

Synthetic Field Grooming and Maintenance

Keep your field in game-day condition.

What's Included

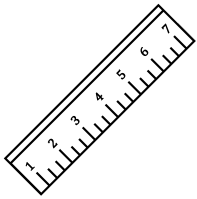

1

Thorough Field Grooming

Grooming of your synthetic turf field using the industry-leading Redexim Vertitop 1800

2

Infill Measurements

Proper infill levels are crucial for player safety. Our experts will record measurements at the center of the field and high-traffic areas, noting any areas for concern.

3

Nailer-board Inspection

The nailer board around your field is key in eliminating buckling, rippling, and more. We will inspect all perimeter nailer board to check for proper attachment.

4

Inseam and Logo Evaluation

Unsecured inseams and logos can pose as a tripping hazard for athletes. We will check turf seams and inlaid logos for loose areas where the turf may be pulling up.

5

Comprehensive Report

Your team will be sent a full report that includes images of items removed from your field, infill measurements, and noted areas of concern.

How It's Groomed

Our team uses the industry-leading
Redexim Vertitop 1800 on all synthetic turf fields.

The Redexim Vertitop 1800 is a complete cleaning system for synthetic turf fields.

Cleaning your turf 1-2 times annually is recommended by experts.

1

The tines on the front of the machine have adjustable depth, and serve to de-compact the top inch of the playing surface.

2

The powered brush collects small debris and trash while the sieve behind it allows any rubber infill to return to the playing surface while a powerful vacuum system collects particles such as dust and hair.

3

On the back end, an adjustable broom is lowered to groom the fibers and leave each pass with an attractive and clean stand of turf.

What We Find

Your team will be sent a full report that includes images of items removed from your field, infill measurements, and noted areas of concern.

ITEMS EXTRACTED

Debris collected can range from loose turf fibers, coins, firework debris, bobby pins, safety pins, small rocks as well as track spikes and football helmet snaps that won't get collected by using a magnet.

"In 2024, we implemented annual synthetic field grooming through Nemaha, in addition to our normal grooming practices. I immediately noticed an improved aesthetic appearance on our turf and was impressed with the amount of trash and loose fibers the machine collected. We plan to continue the annual grooming program and are convinced it helps extend the life of our field turf considerably. Fans and coaches alike had positive feedback after the last grooming."
