

Fact Booklet

Insects

FACTS BOOKlet - Insects

This fact booklet on insects is a great resource to use for doing a research project on insects with your kindergarten class. It is difficult to find age appropriate non-fiction books that the child can be independent in their research skills.

Included in this product is a black and white informational book about insects that can be used for independent reading as well as for guided reading groups. All you have to do is print them back to back. The pages are numbered to make the printing easier.

Other booklets may be found in our store about other insects such as ladybug, grasshopper, ant, firefly, and bee.

I hope you enjoy this product!

My Report on

Insects

**choose an insect Draw and label it.
Then write sentences about it.**

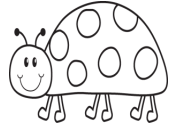

Insects

Draw and write a fact about insects.

Draw and write a fact about insects.

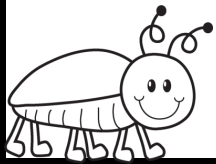

Insects

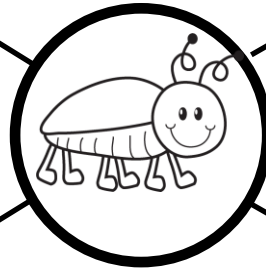

**Draw and write about
what insects eat.**

**Draw and write about where
insects live.**

Insects

About...

Insects

Insects

1	90% of all life forms are insects. Insects are arthropods. There are between six and ten million types of insects.
2	Most insects go through four life stages: the larvae, the pupa, the pup and the adult.
3	Insects are amazingly adaptable and exist in all types of environments, oceans being the least common area for insects.
4	The exoskeleton has the sense organs for light, temperature, sound, smell, pressure and wind. Many insects have compound eyes and can fly.
5	Insects can be useful. They can pollinate crops and can produce wax, honey, and silk.
6	Insects can be harmful. They can destroy crops, carry diseases and are pests to animals and people.
7	A bug is a certain type of insect.
