

# How to Connect an Accutach Co. Steering Wheel Button Box to a Freddy Brown Racing 4STB-E AUTO RESET Unit Rev 1.0 Accutach Co, 2016

This document shows you how to connect an Accutach Co. Steering Wheel Button Box to a Freddy Brown Racing 4STB-E AUTO RESET Unit. For this example, it uses a 99-04 Steering Wheel Button Box, connected so that the On button will control Overdrive (O/D) and the Off button will control Lock-up (L/U). It will show an optional way to use the RESUME button to quickly take the transmission out of O/D and L/U. It will also show how to use the Coast button to control the transbrake. You can substitute other Accutach Co. Steering wheel boxes and you can change the buttons that control each function simply by keeping track of which pair of colored wires corresponds to which steering wheel button you want to control each function

Special thanks are due to Ken Conway for actually developing and proving this scheme.
