VIA: Email, certified mail

To the Prime Minister of Canada, Justin Trudeau,

This information was just sent out to over 200 health care officials/physicians/COVID response leaders this past weekend.

A fatal mistake in the COVID vaccine hypothesis that was previously overlooked. The attachment includes all details but the mistake is incredibly colossal and extremely simple to explain.

The COVID vaccine requires a neutralizing antibody that binds the COVID virus in the lung before the virus can infect a lung cell. The mistake. There is NO viable path for the antibody through the "blood lung barrier" into the lung alveolus which is where the antibody MUST be in order to neutralize the virus.

The "Blood lung barrier" is not a phrase I coined. There are at least 90 million hits on google for this phrase. This lung barrier can prevent the net influx of water into our lungs. Water molecules are ONLY 18 Daltons in size. Very unfortunately, the COVID neutralizing antibody is 145,000 Daltons in weight/size. Gargantuan. The biggest mistake in the history of medicine. NO VIABLE PATH INTO THE LUNG FOR THE ANTIBODY.

Mothers of vaccinated children everywhere will say, "you mean you didn't even know how the antibody gets into the lung and you insisted on vaccinating our children????"

I don't know what the truckers will say, but the language will probably be much more colorful and .. .. worthy of a felony in your country? your laws are soooo cute. a felony for calling a person by the wrong pronoun. You all must be kidding. kkkkkk. It's embarrassing to have a border country whose leaders are sooooo not intelligent.

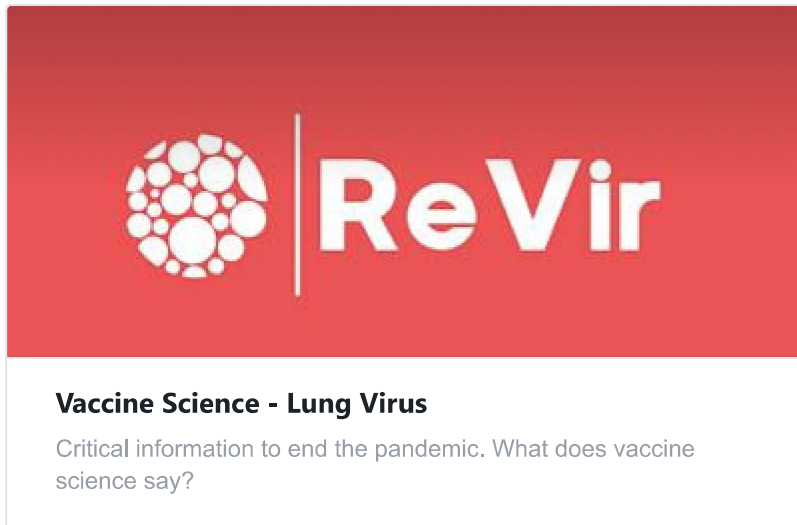

Good luck with saving your, shall I say, "fearless" leader? kkkkkkkkkkkkkk. This information will blow up soon and everyone will know it. Generally, when in a debate, a confrontation, an argument, when. . . . invoking "emergency powers", you want to be on the RIGHT side of science.

LOL. Well, you got it wrong this time. I pity you. Now, you won't only be running away, you'll have to put your TAIL between your skinny legs as you run. The COVID vaccine will be a perfect example of science..... FICTION. If you need a "teleporter" to get your prize fighting antibody into the lung ring, that WOULD then be considered science FICTION?

And I will be sending this information to ALL your political enemies and the TRUCKERS and you might want to pack your bags so you can walk away quickly and not have to run so fast this time? Go ahead, try to FREEZE my account too. lmao. In life, one doesn't always get a chance to make such fun fun (and i meant the two 'fun's) of a leader of an actual real country.

Pity you,

[Vaccine Science - Lung Virus](#)

Joseph Y. Lee, MD

p.s. better you spend your time packing your bags, NOT trying to report me to the California Medical Board, you see I'm PROACTIVE. I sent them all this information months ago and they did NOT deem it to be "misinformation". Rather, one of the board members at the time, agreed to help me. If you aren't a scientist, don't try to take the credit of a scientist OR try to enforce what dumb scientists come up with, and with a damn haughty attitude to boot. Tail between your legs, mister. I mean Minister. LMAO.

pps. to the CCL and Mark Strahl. You DON'T have to agree with all my points. But, I bring enough questions to the table that any reasonable open-minded scientist must conclude that there is ONLY two appropriate responses; 1) the COVID vaccine definitely needs more study before commercial use, definitely BEFORE a MANDATE or 2) the COVID vaccine hypothesis is truly science fiction.
