

Australian Water Asset Services

Sustainability policy statement

Australian Water Asset Services was established in 2024 to provide servicing, maintenance and upgrades to the water treatment industry.

Australian Water Asset Services acknowledges that its activities have an impact on the environment and staff have a responsibility to play their part in reducing our environmental impact.

We will work toward this by:

- Minimising carbon emissions and conserving natural resources for future generations through improvements in energy efficiency.
- Developing effective waste management and recycling practices.
- Increasing awareness of environmental responsibility among staff and customers.
- Having an environmental management system that ensures Australian Water Asset Services complies with environmental legislation.
- Promoting and encouraging sustainable forms of travel, transport and communication by staff.
- Maintain sites and equipment in an environmentally sensitive way, having regard to the protection of natural habitats and local wildlife.
- Considering environmental factors in new projects and upgrades.
- Striving to continually improve Australian Water Asset Services's performance.

The policy review date is July 2024.

Joshua Watson
Managing Director
