

TRIMS

Tailoring Request Information Management System

TRIMS is an automated data collection and management system designed to track the status of alterations requests. TRIMS is customized to track individual alterations requests through a user-friendly interface, with an estimated, five-minute learning curve.

PROCESS PRIOR TO TRIMS

Prior to TRIMS, all tailoring requests were manually captured on paper in different locations with no immediate feedback across departments.

PROCESS WITH TRIMS

TRIMS replaces the physical paper data collection process with a tablet interface designed to electronically record and track the flight, roster number, and work required. The interface updates in real-time, allowing management to observe and track the progress of each flight's completion status.

Easy to Use. 5 Minutes to Learn!

YEARLY INCOMING FLIGHTS **884***

YEARLY TRAINEES **35,000***

**Estimated numbers are based on averages taken as of June 2021*

ADVANTAGES OF TRIMS

Real-time automation of an already familiar, but manual process

Very low learning curve

Eliminates pencil/paper requirements

Quicker Processing Time

Increased data reporting and security
