Keneally Farms of Cadott, Wisconsin

## CUSTOMER REVIEW

In 2015, we were looking into lighting options while building a 200-cow freestall barn and milking parlor. After looking around, we concluded that not all LED lights are created equal. We saw an LEDWisconsin ad in a farm magazine and were very interested in their **high bay** and **vapor tight lights**. We needed to see them to determine if they were the bright, crisp, white LED light for which we were looking.

Kurt is very easy to work with and went out of his way to make sure we could see them before deciding. He is so knowledgeable about his lights and the different types of lights on the market. He also knew how many lights we would need and where they should be placed to make the whole building very bright, which made it easy when ordering. Kurt is excellent at listening to needs and creating a very affordable and competitive lighting package. **LEDWisconsin's prices are a lot better value for a much better-quality light than the other LED options.**

Since there weren't any local barns with WisconsinLED product, Kurt sent us some lights to try. Our electrician hooked them up in a similar freestall barn to see how they worked and compare them to the existing ones. We were all amazed, including the barn owner, about how much brighter, whiter, and crisper the lights were from LEDWisconsin. Once we saw that, we knew those were the right lights for our building project.

After five years, we are still impressed. One light quit and LEDWisconsin promptly sent someone out with a new light. They replaced it free of charge as they had promised.

We highly recommend LEDWisconsin lights to anyone looking for high quality, affordable LEDs with a great warranty and wonderful service. We are very pleased with our lights and many inquire where we got them since our barn and parlor are so bright. We are extremely happy with them and will definitely be looking to LEDWisconsin for any of our future lighting needs.

## CUSTOMER REVIEW

I HIGHLY RECOMMEND LEDWISCONSIN FOR YOUR NEXT LIGHTING PROJECT.

After conducting an energy audit in 2013, we determined that lighting was the largest use of energy on our family farm. At the time, we had 250W and 400W metal halide fixtures installed in our barn and milking parlor. As we looked for replacements to make us more energy efficient, I met Kurt and he showed us the LED technology available for us. Kurt helped us work with NRCS to design a plan and apply for a lighting upgrade grant that allowed us to replace all the fixtures in our barn. The value of our new fixtures has been great, and our electric bill was immediately lower. We also added some vapor tight fixtures to our milking parlor and old calf barn. **Both investments have improved the working environment in these facilities. The quality of the light-**

**ing has improved in all the barns.** Kurt and his team installed all the new lights with very little disruption to our day-to-day operations. We have had very few issues with the lights, but when we have Kurt is able to get them resolved quickly with tremendous service. One of the goals of our farm is to reduce our carbon footprint and become more sustainable and working with LEDWisconsin allowed us to make huge strides in reaching that goal. I would highly recommend LEDWisconsin for your next lighting project.

## CUSTOMER REVIEW

LEDWisconsin was instrumental in helping us begin the process of updating our aging lighting systems throughout our fairgrounds. From updating individual bulbs to helping us determine which new fixtures would best suit our needs in a multitude of different applications, **Kurt and his team were amazing to work with and made the process as simple as possible. We have begun to see savings on our electrical bills already!**

Climate for Growth

# BlueFan

High performance. Energy efficient.  
Intelligent design. Long durability.

Looking at performance, pressure stability and power consumption, BlueFan is the best fan on the market. BlueFan is designed specifically for the harsh livestock housing environment. It does not corrode and shuts tightly when not in use. BlueFan saves energy and money and ensures the animals in the livestock house optimum climate and well-being.

# BlueFan BF 50

Perfect fan for renovations and new build

## RETROFIT

It is EASY to replace existing box fans with the new BF 50. Installation is SO QUICK, that it can be done between batches:

- Arrives assembled – a robust fan that is easy to install
- Fits in the existing holes in the house – no need for new building structure
- Reuse the existing cables in the house – easy additional wiring for motor-controlled shutter and LPC variable

- Noncorrosive
- Maintenance-free
- Energy-efficient fan
- Come as an option
- Airtight shutter  
Less backdraft from the outside
- More insulated fan and shutter  
Reduced condensation on the inside
- Possibility of emergency opening
- Stable shutter position  
Also in windy conditions
- Energy-efficient motor
- Possibility of using Dynamic Multistep  
In combination with SKOV controller
- Seamless outlet from 0% to 100%  
In combination with SKOV controller
