS.

Farmers, please note where you house your animals.

GOOD NEWS FOR GARDENERS

Geopathic Stress places are very good places to grow herbs which should be picked at time of full moon, not necessarily at night, when the GS is stronger. Perhaps we are dealing with a type of homeopathic effect? GS places are also very good places to put a compost heap.

HOW CAN I TEST IF A PERSON HAS GEOPATHIC STRESS

How a person looks and feels is often an indication of whether they are affected by GS. They may look pale and feel run-down, tired, sad, depressed or have no appetite.

You can detect if you are Geopathically Stressed by means of:

1. **THE VEGA TEST** - This test, which can check many other things connected with our bodies, is now carried out by numerous health practitioners.
2. **PENDULUM DOWSING** - If you are able to use this method, it is quick, accessible and accurate and progress can be monitored on the spot or from a distance on a continual basis.
3. **MUSCLE TEST** - with another person
4. **ELECTRO-ACUPUNCTURE**
5. **KINESIOLOGY** - This tests various muscles on your body and carried out by qualified practitioners.
6. **BLOOD CELL ANALYSIS** - If the blood cells are clustered together it is a good indication that you are Geopathic Stressed

A

B

Steve's blood cells show clustering, when inspected under a powerful microscope, after he had sat in a Geopathic Stress place for a short while (A). His blood cells were far less clustered after he had his feet and hands on a powerful GS neutraliser for 15 minutes (B).

Thousands of practitioners world-wide - both orthodox and alternative - now test their patients for Geopathic Stress early in the treatment process and so can quickly resolve any adverse environmental influences which would hinder progress. So, if you are unwell over a long period, ask your therapist to test you for Geopathic Stress.

HOW YOU CAN FIND A GOOD PLACE TO SLEEP

It is important not only to locate Geopathic Stress and avoid it BUT also to find the best place to sleep, sit and work. A competent dowser should never leave a home without showing the best places available.

I know it may be difficult to comprehend, if you have not dowsed before, that it is what you concentrate on that determines what you find by dowsing. So all you have to do is switch your concentration from finding GS places to finding good places. Just as a dowser searching for water, can find the underground water stream. He can also determine the depth, flow rate and if the water is suitable for drinking, all by concentrating on exactly what he wants to find.

Put yourself in a quiet and peaceful state and concentrate on finding the best place for your bed, chair or workplace. Stand in the doorway of the room and point your finger or direct your eyes slowly round the room, from one side to the other, in a 180° arc whilst holding your pendulum - an L-Rod can also be used. When you are finally pointing or looking in the right direction, your pendulum will swing back and forward, in the direction of the 'good place', or you may find that your pendulum gives you your 'yes' response. (Remember, dowsing is about what feels right to you). Walk in the direction indicated and your pendulum will indicate 'yes' when you reach the good place. Now you should try to dowse for the boundaries of the good area. Dowsing with a pendulum requires patience, concentration and practice, so don't be discouraged if your results are not all clear the first time.

You may also ask your pendulum or L-rod to point out in the direction of a good place. Then walk in that direction until the pendulum or rods indicate (by pendulum moving sideways or rotating and the rods moving sideways) you have reached the best place. Now dowse for the boundaries of the good area

MUSCLE TEST

You can use this test to check the results of your dowsing, but the Muscle Test is very effective on its own, particularly for testing specific places. When you stand on a specific spot and ask the question 'Am I standing in a GS place?' a 'weak arm' indicates you are; however, if your arm remains 'strong', then that spot is free of GS and is a safe place.

FOR BETTER OR WORSE

Try sleeping in different locations, move the bed around the room and note any difference in your sleeping pattern, how you feel when you wake up or improvement in your general health and well being. You have absolutely nothing to lose by experimenting with sleeping in different places until you find a place that suits you. You may only need to move your bed three to six feet (one to two meters) to experience relief from health problems.

LOCATION TEST

Some people can find 'good places' for themselves without dowsing, quickly sensing the atmosphere and even the source of any disturbance present. You may like to try this for yourself. Choose a time when you are in a relaxed and peaceful mood, or you could practice a relaxation technique to prepare yourself. Stand or sit on a wooden chair, close your eyes and stand or sit in different areas of the room. If you feel perfectly well after 10 minutes, then it is fine to spend long periods of time in that place. Any uncomfortable sensations such as anxiety, 'butterflies', tingling, pins and needles, cramps, palpitation, aches or pains, especially around the heart, difficulty with breathing or lethargy, are all indications that you are sitting in an unhealthy place. This is a good way of testing for sensitive people and for those with

DO NOT BE STUBBORN

9100 A bed, chair or desk does not occupy very much space so it should not be too difficult to arrange your home in such a way that all the chairs and beds are located in 'good places'. Very often, bunk beds will solve the problem of finding a good place for two children in one bedroom. So don't be stubborn if the 'good places' are not convenient places. This is sometimes the case - but what is more important in life than YOUR HEALTH and you are of little help to others if you are not in good physical and emotional health yourself. Fitting castors to beds or chairs will enable you to move them to good places when in use. Ole Hovman said "I would rather sleep in a chicken hut if my bedroom is found unsuitable to sleep in". Yes, you may even have to move house if your home is very badly affected by Geopathic Stress, but it is rare that the environment cannot be improved by a powerful neutraliser.

Tom did in fact sleep in his chicken hut at the end of his garden rather than sleep in his house, which he knew was Geopathic Stressed

It has been shown in thousands of cases that elderly people who have enjoyed good health all their lives, have always slept in places free from Geopathic Stress.

BEDS

Tests with a Geomagnetometer have shown that if any part of the bed with metal base and springs, or interior springs in a mattress, is crossed by GS lines, then the whole bed becomes affected. A waterbed can have the same effect, so it is preferable to sleep in a wooden framed bed and use a mattress without internal metal springs. If you are sensitive to environment, it is advisable to place the bed a little way from the walls, which carry a small electrical charge (from wiring) and clear of electrical sockets.

Apart from Geopathic Stress, it is known that your delicate hormone balance can be upset by sleeping close to a high Electro Magnetic Field (EMF) which comes from high power cables, transformers and home appliances such as: fridges, microwave ovens, televisions, computers, radios, loudspeakers, electrical and battery operated alarm clocks, electric boilers, remote controls from TVs, heated water beds, etc. and particularly mobile telephones, as they contain powerful receivers which are switched on continually. Also ensure your electric blanket is unplugged when you are lying in your bed. BUT if you are not Geopathically Stressed, the EMF will not affect you nearly as much.

OTHER ENVIRONMENTAL STRESSES

Some people find it tiring to work under fluorescent lights. High frequency fluorescent lighting can also be disturbing, but when the new wide spectrum fluorescent lights were installed in classrooms to replace the old ones, absenteeism amongst the schoolchildren dropped. As mentioned previously, various Electricity Supply Boards are at this moment investigating claims that electromagnetic fields from overhead power cables, transformers, etc. create or compound abnormal behaviour of living cells, but in many cases, the damaging effects of other environmental stresses are greatly increased when Geopathic Stress is also present.

HOSPITAL BEDS

It is important that hospital beds always stand in 'good places' so that successful operations are not followed by complications such as pneumonia and sepsis. It is equally important that operating tables are also in a 'good place'; not only to benefit the patient and ensure no

interference to breathing and circulation, but also it's in the interest of the surgeon. Peter was brought into an intensive care unit after a very bad motor accident and almost died. For some reason he was transferred into another room and made a remarkable recovery within 24 hours. The first room was very Geopathic Stressed.

Nurses often talk among themselves that there are certain beds which have a 'reputation' because more patients take longer to recover or die in these beds than in others on the ward.

BRAIN TUMOUR CANCER

Beverly had just had a brain tumour operation. The surgeon told Bob, his wife had only days to live. Bob could feel Beverly's bed was in a very Geopathic Stressed place. Bob managed to get his wife's bed moved into a stress-free place (see diagram). Beverly recovered within days and left hospital shortly afterwards. A pot plant next to Beverly's original bed position almost died, but recovered fully, when placed next to her new bed position.

NEVER BACK TO THE OLD BED

UNDER NO CIRCUMSTANCES MUST A PATIENT WITH CANCER OR ANY OTHER SERIOUS ILLNESS BE ALLOWED TO RETURN TO THEIR OLD SLEEPING PLACE. This sensible precaution is supported by Dr. Nothangel and Dr. Hoehenegg in Vienna and Dr. Sauerbruch in Berlin. They say that there is hardly any point in operating unless the influence of Geopathic Stress is also removed.

NOBODY else should occupy a bed in a place where a cancer patient has been sleeping for any length of time.

The cancer patient's new sleeping place must be checked, along with the position of their favourite chair and any other place where they will spend long periods of time. These places must be free of Geopathic Stress.

ADVANTAGES OF ONLY LOOKING FOR GOOD PLACES

- * It is a quicker and a more direct method.
- * It is not stressful.
- * The inhabitants of the house you are searching don't get upset about GS.
- * You will have achieved your object 'in one'.

① I DO NOT FEEL MUCH BETTER after sleeping, sitting and working in a Geopathic Stress free place!

Preventing being GS is the first and most important step in getting better from being ill, run down and / or depressed.

BUT it is also vital you have a healthy diet; get enough vitamins, minerals etc, exercise and you are free of micro-parasites, have enough O10 and your acid alkaline balance correct.

VITAMINS AND MINERALS

As previously explained while you are sleeping in a GS place, your brain spends most of the time fighting GS and doing the most vital healing of your organs, creating 80% of the new blood cells but has to be put off dealing with your digestive system 100%.

It may only have had time to give instructions to absorb 50% of what it could absorb of vitamins, minerals, enzymes, trace elements etc from your food, drinks and supplements. Even if you have a healthy diet after becoming GS free, modern food has been depleted of essential vitamins, minerals etc during the excessive processing including freezing during transport and storage. Farmland has also been depleted of vital minerals such as magnesium and selenium during cultivation over hundreds of years, without being replaced.

EXERCISE

Try and go for a brisk walk for 20 to 40 minutes say three times a week.

The most efficient means of exercise is on a rebounder which is smaller and stiffer than a trampoline. You can rebound even if you are confined to a wheelchair by someone bouncing behind you when you sit on the rebounder. It is also very good if you have had injuries or suffer from arthritis, rheumatism, asthma, ME, diabetes, Multiple Sclerosis, back pain, cystic fibrosis, Parkinson's disease and heart complaints. A rebounder is much more effective and cheaper than a cycling, running or rowing machine and you are less likely to get bored as you are changing your exercise routine all the time. Make sure you get a good quality rebounder

which will give you the best exercise and last for years.

By rebounding you increase gravity by 25% both on the down and the up movement, revitalising your lymph system (which has no pump) and helping to dispose of toxins from your body.

Six minutes on a rebounder is equivalent to walking 3 miles. 10 minutes is equal to jogging for 30 minutes and you do not have to change into running gear, put up with bad weather and a 40% chance of damaging your knees.

Many fit people over 90 rebound 10 minutes every day. You can loose 300 calories in 6 minutes and it is the exercise you are most likely to keep up as you can enjoy the exercises to music or watch TV.

THERAPIST

Get to know a health practitioner with a good reputation who also has time to listen to you.

OTHER TIPS

Drink plenty of liquid each day. Best is tap water in the UK as it is alive and fresh. You don't necessarily have to drink 8 full glasses per day (about 2ltr) A good guide is the colour of your urine. If straw colour you are drinking more or less the right amount. If it's very dark you're on the dry side and need more water. If it's light or translucent then drink less.

Watch out for drinks with artificial sweeteners such as Aspartame. Many people can not tolerate fizzy drinks.

Fifteen minutes a day in the sun will prevent vitamin D deficiency and the ultraviolet rays will help kill bacteria, viruses and parasites.

Look forward to something every day.

TOP

The three main 'vitamins' you need when you are eating:

T is for time. Give yourself time to eat. The French are not necessarily healthier because they drink wine, but it relaxes them, so they spend longer eating.

If you eat under stress, your stomach can close down for up to two hours, so you do not benefit from your food.

O is for oxygen. Eat slowly so you can breathe more during eating and more oxygen enters your stomach, making calories burn better and thereby your body gets the maximum benefit from your food. If you do not burn calories properly, they will be stored as fat in your body.

If you eat too quickly and you wish to burn calories more efficiently, take one OxyTech capsule with your main meal. This will give you plenty of extra oxygen.

P is for pleasure. Take pleasure in everything you eat, then your stomach will digest it better, even if you are eating something you know is a little bit 'naughty'! If you are on a diet, have that cream cake of what you long for, now and again. Then you are much more likely to keep a strict diet.

You must feed your soul.

It is not what you eat; it is mainly how you eat it.

Look forward to something every day.

Blessing your food, increases the energy absorption & use.

RESEARCH INTO THE EFFECT OF GEOPATHIC STRESS

I would have thought enough research had already been done over the last 80 years to warrant the medical profession and the big research funds to start an urgent research programme into the harmful effect of GS on our health. Billions of pounds are spent on research into cancer each year, often with very disappointing results. The disease, in its many forms, can now often be detected at an early stage, ensuring a greater chance of successful treatment. Early treatment for many forms of cancer has shown great success and techniques of detection and treatments are being constantly developed and refined. But the number of cancer cases are constantly increasing approximately in line with increased strength of Geopathic Stress in the last 50 years. Even after investing 10 times as much on cancer research and treatments (about £200 billion worldwide per year) as 20 years ago the the death rate from cancer has doubled (in USA from 300,000 to 600,000 per year).

?
→
?
1
It seems totally unrealistic not to spend a tiny fraction of the vast amount of time and money continually invested in cancer research, into study of Geopathic Stress - which seems to be the only common factor in most cases. This would definitely yield significant results. Unfortunately there is no profit in it for pharmaceutical companies to do research into preventing cancer. All testing of new drugs is done by pharmaceutical companies themselves or through university sponsorships. Over US \$24b is spent each year on cancer drugs!!!

As far back as 1929, Gustav Freiherr von Pohl, a German Scientist and one of Germany's most talented dowsers, carried out many investigations which supported his theory that one will not get cancer unless one spends some time in GS places, e.g. lying in one's bed. He devised a scale 1-16 and found that any GS lines above the strength of 9 were cancer inducing. This was proved to the satisfaction of the Central Committee for Cancer Research in Berlin, who subsequently published von Pohl's findings and in 1930, he read a paper to the Medical Congress in Munich, which inspired many doctors to carry out their own research.

In his book 'Earth Currents - Causative Factor Of Cancer And Other Diseases', von Pohl gives an account of how he "drew on to a map of the town of Vilsbiburg (a Bavarian town with a stable population) all the Geopathic Stress lines he could locate by dowsing. He was not familiar with the town and the operation was stringently supervised by Council Officials and the Police, so he could not communicate with anyone and be given pertinent information, which might influence his findings. A doctor then produced the details of the 54 people who had died of cancer since records were kept, which were then compared to von Pohl's map. To the amazement of all present, every single person who had died of cancer had slept for some time in a bed located exactly over GS lines. After this, he investigated the town of Grafenau, with exactly the same results. Later, he returned to Vilsbiburg, where another 11 had died of cancer and all had slept in a GS place.

Von Pohl estimates 1/40th or 2.5% of the earth's surface is effected by GS. So what is the chance factor involved in these experiments? Is it purely coincidence that ALL cases investigated involved people sleeping in a GS affected area? The possibility of chance here is small and the results of these studies were accepted as clear and decisive.

NONE
Many doctors attempted to disprove von Pohl's findings, but none were successful. Dr. Rambeau M.D., while President of the Chamber of Medicine in Marburg, failed over three years to find any cancer patients whose beds were NOT located in a GS place. Numerous scientific studies have since validated von Pohl's theory.

Dr. Hagar, President of the Scientific Association of Medical Doctors, with the help of a professional dowser, Privy Councillor C. Williams, checked the houses of 5,348 people in the town of Stettin, who had died of cancer and found in all cases, that strong GS lines had crossed their homes. Of special interest was a survey of three homes for elderly people in the

town over the previous five years. In the home in which strong GS was found, 38 had died of cancer. In the home with weak GS, 2 had died of cancer. In the home with no GS at all, nobody had died from cancer. In 5 houses built over particularly strong GS lines, he found 38 had died of cancer cases over 21 years!

Peter Ingwersen has helped many people, who wished to know if they slept in GS places. He has investigated about 300 cases and in 98-99% of cases, cancer patients were found to have slept for long periods in GS places.

Dr. H. Nieper MD stated: "92% of all my cancer patients and 75% of my MS patients are Geopathically Stressed". Dr. Nieper was a world-renowned cancer specialist and operates one of the largest cancer practices in the world. Dr. E. Hartmann MD is convinced after treating thousands of cancer patients over 30 years in practice, that CANCER IS A DISEASE OF LOCATION caused by Geopathic Stress.

During a scientific test, Dr. Manfred Curry, A Medical Doctor and Biochemist, searched several houses where cancer patients had previously lived. Dr. Curry did not know the patients, or the details of their illness. None of the patients was in the houses during the search. Four medical Doctors were invited as observers. In other words, all subjective influences on the test had been excluded.

In the first house, Dr. Curry found, by dowsing, two GS lines crossing under a bed and he calculated that if anyone had slept in that bed for any length of time, they would have been affected in the region of the pelvis. One of the medical doctors had to admit with astonishment, that the bed had first been occupied by a mother and later by her daughter-in-law. The mother had died 15 years ago and the daughter-in-law 5 years ago. Both died of cancer of the uterus.

In another house, Dr. Curry found GS lines crossing at the head of a bed. He calculated that the person who had slept in the bed must have had cancer of the throat. He was informed this was correct.

In the third house, a GS line was found at the foot of a bed and Dr. Curry calculated that the previous occupant of the bed had a cancerous tumour in the leg. The patient's doctor confirmed this. All those searched gave the same results when GS lines were found to cross under beds.

Ulrik Hovmand, Son of Ole Hovmand, has visited and in most cases helped thousands of people who had all been suffering from a serious illness, mainly cancer. Ulrik said, "I am astonished by the connection between illnesses and the location of GS lines. The patients I visited did not have to tell me where in their body they had pain or where the illness was. I find out where the GS lines were in relation to their beds and I calculate where the patient has cancer. I am correct in most instances, except in cases of skin cancer. I also find that people, who are stressed are much more likely to get cancer when sleeping in GS places. The GS lines also have a marked effect on inherited mental illness".

Dr. E. Jenny of West Germany, conducted experiments over many years with a total of 24,000 mice, studying their behaviour in Geopathically Stressed places. The mice persistently attempted to escape from their boxes, showed weight loss, were more susceptible to spontaneous and induced tumours, had smaller litters and a higher death rate of young than control groups. See page 91 regarding just discovered "Investigating the affect of Geopathic Stress on animals and plants about 80 years ago".

The America Nobel Prize winner, Melvin Galwin, who studied, amongst other things, the effects of carcinogenic tar on the skin of hamsters, found that the hamsters did not develop cancer as anticipated, until they were kept in Geopathic Stress places.

It is estimated that more than 5,000 Medical doctors in Austria and West Germany, call in dowers to assist with their most severe cases of cancer and long-term illnesses.

At a medical congress in Baden-Baden in 1984, the harmful effect of Geopathic Stress was one of the topics on which most time was spent.

OFFICIAL RESEARCH AT LAST

Under the direction of Dr. Otto Bergmann, a Professor at the University of Vienna, Doctors, Chemists, Physicists and Biologists at the state sponsored "Working Party for Research into Geopathic Stress Sites" have carried out tests on 985 people over two years.

The test people had to sit in a Geopathic Stressed place for 15 minutes. The test people were subjected to a very thorough medical examination, both before and after the test. Tests included blood sedimentation tests, measuring of electric condulance of certain muscle points, of blood pressure, heart beat, breathing, skin resistance and blood circulation. In order to eliminate any 'placebo effects', the tests were organised in a double-blind fashion; neither the examining doctor nor the test people knew whether they had been sitting in a Geographic Stressed place or a neutral place.

462,421 measurements were taken in 6943 individual tests. Although the test people were exposed to Geopathic Stress for only a few minutes, the harmful effect could be registered in most cases. "One can imagine the dire consequences which exposure to Geopathic Stress over many years, could do", wrote Natural Medicine, which is read by doctors all over the world.

In the early 30's, Gustav von Pohl proved the dangers of sleeping in GS places to the complete satisfaction of all who took part in the Cancer Conference in Berlin. Confirmation followed quickly from Dr. Hagar's study of 5,348 cases, again showing that GS has a direct influence on cancer and most other serious illnesses. So it has 'only' taken the Austrian Government 60 years to scientifically investigate the problem.

HOW LONG WILL IT TAKE IN THE U.K. AND THE U.S.A.?

TRAFFIC ACCIDENT AND GEOPATHIC STRESS

Bermuda
triangle

Much scientific work has been going on in the U.S.A., Switzerland, Germany and Austria, to show that traffic accident 'black spots' are often located in areas of very strong Geopathic Stress. The result of this is that in some countries, policemen have been trained in dowsing, warning signs have been put up to warn drivers and A.D.A.C., the West German equivalent of the A.A., have carried out investigations into Geopathic Stress on stretches of road, notorious for accidents.

Detailed research work has been done by Engineer Robert Endros and Professor Karl-Ernst Lotz, of Germany, looking into why a high number of head-on collisions occurring on the same stretch of road for no apparent reason. In most cases, drivers have found themselves on the wrong side of the road and have a head-on collision with another car or lorry, without any evidence of braking or decelerating. In the few cases where drivers have survived, they all report a complete blackout.

The above graph illustrates how head-on collisions occur, after the car has crossed several GS lines within a short span of time.

It has been shown that neutron radiation is concentrated by electrical fields, built up by running underground water. This concentration influences the conductivity and the pH value of the body and thereby affects the cells. The body's endocrine system can counteract this influence, particularly the Adrenal, Thyroid and the Thymus gland and Epiphyses.

The following graph shows the spontaneous reaction of individual glands in a neutral place (1), then the strong reaction in a GS place (2) and the reaction above a further disturbed place after 3 seconds (3). It shows how the adrenaline is overproduced and when suddenly required again, the regeneration is not quick enough to cope with the internal body conditions and that is when the blackout occurs.

The identification and investigation of roads, disturbed by GS, no longer seems a problem with the help of electronic measuring equipment. Neutralisers have been developed, using microwave radiation which disperses the Geopathic Stress lines so they lose their biological effect. The accident rate on one stretch of road was cut from 32 accidents in 2 years, to 1 accident on one year, after installing neutralisers. Neutralisers have also been developed for cars and commercial vehicles.

One woman, who parked her car in a GS place, said she always got a back pain as soon as she got into her car. After she parked her car in a place free of GS she reported she no longer had a back pain when driving.

A combination of you being GS and your car having been parked in a GS place can cause road rage, which has been shown in USA to be responsible for a large percentage of road accidents.

I dowsed a section of the A5 in Bedfordshire where I had been told there had been many vehicles accidents. I found the above GS lines. Then I went into the pub to have lunch and asked the landlord where the many accidents had occurred. He pointed out the two places (marked with black spot) where vehicles entered the dual carriageway. Many roads lead into the A5, where no accidents occur. The hedge at B had stunted growth.

Along Sydenham Hill, London SE19 near where I used to live there have been many fatal accidents at the spots marked with an X, involving vehicles and motorcycles coming from the right after they have crossed three lines of GS. All drivers were GS due to sleeping in GS places.

Christine S from Sudbury, Suffolk had her car parked in a GS place at home.

On December 27th 1997 she had a blackout while driving her car, which resulted in her crashing her car. The car was a write-off, but luckily no one was killed or even badly hurt. As the sketch shows where she had the accident (a known black spot) she had just driven across four GS lines, which used all her adrenaline, causing the blackout. Her neurologist told her she had a mild form of epilepsy and wanted her to take drugs for the rest of her life, which obviously frightened her. She just needs to make sure she does not drive a car, which is Geopathically Stressed.

SICK BUILDING SYNDROME

- Many stressful jobs are mainly caused by stressful places.
- Why spend thousands on new office systems if the staff do not turn up?

For a long time the problem of Sick Building Syndrome (SBS) has puzzled scientists and worried managers all over the world, but at long last you can do something positive about it, at very little cost, saving thousands in reduced absenteeism and gaining efficiency at the same time.

The World Health Organisation has recognised Sick Building Syndrome for almost 20 years and they estimate 30% of offices, hotels, institutions and industrial premises have Sick Building Syndrome causing:

headaches, tension between staff, lethargy, respiratory infection, dry skin and throat, eye symptoms, loss of concentration, depression, stress and fatigue. Ultimately this can cause a high rate of absenteeism, increased staff turnover, low morale, and the waste of industries' most important assets - people.

In a survey by the confederation of British Industry it is estimated 200 million working days were lost through sickness absence in 1998 costing employers more than £10 billion a year in lost earnings equivalent to £426.00 for every employee. This represents 8.5 days per year and just under 4% total working time. I estimate 80% of the absentees were either working in a GS place and/or sleeping in a stressful place and/or dependant family members were Geopathically Stressed.

An office environment is like a bucket. It is half full of Geopathic Stress and you fill it up with the effect from modern building material such as reinforced concrete and plastic in addition to Electro Magnetic Field created by computers, photocopiers etc. and modern indoor fabrics which can give off Radon Gas, together with air conditioners which reduce negative ions, the bucket overflows and you have GS.

If you then remove the Geopathic Stress by sitting and working in a GS free place or installing a strong neutraliser, you have much more space to fill it up with environmental pollution before you get SBS

When strong neutralisers were installed to eliminate the GS this created the following benefits:

- Offices - less tension between staff
- Hotels - customers more comfortable and complain less
- Schools - children easier to teach and control and less bullying
- Leisure Centre - less hooliganism
- Shops - increased sales as customers feel at ease
- Restaurants, Pubs - increase turnover
- Farms - lower death rate among newborn animals, higher fertility rate and better quality milk
- Hospitals - patients recover more quickly

area

2. ✓

Yes

Other solutions to improve the environment in the workplace.

1. Try and use as much natural material as possible such as wood, cork, clay, brick, coconut fibre, cotton, animal hair (carpet squares) etc. There should be as low a 'fleece factor' as possible: ratio of synthetic material to total volume. Wood should be polished with bees wax not silicon or cellulose based polish, which converts wood into a plastic surface.
2. Wear as much natural fabric as possible, such as cotton, linen, wool or silk so your biggest organ - your skin - can breathe and prevent static from the movement of synthetic material.
3. Ensure as much fresh air gets into a building without causing a draught and low temperature. The humidity should ideally be between 40% and 50% so as not to lose too many negative ions. If there is a problem, install a humidifier with automatic humidity control.
4. Install an electronic filtering unit in each room to filter out airborne particles, smoke, bacteria and viruses in the atmosphere to reduce respiratory and other infections.
5. Surround yourself with growing green plants. Thriving plants provide two important benefits. Firstly they show that they are living well in an ion enhanced atmosphere especially if they have a marked increase in size and growth rate. Secondly they tend to gather negative ions around themselves. This is particularly true of evergreens and ferns, which focus negative electrical charges on the pointed tip of their leaves.
6. The body absorbs light energy as a form of nourishment, but normal fluorescent lighting does not possess the combination of wavelengths or colour found in natural sunlight and should be changed out for Full Spectrum fluorescent lighting tubes such as True-Light® by SAD lightbox Co Ltd, Unit 2 Ashton Hill, Lewknor, Watlington, Oxon OX49 5SG.
7. Excessive noise in the work place can cause a lot of problems. Often noise can be reduced very easily if reduced at source.

Employers: When you next feel you and your staff are getting stressful and do not seem able to cope with the work at hand then consider that it may be the office's or the factory's environment which is wrong and that for an average week's wages or less you could put this right, by installing a strong neutraliser, making you and your staff feel so much better and drastically reduce absenteeism.

Employees: Next time you feel your job and colleagues are getting on your nerves and you feel like changing your job - which you otherwise like - ask your boss to read this book.

In the meantime try and sneak open that window now and again (if it can be opened!) and get some 'fresh air during your lunch break. If you work on a computer take breaks at regular intervals (remember the caputer can be switched off when not used!). Blink often and exercise your eyes.

If your employer refuses to install a strong neutraliser, wear a G-Oyster which will neutralise you.

*It can be
neutralized*

↑ Read A GAIN

A typical Geopathic Stress office. Dawn, Glen and Denise felt so much better when they moved their chairs away from Geopathic Stress.

Drawn by Rolf Gordon

SUPERMARKET in Kent Showing Geopathic Stress lines.

Personnel working the tills at the middle checkouts and Customer Services counter feel particularly stressed after a few hours. So do the personnel in at the Fish Counter. Products of fresh poultry and some fruit and vegetables (where GS lines are crossing) go off sooner than normal. Customers also report feeling stressed when shopping.

HORSE STABLES in Cheshire showing Geopathic Stress lines.

The health of the horses in the following stables:

- 1- *Misty* - Very nervous (4 years old)
- 2- *Alex* - Keeps going lame (3 years old)
- 3- *Rhythm* - Really bad virus for over one year (16 years old)
- 4- *Ammy* - OK
- 5- *Wembley* - A complete physical nervous wreck (7 years old)

DRAWING WITH A PENCIL

Sandy and Jenny's bed was at A. Both sleep much better now the bed has moved to B. Both sat on settee at C. Moved settee to D. Sandy sat at E in his office. Moved chair to F. Sandy had cancer in his liver!

Checked for Geopathic Stress lines
Rolf Gordon.

DOWSING WITH A PENDULUM

A PENDULUM can very easily be made, with a thread secured to a small weighted object, such as a key or a ring, but I find a well-balanced pendulum with a central point, gives the clearest results. Several designs can be purchase in various materials, such as brass, crystal, etc., but an expensive pendulum in, for instance, silver, will not necessarily give you better results. What is important is that you feel comfortable using your pendulum.

Hold the string or chain between your thumb and forefinger and allow the pendulum to swing. Experiment using different lengths of string or chain, starting with 3-4" (7-10cm).

The pendulum can also be used to test for Geopathic Stress. Different systems interpret the various swings differently. However, you know the system will work for you as long as it's meaning is clear and your interpretation is constant, so find out what works for you. Some Pendulists prefer to begin the process with the pendulum motionless, while others set the pendulum in motion by swinging it back and forth in front of them (the search position).

The method most generally used is:

1. Oscillating first away from you and then back towards you, this is the initial search position.

2. Rotation to the right, clockwise, is the positive swing saying 'yes'.

3. Rotating to the left, anti-clockwise, is the negative swing saying 'no'.

4. Oscillating back and forth horizontally *always* from right to left means 'no answer' or confused. Make sure you ask questions to which a straight 'yes' or 'no' answer can be given.

When dowsing with a pendulum for Geopathic Stress, the pendulum will move from the search position to the 'yes' position when you are over the line.

Once you have found the GS line, you can ask the pendulum which direction the line is in and the pendulum should swing in the direction of the line.

One way to practise, is to take your pendulum with you into a wood and practice on your own, without people and homes influencing your findings. If you are in a mixed wood, you will nearly always find a GS line going straight through a big oak tree.

DOWSING FROM DIALS

I have come across several methods of dowsing from dials but have refined one method in particular, which has proved quick, reliable and very adaptable. Distance is no object and contact is instantaneous, whether you are dowsing your own home or someone on the other side of the world. Believe me it works, but don't ask me how - check how useful it is yourself.

The method described here has been tried and tested on a daily basis over a long period of time by many people who use my method and are constantly surprised when checking one set of results with those of another dowser, or when someone checks the results on site, that all findings give the same results. I have lost count of the number of people who have been helped over the telephone, and who have confirmed my original distance dowsing findings. A good deal of sensitivity depends on the individual, their general disposition and surroundings.

Do make sure that you are not Geopathically Stressed before you start dowsing.

Unfortunately, to most questions there is not a straight 'yes' or 'no', so as you get used to dowsing, you will find you can dowse people and places, using a simple 180° dial, which will give you degrees of how 'good' or 'bad'. This dial is very adaptable, so you will find with practice, you can dowse how Geopathically Stressed people and places are, the toxicity in the body, Vitamin and Mineral deficiencies, people's vitality and if certain tablets are needed, how many and for how long. Also check to see if you are allergic to certain foods, drinks, chemicals (inc. certain makes of washing powder and toilet paper) etc. Ready-made meals have so many ingredients any one of which could upset you. Some things may upset you one day but not the next.

1. First become familiar with your pendulum. When you are confident of your results, you can adapt your own methods to suit you. To start with double check your results with the muscle test.
2. Keep it simple. Use a pendulum like a pen. Pick it up, use it and put it down again when you are finished. Don't forget to dowse with a happy and light heart.
3. Some people find it useful to use a 'witness' or sample, such as a lock of hair or a photo of the person to be dowsed; in order to have some kind of connection, but you may find that you only need the name or just have to think of a person or place.
4. The advantage of using an 180° dial is that only a few swings of the pendulum are needed for a clear answer. There is no need to wait for the pendulum to rotate one way or another, nor is there the confusion that sometime arises when using a 360° dial.
5. Dowsing is all about asking the right question.

Swing the pendulum back and forth over the dial a few times, asking yourself 'Is this person affected by Geopathic Stress?'. As soon as the pendulum settles down and swings on the same axis a few times, read the point on the scale. The 0 on the scale is the dividing point between being Geopathically Stressed or clear. The optimum level for being completely clear is +2, anything else could be improved on, but if the person is say, -4 then he/she is badly affected by Geopathic Stress. Many people interpret the scales in different ways.

Now try dowsing specific spots such as beds, particular chairs or desks or in front of a TV.

Then check the places on site, by pendulum, rods or muscle testing, or ask someone else to independently check on site. More often than not, someone in their family can dowse the places themselves. Again, -4 is a very Geopathically Stressed place, +2 is a good place. Don't forget you can make up your own scale.

If you constantly worry about getting it wrong you will not get clear readings, so be confident. But there is a difference between always blindly believing your readings and working confidently because you are regularly having your readings verified and are getting positive feedback from the person you may be checking. It is rather like learning to drive a car. When you first start driving you are hesitant about changing gear but eventually you don't even have to think about it as it becomes automatic.

When you are dowsing yourself or close family and friends it is often difficult to be completely objective, so ensure that an uninvolved person checks your results, otherwise you may get ~~the~~ answers that you wish for.

You can adopt my Dial, for example:

1. If you are checking the vitality of a building, you visualize your scale as 0-100 i.e. 8 = 80% etc. If your pendulum swings say somewhere between 6 and 7, in other words the vitality is between 60% and 70%, now visualise your scale as 0 to 10, so if you get 7, the total answer is 67%. (90% is very good. 50% and below is very bad)
2. If you are checking for a person's vibration in hertz due to Geopathic Stress, visualize the scale as 1 - 1000. If you dowse between 2 and 3 the vibration is between 200 and 300. Then use your scale for tens. Say you get 2-3 tens you have a figure between 20 and 30. Now use Dial 1-10, say you get 6, you now have a total of 226 hertz. (8Hz is best, 226Hz the worse).
3. If checking for vitamins, minerals, medical drugs, homeopathic remedies etc to take. First check if they are any good for you or the person taking them. +5 is very good, +1 not much good, -1 is no good, -4 is very bad. If checking for quantity to take, use scale 1-10. Also check when best to take them i.e. 2 in the morning, 2 at lunch, 2 in the evening or 6 at night, after a meal etc.
4. Often you can just visualize your Dial. For example: I always check eggs in shops before buying. Usually 1 to 2 eggs in one hundred are suspect. Often eggs have Salmonella on the outside of the shell, which you can transfer elsewhere say on cooked meat by touching the eggshells. If your pendulum swings to the right (+ side) say almost (+5), you are all right. Some go for checking food before eating especially meats, poultry, fish and ready-made meals. Fruit and vegetables you can usually see or smell if they have 'gone off'

DOWSING WITHOUT A PENDULUM

If you are on your own in a shop or pharmacy and would like to check if, say, a supplement is any good for you, try putting the tips of your thumb and first finger (or second finger) together. Put the first finger of your other hand through the 'O' you have created and pull. If the finger is not held back (don't pull too hard), you have got a negative answer. Some people find they blink if they get a negative answer.

Relax! Do NOT anticipate ANY answers!
DON'T PRETEND

DOWSING DIAL

MUSCLE TEST

This is a versatile and accurate diagnostic technique which can be carried out by any two people based on the theory 'that your body does not lie'.

The Muscle Test can be used to check if:

- a specific treatment, medical drug, supplement etc. is of benefit or bad for you.
- you are allergic to certain foods, drinks or toxic substances.
- you have microbes including micro parasites, bacteria, viruses or fungus.
- Also used to check if a specific bed or place is affected by Geopathic Stress or any other environmental pollution.

Ask a willing friend (test partner) to hold out one arm at shoulder height, parallel to the ground (sitting or standing erect). Place one of your hands (palm down) on their wrist, with your other hand on their shoulder (you can be behind or in front of the person). Now ask your test partner to 'resist' with all his/her strength while you push down on their wrist quickly and firmly to assess how much pressure it takes to push the arm down. The idea is to push just hard enough to test the spring and bounce in the arm, not so hard that the muscle becomes fatigued. It is not a question of who is stronger, but of whether the muscle can lock the shoulder joint against the push. In most cases a test partner will resist the pressure and the arm will remain outstretched.

You may like to test the other way round, so you can see what your arm feels like when you are being tested.

The Muscle Test is ideal for visually handicapped people.

The Muscle Test can also be carried out while you are both sitting down.

With experience, the Muscle Test can be done with your test partner's elbow on a table and your hand only on their wrist.

Remember weak arm = bad

When testing, it might help to concentrate by writing the name of what you are testing on a separate piece of paper. Ask the person you are testing to hold the paper (or actual tablet etc.) in their free hand. Alternatively, both of you should just concentrate on the question.

If the treatment, supplement etc. is good, the arm being tested will stay strong. If you wish to know how many capsules of say Vitamin D to take, test until the arm goes strong again.

Don't forget, that the answers may vary from day to day. One day tomatoes may test good for you, the next day bad. Don't get fanatical and test everything you eat.

If you get upset digestion system check what you have eaten before.

On testing a young child, your test partner should place their free hand on the child and let the child hold the name of tables etc. or just think of the child.

If you find the Muscle Test is obviously giving the wrong answers, you and/or your test partner may have a complication called switching. Try holding an obvious toxin (e.g. bleach), a 'strong' response to a toxin will indicate that you are switched. To unswitch, try a few short thumps with the palm of your hands, on your thymus which is on your chest, just below the collarbone. You may even have to ask somebody else to do the test.

One can use a top map to find water, clean places, etc. Also
can use a photograph. I can't get energy off of a fab
photo

DISTANCE DOWSING

Many people are quite rightly baffled when you tell them you can check them or their building by distance dowsing. I do not believe it will ever be explained how it works. Some think you connect into universal knowledge. But believe me, it works with an accuracy of over 95% for me, proven by me checking on over 20,000 people and buildings over the last 24 years. No doctor, health practitioner or individual has disproved with me up to now.

Normally one should not dowse more than two stressful buildings a week on site to prevent it harming you. But dowsing from a distance you can check hundreds of buildings and people a week without any harm to yourself and with an enormous saving in time. One should have three rules:

1. Do not try to-diagnose if people have specific illness such as cancer, AIDS, MS etc. Instead, check out the vitality of their organs and the presence of any specific microbes, including micro parasites. Check the lack of any minerals, vitamins, trace elements and in particular Q10, all of which doctors do not normally check for. Also the vital check for their acid alkaline balance (pH) and for any specific allergies. Finally check on any specific remedies to see if they are suitable.
2. Do not try and dowse into the future. You will not get rich betting by dowsing.
3. Remember it is not medically ethical to dowse people's health in detail without their permission.

The accuracy of distance dowsing has been proved to me in many ways during my dowsing of tens of thousands of people and buildings.

Whenever people have moved sleeping places on my advice they nearly always report back they sleep better than they have done for a long time. This is particularly gratifying in cancer cases. I found a woman with a cancer tumour on her brain was sleeping with two Geopathic Stress lines crossing her head. She always had headaches in bed. On the very first night she slept in a stress-free bed she slept well and without headaches.

John called on us looking very pale. I dowsed his bed from a distance and found two Geopathic Stress lines crossing his right hand chest. He confirmed he had a tumour on his right hand lung. I suggested he slept in a different room I had dowsed was free of stress. John came in the next day with a completely different healthy complex and said he had not slept so well for a long time after sleeping in the bedroom suggested.

On my advice a grandmother moved her grand daughter's cot across the room. Instead of the baby waking up sweating, crying and laying up against the edge of the cot at 3 a.m., she is now sleeping in the middle of the cot and waking up relaxed and smiling at 7 a.m. I spoke to Trisha about her friend's little boy Jack of 6 months who cried every night since he had been put into his present cot 4 months ago. I dowsed Jack's bedroom and his parents took my advice and moved the cot from back of the room to alongside the window. Trisha reports since the cot has been moved Jack has slept peacefully every night. I have similarly helped hundreds of parents to sleep serenely because their babies no longer cry at night by giving advice over the telephone where to move the cot into a safe place

CONFIRMING MY DISTANCE DOWSING IS CORRECT

It is very helpful if you can get confirmation your distance dowsing is correct. Here are some cases, which have helped give me confidence and confirm I am more or less right most of the time.

"Thank you for the Geopathic Stress dowsing from our house plan. I checked it with Kinesiology and it was spot on". Sally Pain.

"The remedy, which you recommended after checking me from a distance, has almost eradicated my Lyme disease, after antibiotics had failed over several years". Angela Williams.

"My long term, very bad digestion problems and tiredness have now been solved, after you checked me out and advised me what to do". Pam King.

"Thank you Rolf for locating where to drill for soft water. The water is from my own stream and has made the milk from my cows taste better. I have saved £6000 per year by not using Severn Trent's water and electricity on cooling the milk - and the dowsing was free". Perry Beard.

A South African doctor rang to ask me to check out a doctor friend in Australia (no name given). During the next five minutes, I confirmed his health problems that had taken his colleagues years to find out.

Gordon Ditchfield, who has 100 milking cows, contacted me because his cows' milk showed that some of the cows had Bovine Viral Diarrhoea (BVD) and this would have been very expensive for a vet to test all the cows for. Gordon gave me the numbers of all the cows and by distance dowsing, I found that No.272 was badly affected by BVD and No.141 less affected. The vet confirmed this. Both the cows were treated with AlliTech liquid for about a week, which killed the micro parasites successfully. As the cell count in the milk has become normal, Gordon now receives a bonus of several thousands of pounds per month. The chances of me guessing the two cows with BVD, would have been 1 in over 4,950

A few years ago, I was in Israel on a tour with Professor John Strange, a famous archaeologist, who was an expert in ancient ceramics. Broken pottery was plentiful on many sites. From sight, I could not tell if a pottery piece was 2000 or 5000 years old. I dowsed how old the pottery was, which agreed more or less with the professor's expert dating afterwards.

When I check with other people who can dowse from a distance, we nearly always reach the same results i.e. the amount of Geopathic Stress in a bed or the percentage of micro parasites in a person.

I have come across several doctors who can distance dowse and are very successful in diagnosing people's illnesses and, therefore, recommend the best treatment needed. They do not always admit that they can distance dowse to their colleagues!

Distance dowsing has enabled me to help thousands of cancer patients over the last 24 years.

At a workshop I gave, nearly all 15 participants could dowse from a distance within a short time. Thousands are now dowsing accurately from a distance using my simple method.

I use a pendulum for dowsing, but many people can dowse successfully with the muscle test.

Dowsing from a distance is fully explained in my book 'Are You Sleeping In A Safe Place'.

Anybody who doubts that I can dowse from a distance, only has to contact me and I will check you free and you can double check any health problems that I may find, with your doctor or health practitioner. Please only communicate by letter.

MAP DOWSING

This is a very useful and quick method of dowsing an area as it saves you dowsing on site. You can map dowse for anything reasonable such as Geopathic Stress (GS) lines under beds or buildings, water for wells, underground power cables, telephone lines, water supply pipes, drains, ancient building sites etc. Dowsing for missing persons or animals dead or alive does not seem to work for me.

As always I prefer to dowse with a heavy pointed metal pendulum which seems to work faster and more positively than a small crystal pendulum, rings etc. Say you are dowsing for GS lines crossing a bed (or building).

- (A) Move the pendulum back and forward along one side of a plan of a bed (or building).
- (B) When (or if) the pendulum starts to rotate (clockwise or anti-clockwise it does not matter) ask 'which direction are the GS lines going?'
- (C) The pendulum will go forward and backward in the direction of the GS lines.

Θ = Pendulum

- (D) Take a ruler and check the other end of the ray to get a fairly accurate direction. Draw in the line.
- (E) Now move the pendulum either side of the line drawn, moving it back and forward parallel with the drawn line. When you feel it is no longer naturally moving in the same parallel line to the original line drawn this is the edge of the GS lines in that place. Cover the GS area with lines.
- (F) Check the strength of the GS line using scale on a 180° dial divided into 0 to 16 sections. (Dial A) This is von Pohl's scale: 16 very strong GS. Below 9 not too bad and he reasoned would not produce cancer.
- (G) Check on a dial how many lines crossing the bed (building). Also check for GS on the scales beforehand to give some indication if there is GS. For example, if the bed registers -4 there is no doubt there is a strong line crossing the bed. If dowsing a room or building registering vitality 20% to 50% there is no doubt Geopathic Stress lines are present.

TYPES OF EARTH VIBRATIONS

It is important to realize that the aim of this book is to encourage you to search for Geopathic Stress in your own home environment, and if you dows for Geopathic Stress lines it is only those lines you will find, whatever their origin. So I have used that general term to include all the various different types of vibrations, which have been identified as detrimental to human health. For those of you who want to know more about the different types of lines I give details below. Some lines are neutral or beneficial and those you will find when dowsing for 'good places'.

WATER VEINS

Subterranean water flows in streams or veins anything from a few cm wide to 10 metres (33ft.) or more. It is mainly from the centre of the stream that GS is emitted. The GS lines vary in width from 20cm. (8 inches) to 1 metre (3.3ft.) - on average 40cm. (16 inches). From my own experience the flowing water, which creates the GS, is between 60m (200 feet) and 90m (300 feet) underground except on high laying land where it would be deeper down but surprisingly not always. It is thought that fast flowing water is more detrimental to health and where two streams cross, even at a substantial difference in depth, the disturbance is even greater. The flow of water rubbing against stones etc. creates an electromagnetic field in the opposite direction to the flow of water, which then disturbs the natural vibrations from inner earth going through the water making the vibrations high frequency. Surface water does not emit GS.

MINERAL, FAULT LINES, MOVING PLATEAUX AND CAVITIES

If Geopathic Stress vibration goes through them it can increase the Hz before they reach you.

GLOBAL GRIDS

It is my theory that the Hartmann and Curry Grids (or Nets) are 'earthing' grids for the cosmic rays that reach us from beyond the Milky Way and contribute to the stable environment we have evolved over millions of years. I think these Grids only become harmful when they get contaminated by GS lines crossing them. Some dowsers confirm that the grids have been rendered harmless after the GS lines crossing them have been neutralised or removed.

HARTMANN NET or GLOBAL GRID

Thought to have a certain relation to the magnetic north pole, this electromagnetic grid was identified by Dr. Ernst Hartmann. The grid lines run North-South and East-West, a bit like lines of latitude and longitude around the earth. The grid lines are 2-3m. apart (6-10ft.) and 20cm. wide but the width increases up to 80cm. (2.6ft.) during the full moon period, at times of sunspot activity, changing weather fronts, during winter months and possibly due to environmental pollution.

12 ft in this area

CURRY GRID

60 ft.

Discovered by Dr. Whitmann and Dr. Manfred Curry as a result of Dr. Curry's research at his Medical and Bio-Climatic Institute in South Germany. This grid runs diagonally to the Hartmann Net. The lines have a regular pattern of approximately 3.5 x 3.5m. (11.5ft.). Like the Hartmann Net the Curry lines are charged + or - and where two similar charges intersect the disturbance is particularly strong.

HARTMANN NET

CURRY GRID

SCHUMANN WAVES

Schumann Waves are very important to human well-being. Identified in 1952 by Professor W.O. Schumann of Germany. These waves have a frequency of about 3-50 Hertz (cycles per second) with the most beneficial of 8 Hz which coincide with the human average brain's waves of 8 Hertz when not Geopathic Stressed. It is claimed that Schumann Waves represent the biological tuning mechanism of the earth, without which living organisms cannot survive. From animal experiments we know that animals shielded from the Schumann resonance become distressed and eventually die. Steel and concrete buildings reduce the Schumann Wave resonance and the results of deprivation of this kind can be observed in the phenomenon of Jet Lag. The waves are greatly reduced in highflying aircraft. Space scientists soon learned to install Schumann Wave simulators in manned spacecraft, after early astronauts returned home with distress symptoms through being deprived of these waves.

LEY LINES

I have often been asked if GS lines are the same as ley lines. Jokingly, I often reply: 'Ley lines are not normally known outside England'. Alfred Watkins first presented his ideas on ley lines in his now famous book 'The Old Straight Track' published in 1925. He states they are 'alignments in the landscape, linking together churches, standing stones, moors, track ways and other ancient sites which were part of a system of communicating roads or paths connecting settlements one to another'. Not all agree with Watkins and feel ley lines are subtle energy that permeates and interconnects the landscape. I believe ley lines are the vibrational imprints people and animals leave behind. There is a very strong ley line along 'Pilgrims Way' from Winchester to Canterbury. People could follow these lines by feeling or dowsing them.

YOUR BODY AND HOW TO CHECK IT

A very effective way to check the health of your body, and to detect any area which needs specific treatment is to use the Muscle Test.

If you can use a pendulum, this is a quicker method.

I consider the average healthy adult's organs, glands etc. to be 80% efficient (healthy children 80-95%). Check each of the sections on the opposite page by asking, "is there a part in this category below 50%?". If you get a yes, by the arm going weak, check the individual parts in the section to find the weak one/s. You can then ask "is it below 50%, 40%, 30% etc. After any treatment check again to detect any improvement. Start checking at 80%, then 70%, 60% etc. Some people prefer to use a finger of the free hand to point to individual parts of the body. For checking pulse and blood pressure make up your own scale.

The advantage of using an 180° dial for dowsing with a pendulum is that you get the answer in percentages rather than just a 'yes' or 'no'. How do you know how bad, for example, a kidney is unless you know it in percentages?

Make a larger copy of the dial below if you wish. Swing the pendulum back and forth over the dial a few times while asking for, say, "what is the worst state of a part of this section?". The answer can be read on the scale when the pendulum swings back and forth steady in the same direction. If the reading is below 50%, check individual parts in the section. An L-rod can also be used on a larger dial.

A quick way to confirm your ability to check the health of your body parts is to check the vitality of your thymus (found 1½ hand-width down from the base of your neck). Say you find it is 50%, then give your thymus a few slaps with your hand. This will revitalize the thymus. Check again and you will see an improvement of 10-20% in the vitality of your thymus. So you now start trusting your decisions!

Using a 180° dial for fast dowsing.

INSIDE YOUR BODY

ADDITIONAL INFORMATION

EXPERIENCED DOWSERS

If you need the services of an experienced dowser, you can contact:

BRITISH SOCIETY OF DOWSERS, 4/5 Cygnet Centre, Worcester Road, Hanley Swan, Worcs, WR8 0EA. Telephone: +44 (0)1684 576969, Email: info@britishdowsers.org

The Society has a national membership, holds regular London lectures on all aspects of dowsing, and has a Register of Dowsers, some of which undertake to dowse for Geopathic Stress. Dowsers may charge anything from a cup of tea to £50 or more for a survey.

Penny Brohn THE BRISTOL CANCER HELP CENTRE

Penny Brohn Cancer Care, Chapel Pill Lane, Pill, Bristol, BS20 0HH

Telephone: 01275 370 100, Email: info@pennybrohn.org

Web: www.pennybrohncancercare.org

The Centre provides a complementary approach to cancer aimed towards the whole person, stressing self-healing and self-help alongside nutritional guidance, stress management, counselling etc. The Centre runs programmes of seminars and workshops with facilities for residential patients and day visitors.

IMPORTANT

There is no such thing as a "professional dowser" so you or your friend may be as good as any dowser, nor should you be intimidated by dowsers, who say your home is the worse place they have checked.

80% can
20% can not dowse. They are not grounded (in tune with the earth) one can be grounded. You should be grounded for better health. It takes from 10-30 min and the person grounding you test you before & after. Fraudsters are out there. If available,
Slopd Graham 519 588 8406

SUMMARY

1. The evidence is overwhelming: ONE IS UNLIKELY TO DEVELOP A SERIOUS LONG TERM ILLNESS UNLESS ONE HAS SLEPT OR STAYED FOR SOME TIME IN GEOPATHIC STRESSED PLACES and you must do your utmost to prevent yourself, your family and friends from suffering the ill effects of Geopathic Stress - and it is so easy to take positive action.
2. Insist that your medical practitioner checks you for Geopathic Stress if you have a serious or undiagnosed illness, are generally feeling unwell, or have some of the symptoms indicated in this book. If your practitioner does not know about Geopathic Stress let me know and I will send full details (or lend him/her this book).
3. IF.... you have Geopathic Stress check to see if your bed, chair, workplace is affected by using dowsing rods, pendulum or the Muscle Test described earlier. Believe in yourself. People are continuously asking for dowzers, but in most cases dowzers are only confirming your own findings.. It really is true that most people can dowse, but if you really feel you can't perhaps you can persuade a friend to try for you.
IF..... you find that your bed is in a Geopathic Stress place try to move it into a safe place. If that is not possible place thick polythene sheets between the bed base and mattress or under the bed (overlapping bin liners for instance). This is a short-term protective method and will only block the weaker GS for a short time depending on the strength of the GS, after which time the sheets should be thrown away and replaced with fresh ones. At work, try sitting on a fresh newspaper each day. These precautions are only partly successful if there are strong Geopathic Stress lines.
IF..... you cannot get your home dowsed or if the whole of your home or workplace feels depressing, install a strong stable neutraliser which, will free the building from the effects of Geopathic Stress. This will improve the general vitality of the environment and the well-being of the occupants. A good neutraliser will especially stabilise the vitality in buildings during the night when GS is strongest. If you can, check the efficiency of the neutraliser by dowsing or Muscle Testing before and after installation.
4. Do your utmost to ensure that your children sleep in a good place - children are very sensitive to Geopathic Stress and will let you know very quickly, the place they sleep best in. Children need a good start in life. If affected as a child it will react very quickly to GS later in life.
5. It is vital a woman sleeps in a Geopathic Stress-free place during pregnancy to prevent a difficult pregnancy, miscarriage, stillbirth, premature birth, post-natal depression, birth of an unhealthy newborn during which may cause autism or may lead to cancer during childhood.
6. It is very important you are not affected by the other BIG FOUR. Get rid of any micro-parasites, have enough Q10 and ensure your acid alkaline balance is correct. Also ensure you get enough sunshine otherwise take vitamin D supplement.
7. I estimate people not only live longer if they are not Geopathic Stress but they also live most of their lives in good health. It is not pleasant getting old if you have been unhealthy the last say 20 years of your life due to Geopathic Stress
8. REMEMBER NEVER sleep in a place where the previous occupant has had cancer if the person has slept there for some time.
You inherit the sleeping place not the illness.
9. Getting rid of Geopathic Stress will not GUARANTEE you will not get cancer or get it again, as many factors can cause cancer, but the chance of getting cancer will be much reduced.

10. If you find the contents of this book too much to comprehend, or don't wish to become involved in dowsing, JUST MOVE YOUR BED - FOR BETTER OR WORSE if you suffer any of the symptoms I have listed.

11. I make a conservative estimate that we in the U.K. spend in excess of £4 billion on the 200,000 new cases of cancer each year. This amounts to over £50 billion in the western world alone. As Geopathic Stress has now been estimated to be the only common factor in 95% of cancer cases and most other serious illnesses and psychological conditions, you must keep the contents of this book in mind forever.

READ

DULWICH HEALTH LTD

was formed 30 years ago to gather information from all over the world on Geopathic Stress and to pass this knowledge on through Practitioners, News-sheets and lectures. Latterly Dulwich Health has investigated the amazing healing properties of Magnetic Therapy. Dulwich Health is a social enterprise, which exists to help people rather than maximise profits

NEUTRALISERS

Early on Dulwich Health was contacted by many people, who could not move their bed, chair etc. into neutral places or found the whole house or workplace was badly Geopathic Stressed. In view of this they started to investigate neutralisers and found quite a few devices from various countries, but most were not strong enough or they lost their potency over a short time. Others had to be installed by experts and regularly checked for effectiveness. It was obvious a straightforward method of neutralising Geopathic Stress was needed, which could be installed by anybody with minimum of fuss. After an enormous amount of field tests and research Dulwich Health developed the *RadiTech* to overcome the problems, which hindered the success of many neutralisers. It brings your and your home's vibrations down to the beneficially 8 Hz very quickly. Many thousands of *RadiTechs* have now been sold many all over the world by medical practitioners and through personal recommendations.

Geopathic Stress has become many times stronger over the last few years. This is thought to be mainly due to the thinning of the ozone layers created by increased bad environment, thereby causing the sun's rays to affect the earth more strongly. Over this period the *RadiTech* has continuously been made more powerful. A *RadiTech* can be purchased on a month's trial basis.

Hi Rolf, thank goodness we were put in contact with you! Our home is now a peaceful place. We were all stressed-out for years and it was becoming unbearable.

Installing the *RadiTech* has meant my kids don't argue as much, we sleep better and feel healthy and relaxed.

Thank you so much

Georgia C. Devon

My new *RadiTech* was installed Thursday without telling anybody in the family. Next morning my mother-in-law, who stays with us, said she has had such a good night's sleep as she had last night.

Frank J. London

Dear Rolf,

Great news. After installing my *RadiTech* the microscopy at Ulverston Natural Health Centre has shown for the first time in years that my red blood cells are not clumping together. My hair is growing thicker as well. Best wishes from Penny P. Cumbria

Norman B. Rye has an apple tree which had not produced any apples for many years. He strapped a small *RadiTech* to the bottom of the trunk of the tree in the autumn. From then on the apple tree has been full of gorgeous apples each year. Fruit trees just don't like Geopathic Stress.

MAGNETIC THERAPY

- has been known of and used for hundreds of years and much research has been carried out to show the benefit it has in healing bone fractures and skin injuries, treating pains and other malfunctions and detoxifying the body.

Unfortunately applying the necessary strength of magnetic field had been very cumbersome and expensive, so Dulwich Health developed the *MagneTech* as a compact, lightweight apparatus easy to use by anybody,

A. Handle

B. Magnetic Field

C. On/Off Switch

D. Cable

E. Jack plugs for connection to:

F. Transformer plug 240 (220) to 9 volt

G. Battery 9 volt

3 cattle magnets placed at ground wire of transformer eliminates Hydro Loop. But transformer need a neutraliser for a douser for plasmot.

Fridge magnets - sprains, breaks, minor pain, relax eyes after a lot of reading

Cattle magnets: only use if you can tell which way to use. Place on body with energy

Do NOT wear magnetic necklaces. can harm babies, pacemaker
YOU.

which could apply a powerful magnetic therapy direct to any part of your body or indirect through your feet (meridians) reflexology point and nerve centres on the vertebrae.

MagneTechs very good if grounded
The *MagneTech* incorporates the strongest permanent magnets commercially available, increasing the power of the magnets up to TWENTY TIMES by spinning them. By changing the poles over 260 times a second the north and south poles can not be recognised by the body, so the *MagneTech* can be used anywhere on the body for any health problem, external or internal from head to foot. Spinning the *MagneTech* at the human healing speed gives off vibrations of 136.1 Hz (cycles per second) which is the same monks create when they chant 'ohm' when healing. This increases the magnetic therapy a further THREE TIMES.

Magnetic therapy increases the absorption of oxygen, speeds the flow of blood to operational scars, wounds, injuries etc. and increases the formation of antibodies in the T-lymphocytes.

Your immune system can be strengthened by placing the *MagneTech* directly on your solar plexus (above your navel) where about 70% of your immune system is stored and on your thymus where your T-cells are matured.

Lately it has been shown magnetic therapy revitalises the universal biological motor, which provides each cell with chemical energy, ensuring the motor runs the correct way, otherwise tissue perish.

* These are some of the successful treatments reported mainly from Practitioners: skin wounds, scars, burns and infections, leg ulcers, sinuses, kidneys, bad circulation, frozen shoulder, high blood pressure, blocked arteries, sports injuries, pain of all types, arthritic joints, stomach pain, lung congestion, varicose veins, blocked lymph glands, severe hiccup, chilblains, sores caused by 'superbugs', inflammation - ear, bone, teeth, skin etc. Dental problems - toothache, bleeding gums, inflammation, ulcers and abscesses in the mouth. Headaches and migraines, eye problems, bronchial, enlarged prostate, tinnitus, blocked urethra, PMT, burns, ME, insomnia, cystitis, boils, eczema, stiffness, swelling, and healing operational scars and broken bones (40 % faster).

The *MagneTech* can also be used successfully to relieve the body of toxins including metals such as mercury (Amalgam fillings), aluminium and lead. Other uses: animals (all ailments), plants (increase growth), food (to detoxify) and liquids (to magnetise and detoxify). Please note the *MagneTech* creates a pure magnetic field from permanent magnets not an electromagnetic field, induced by electricity, which in many cases can be harmful.

The *MagneTech* has now been used in over 500,000 cases over the last 20 years without any reported side-effects and is still the most powerful apparatus on the market.

Any family of four or more would need a *MagneTech* several times a month and many people with chronic pain use it daily. The *MagneTech* is the most important First Aid to take on all holidays.

Individuals and practitioners can use the *MagneTech* immediately.

The *MagneTech* is the only magnetic therapy apparatus, which has passed the BS EN6010-1:2006 Medical Electrical Equipment, Part 1 and EN 606601-1-2:2007 certificate, so it can be used by hospitals and Medical Centres.

The *RadiTech* and the *MagneTech* are manufactured by Dulwich Health in England. They can be had on trial and are fully guaranteed.

We always encourage anyone feeling ill to contact his or her doctor first.

Investigating the affect of Geopathic Stress on animals and plants about 80 years ago

Herr Dannert of Hagen Westphalia in Germany and Dr Jenny of Aarau in Switzerland, agreed in 1932 to collaborate to prove the very detrimental affect of Geopathic Stress (GS) on animals and plants.

Four feet wide Geopathic Stress lines were found. Several cages were built and placed so that one half of the cage was directly over the GS affected area and the other half over the GS free zone. Mice were then placed in the cages and the food always placed at the end over the GS affected area. Soon it was observed that the mice would never cross the centre of the cage from the free area to the affected area, except to rush across to get their food, they avoided being in the affected area altogether. When the cages were reversed on their own axes by 180 degrees, the mice fled, taking their young to the GS free area.

*Some
with
women*

Tests were carried out with mice placed in two cages, one over the GS affected area and the other outside the GS affected area. The females in the cage over the GS affected area did not bear young, but those over the GS free area did. Moreover, it was found after one year, that 13% of the mice in the GS affected area, were suffering from spontaneous carcinoma. Those in the GS free area were free of all disease

Further tests were carried out by painting all mice in both cages with cancer "tar" behind the ears; 100 per cent of the mice in the GS affected area developed cancer, while only 17 per cent of the mice in the GS free area were affected. All of the mice with cancer died quickly.

German scientists gradually took notice of these experiments in Switzerland and Herr Dannert was invited to carry out further experiments at the Kaiser Wilhelm Institute at Dortmund. At the end of the first year, the test showed similar results to those of the Swiss tests. During the second year, further ancillary experiments were made on the blood and bodily weight of the animals. The mice over the GS affected area showed a rapid decrease in weight and haemoglobin content of the blood, whereas all the mice in the GS free area were completely healthy and showed no decrease in weight or haemoglobin content.

Experiments with tadpoles were also carried out. 150 tadpoles were placed in a container with sand, swamp plants and water. This container was placed in a GS affected area. The following day all the tadpoles were ill and had all died within four days. Another 150 tadpoles were placed in a similar container in a GS free area and all remained healthy.

Experiments with plants showed that those planted in GS affected areas yielded 50% less growth within two days, compared to those planted in GS free areas. In due course the plants in the GS free area bore flowers and fruit, whereas the plants in the GS affected area died very quickly

*same with anything. Trees, mammals, buildings
If transplanting a larger tree (6 ft T) mark it on the
north side & replant &. If it comes from a nursery
check its aura. Or have someone who can check.*

"A most excellent manual" E C. London. "The evidence you produce is certainly impressive" H, B. Suffolk. "Congratulations for making this available to the public ... puts it together simply and lucidly" D. V. Gateshead. "The best book on this subject I have come across" Herbert Douglas, Dowser, USA. Must have a copy for myself and my patients "DR. C. F. London. "At first it seemed too fantastic to believe, but now it all makes sense" R. D. London. "My first initial mood in reading the book was to feel rather sceptical, that perhaps here was another person trying to flog another New Age concept. However, I very quickly realised, that I was reading a text that was intelligent, clear minded, open-handed and hearted in its desire to offer this knowledge to others rather than limit it to self for ego or gain". C. H. Somerset. "I could put your suggestions into practice straight away, with good results" N. Z. London. "Very dear" Count Limbug Stirum, well known Argentine dowser. "Your book arrived on our silver wedding anniversary-best present" Ole Hovmand, Founder of Danish Anti-Geopathic Stress Society. "I agree 100% with its contents" Pablo Frolich, President of the Swiss Foundation for Protection against Geopathic Stress.

ARE YOU SLEEPING IN A SAFE PLACE?

ROLF GORDON'S son was one of over 150,000 people in the U.K. to die of cancer in 1985. This led him to thoroughly investigate the claim that Geopathic Stress is a major factor contributing to cancer. 'Are You Sleeping in a Safe Place?' is the first U.K. publication to present the evidence and substantiate the claim first made over 60 years ago:

"One is unlikely to develop cancer unless one has slept or stayed for long periods in Geopathic Stress places."

Research involving tens of thousands of cases has confirmed this statement. One well known doctor attempted to find a cancer patient, who was NOT sleeping in strong Geopathic Stress places. In 3 years he didn't find a single case not affected by Geopathic Stress.

Extensive studies have shown the far-reaching effects of Geopathic Stress on children, resulting in learning disabilities, sleepless nights, bedwetting, sleepwalking and even Cot Deaths. Geopathic Stress has been positively linked with Cancer and most chronic and serious illnesses including Multiple Sclerosis, Tuberculosis, Meningitis, AIDS, Rheumatism, ME, Asthma, Heart and Circulatory problems as well as depression and other nervous conditions.

Geopathic Stress is nearly always a contributing factor when women can not conceive, have a miscarriage or give birth to a baby born with a defect

Geopathic Stress does not cause any illness, but weakens your immune system, so you have low resistance to virus, bacterium and parasites and environmental pollution. Many doctors and Natural Health Practitioners confirm Geopathic Stress is the common factor in most serious and chronic illnesses and psychological conditions.

This book fully explains how to detect the symptoms associated with exposure to Geopathic Stress and describes how to locate the stress with a simple home-made device made in minutes and costing nothing AND shows you how to find the best possible places to sleep. It has been shown in thousands of cases that elderly people, who have enjoyed good health all their lives, have nearly always slept in places free from Geopathic Stress.

Over 3,000 doctors in Europe make sure the homes of their most serious ill patients are tested for Geopathic Stress. Opinions of some Medical Doctors:

According to Dr. E Harman MD, in his 30 years of practice, he has not come across a seriously ill person -with the exception of disease caused by bacteria or virus infections or injuries - who has not slept or stayed for long periods in Geopathic Stress places. **He believes that cancer is a disease of location.**

Professor J.Graz M.D. recommends a change of bed position to those patients who do not respond to his medical therapy.

Dr. J Issels M.D. believes that it is the duty of doctors to inform their patients of the dangers, if they sleep in Geopathic Stress for any length of time.

One doctor even claims, that all his patients, except in cases of injuries, are Geopathic Stress, otherwise they would not be patients. The most common indications of exposure to Geopathic Stress during sleeping periods are:

Resistance to medical treatment, a feeling of being run down and exhausted, depression, nervousness, loss of appetite, pallor and not wanting to go to bed, - and when in bed, Insomnia, restless sleep, feeling cold, cramps, tingling in arms and legs, grinding of teeth, nightmares and fatigue in the morning. Geopathic Stress could affect you and your family or friends, so you owe it to yourself to read this book.

The book also fully explains the Muscle Test and the very effective yet simple method of dowsing from dials. The book tells you how you can quickly check the state of every part of your body. A large pull-out showing where all your organs, glands and other parts of your body are.

Rolf Gordon has now for the 7th time over 20 years brought his book up to date incorporating much new information.

We will send you regular Newsheets on request to keep you informed on the latest research.

The aims of Dulwich Health are:

- to promote research into Geopathic Stress, • to make the facts common knowledge. • to help and advise you.
