

GROUNDING TURF — SOLUTIONS —

Synthetic Field Grooming & Maintenance

What's Included

THOROUGH FIELD GROOMING

Grooming of your synthetic turf field using the industry-leading Redexim Vertitop 1800

INSEAM AND LOGO EVALUATION

Unsecured in seams and logos can pose as a tripping hazard for athletes. We will check turf seams and inlaid logos for loose areas where the turf may be pulling up.

INFILL MEASUREMENTS

Proper infill levels are crucial for player safety. Our experts will record measurements at the center of the field and high-traffic areas, noting any areas for concern.

COMPREHENSIVE REPORT

Your team will be sent a full report that includes images of items removed from your field, infill measurements, and noted areas of concern.

NAILER-BOARD INSPECTION

The nailer board around your field is key in eliminating buckling, rippling, and more. We will inspect all perimeter nailer board to check for proper attachment.

How It's Groomed

The Redexim Vertitop 1800 is a comprehensive cleaning system designed specifically for synthetic turf fields. Our experts recommend cleaning your turf one to two times per year to maintain its condition and safety.

After each cleaning, your team will receive a detailed report, complete with images of items removed from the field, infill measurements, and any areas of concern that were identified.

1
The tines on the front of the machine have adjustable depth, and serve to de-compact the top inch of the playing surface.

2
The powered brush collects small debris and trash while the sieve behind it allows any rubber infill to return to the playing surface while a powerful vacuum system collects particles such as dust and hair.

3
On the back end, an adjustable broom is lowered to groom the fibers and leave each pass with an attractive and clean stand of turf.

What We Find

Debris collected can range from loose turf fibers, coins, firework debris, bobby pins, safety pins, small rocks as well as track spikes and football helmet snaps that won't get collected by using a magnet.
