

## **Ducati Multistrada Sat Nav Mount 2015+**

This mount is designed to fit all Multistrada from 2015 onwards. This includes the 1200DVT, 950, 1200Enduro models & 1260

### **Fitting instructions:**

1. You will need to remove the screen from the motorcycle
2. While the screen is off it's a good time to give everything a clean and lube your screen adjustment mechanism
3. Remove the sliding latch from the assembly. It is only on finger tight for transport.
4. Slide the mount onto the plastic spigot of the screen mechanism.
5. Check to see if it is pushed down snug. There are a couple of extra bits of foam tape in the kit in case you feel there needs to be more support for the bracket.
6. With the mount in place refit the sliding latch.
7. It will not lay flat by design. Fit the screw from the top
8. TIP... to fit the nut, place a piece of sticky tape on one side of an open ended spanner. Place the nut in the end of the open ended spanner. The nut should not fall out and allow you to get it started.
9. Simply tighten the screw and as it pulls the latch flat it will pull the whole mount down tight.
10. The holes in the cradle mounting plate are large enough to accept 5mm screws.
11. Use supplied cable ties to secure satnav wiring.

**See reference images below for how it should look installed.**
