FDA ADVISORY BOARD
VIA EMAIL AND CERTIFIED MAIL

Dear Dr. Arnold Monto,

I am a University of Michigan Medical School Graduate ('94) and a practicing lasik surgeon in LA. During medical school, Dr. Francis Collins was my genetics professor. I am also deeply disappointed in his lack of response to my concerns.

When you see Dr. Emily Erbelding's response to my concerns, back in September or so of last year, you will be extremely disappointed in her lack of open-mindedness.

THIS IS the fatal flaw with the covid vaccine paradigm. There are only two questions that expose the bizarre nature of this medical mistake. Any layman can see the bizarre nature of the poor logic.

1. Do you believe the COVID vaccine primarily "works" because of a neutralizing antibody in the lung alveolus that binds Covid viruses, preventing them from infecting lung alveolar cells?
2. Then, how did this very large 150,000 Dalton COVID IgG antibody cross the blood lung barrier (aka the alveolar wall) into the lung alveolus? This lung alveolar wall can impede the net movement of WATER molecules that are only 18 Daltons in weight, from filling our lung alveoli.

Why would a molecule (the COVID IgG antibody) which is 8000 times larger than a water molecule be able to cross this alveolar wall? There is not a single peer reviewed paper on earth that describes an active transport mechanism that can move IgG antibodies from the capillary (we all agree that IgG antibodies are created in the blood/lymph), across the lung alveolar wall (also known as the blood lung barrier and which can impede the net influx of tiny water molecules), into the lung alveolar sac, where the infections are taking place?

Yes, you've heard of the "emperor's new clothes"? This is the modern version of that, except a million times worse. It's incredible. The gargantuan size of the mistake. As an aside, the blood BRAIN barrier typically has a size limit for molecules that can passively diffuse through it of no greater than 500 Daltons. But, do you really believe that the blood LUNG barrier must allow a 150,000 Dalton IgG molecule to simply diffuse across it? I've reported it to the NIH, the CDC, the FDA. They all seem to want to bury the story.

Yes it's crazy. But the COVID vaccine is the "misinformation". In medicine, did we not all take the oath to "do no harm"? Not stopping a COVID vaccine that DOES NOT have a valid hypothesis and potentially a MUCH shorter effect than previously thought, means you are harming the American public. This is the time to do the right thing.

Very disappointed in the scientific/medical leadership. Dr. Fauci deserves to go to prison.

Joe Lee, MD
