SUPERVISION, HEALTH, AND SAFETY

Dear Parents and Guardians,

VES has designed all its programs with the utmost attention to health and safety and has completed and applied a risk assessment and with existing controls to all its programs. In so doing, our program size for the summer is small and with a ratio of 1:7, respectively adult to youth. The accommodation is clean, spacious, secure, and set in a healthy environment.

Each of the sites and activities included in this summer program is known and understood by VES's Founder and Business Strategist. We have an understanding of the environment, people, and how the two interact. Further, we will implement emergency measures, health requirements, and policies—all in compliance with local rules and regulations.

Our application package will seek to know any medical condition that could create a medical emergency or need an immediate response so that our competent staff will be in a position to respond appropriately when your child is in our care. To ensure the highest level of attention to our participants' health and safety, VES has secured the services of a person who is first—aid certified, and in addition to available and reputable health facilities, we have secured an on—call doctor.

VES's staff members are learned and knowledgeable people with a reputable status and discipline, several of whom have had many years of successful experiences with children and youth and without incidents. Rather, the commendations about our staff are positively glowing. Your child will be looked after like our very own children. Our most important goal is to keep your child safe and to ensure a positive and indelible experience.

Sincerely,

Marcia Moncrieffe, Esq.
VES Business Strategist and Certified Life Coach
