BHP Model 7700 RD Wet/Dry 4000 ft. Film Printer

- **Faster, more reliable film drying.** Newly improved air knives and an advanced film drying system allow increased speed, productivity and quality of your finished prints.
- **New Wet Picture Head.** Designed to significantly reduce or eliminate bubbles, a major cause of lost productivity and re-prints. In addition, maintenance and safety improvements have been incorporated into the new design.
- **New Film Path.** Especially important for archival and delicate film. The threading path has been re-designed to reduce acute wrap angles.

New air knives and advanced film drying system ensure reliable drying at much higher speeds than previously possible.

BHP Model 7700 ED Dry 4000 ft. Film Printer

- **Faster.** The new design achieves a 25% increase in maximum speed to 1200 ft/min (21,500 m/hour).

Newly designed wet head significantly reduces or eliminates "bubbles".

New Features Common to Both 7700 RD and ED Models

- **Now standard** – Printernet III Computer Printer Control System. 3 ways to download data...floppy disc, paper tape, downloads files directly from a server or PC.
- **Reduced Maintenance Costs** – thanks to several accessibility improvements, including a diagnostic port, tension calibration from the front of the machine, internal electrical outlets and lighting, and easier rear access.

NEW! Printernet III Computer Printer Control System allows scene data files from film color grading equipment to be downloaded directly from a server or PC.
