

PXG 0311 XF GEN6 HYBRIDS

Designed to be easy to hit and provide maximum forgiveness, PXG 0311 XF GEN6 Hybrids feature PXG's most advanced technology and present a confidence-inspiring, clean aesthetic. Railed Sole Geometry and a large, squared face help deliver enhanced turf interaction, increased forgiveness, higher trajectory performance, and greater distance.

FEATURES

High-Strength Carbon Fiber Crown
Supported Weight Structure
Railed Sole Geometry
2-Weight Precision Weighting Technology
High-Speed Squared Face
Robotic Polishing

BENEFITS

Unbelievable Forgiveness
Fast Ball Speeds
Optimal High Trajectory
Excellent Dispersion
Outstanding Distance
Unmatched Sound and Feel

PXG 0311 XF GEN6 HYBRIDS SPECIFICATIONS

CLUB	LOFT	LIE	LENGTH	HEAD MASS
3	19°	58.5°	40.25"	235g
4	22°	59°	39.75"	240g
5	25°	59.5°	39.25"	245g
6	28°	60°	38.75"	250g
7	31°	60.5°	38.25"	255g

*Club number represents the intended replacement iron.

PRECISION WEIGHTING TECHNOLOGY

PXG 0311 XF GEN6 Hybrids present one light (2.5g) and one heavy (15g) sole weights that are interchangeable to support preferred spin and bias settings.

Weights are available in 2.5, 5, 7.5, 10, 12.5, 15, 17.5, and 20 gram options and can also be used to adjust the overall head mass.

(Dot scheme identifies the weight.)

WEIGHT IN BACK/TOE

- Fade Bias
- Pulls CG Toe Side
- Anti-Hook Performance
- Added Forgiveness

WEIGHT IN BACK/HEEL

- Draw Bias
- Pulls CG Heel Side
- Easier to Square the Face
- Added Forgiveness

SUPPORTED WEIGHT STRUCTURE

Through rigorous modal analysis testing, PXG designed an innovative supported weight structure that delivers unbelievable sound and feel. The Precision Weighting Technology is shifted to the extreme perimeter of the clubhead, anchoring the weight ports to the outer wall. That positioning creates a stiff, stable structure and a sophisticated internal geometry that generates high frequency vibrations. Using modal analysis to study vibration, PXG determined the ideal frequency range that produces a more optimal feel and sound at impact.

HIGH-STRENGTH CARBON FIBER CROWN

The PXG 0311 GEN6 Hybrid crown is made from high-grade carbon fiber. This lightweight material saves mass in the crown, allowing it to be redistributed low and to the perimeter of the clubhead for optimal CG and a higher MOI.

ROBOTIC POLISHING

Robotic polishing is a high-precision process that ensures the face thickness and the face curvature (the bulge and roll radii) are manufactured to design specs that maximize performance and impart corrective spin for ideal ball flight on off-center shots.

HIGH-SPEED, SQUARE FACE

PXG 0311 GEN6 Hybrids present a high-strength steel face design that is optimized for extremely fast ball speed performance. The squared face shifts the perimeter skirt more vertical, increasing the surface area to significantly boost forgiveness..

HEAD DESIGN

Made from a high-strength AM355 steel, the clubhead features a larger head profile, squared face design, and Railed Sole Geometry that extends down to help create a low friction interaction with the turf. The innovative shape also helps position the center-of-gravity lower for high launch and optimal spin to deliver maximum forgiveness.
