PM8500 Sensor
Connecting the rod electrode

- a** Connect the clamp of the ground cable (A) with the exposed rebar
- b** Connect the ground cable (B) to the interface box using B1 plug
- c** Connect the rod cable (C) to the interface box using C1 plug and to the electrode using C2 plug

PM8500 Sensor

Connecting the one wheel electrode

- a Connect the clamp of the ground cable (A) with the exposed rebar
- b Connect the ground cable (B) to the sensor using B1 plug
- c Connect the potential cable (C) and the encoder cable (D) to the sensor using C1 and D1 plugs

PM8500 Sensor
Connecting the four wheel electrode

- a Connect the clamp of the ground cable (A) with the exposed rebar
- b Connect the ground cable (B) to the sensor using B1 plug
- c Connect the potential cable (C) and the encoder cable (D) to the sensor using C1 and D1 plugs

PM8500 Rod Electrode

Filling the rod electrode with Copper Sulphate

2

- a Remove the cap with the wooden plug and soak it into water for about an hour to allow the wood to saturate and swell.
- b Prepare the saturated solution by mixing **40 units by weight of copper sulphate with 100 units by weight of distilled water**. Add an additional teaspoon of copper sulphate crystals into the electrode.
- c The electrode should be filled as completely as possible with a **minimum of air** in the compartment.

PM8500 Wheel Electrodes

Filling the wheel electrodes with Copper Sulphate

- a** The wooden plug (A) is not intended to be removed. Immerse the wheel in water for an hour to allow the water to soak into the plug. Only the wheels should be immersed, therefore, please remove them from the legs before doing it.
- b** The felt hoops (B) and the felt hoop connector must be saturated before measuring. In normal use (with water and copper solution), the thin felt is on the wooden spigot side (A).
- c** Prepare the saturated solution by mixing 40 units by weight of copper sulphate with 100 units by weight of distilled water. Fill in the copper tank removing the plug (C). Add an additional teaspoon of copper sulphate crystals into the electrode. The electrode should be filled as completely as possible with a minimum of air in the compartment.
- d** Fill in the water container with water. To do so you need to remove the water plug (D).
- e** The water should be dripping out slowly from the water tank throughout the 1mm nozzle (E). The bike valve on the opposite side should provide a high pressure; if water is dripping out too fast, please apply some pressure blowing the bike valve with your mouth.

PM8500 Universal holder

How to mount the interface box on the harness

③

- a Use the inner clamp (A) of the universal holder to attach it to the iPad harness or your belt

B

C

- a Connect the round support (B) of the universal holder to the telescopic rod and attach it using the rubber band (C).
- b Recommendation: Use the holder rubber band as strain relief for the cable-reel-cable.

PM8500 Telescopic rod

How to mount the telescopic rod on the one wheel and four wheel electrode

5

- a Connect the telescopic rod with the one wheel / four-wheel connector (A)
- b Move the indented wheel clockwise to join both parts

PM8500 Accessory: Ball Joint for one Wheel electrode

How to mount the ball joint on the telescopic rod and on the one wheel electrode

6

- a Connect the telescopic rod with the ball joint accessory by rotating the indented ring clockwise (A)
- b Connect the one-wheel electrode with the ball joint accessory by rotating the indented ring clockwise (B)
- c Use the ball adjuster (C) to move freely your one-wheel electrode position in a range of 360°. Please be aware of the position of the cables and the sensor unit.

PM8500 Rod Electrode Foams

How to replace the foam of the rod electrode

- a Remove the foam (A) from the rod electrode if it is broken or overused
- b Stick the new foam (B) into the same position. Please use only a small amount of glue

PM8500 Four wheel variable distance

How to change the distance between the wheels (limited from 150mm to 250mm)

- a Unscrew the collars (A) – wheels 2, 3 and 4. Wheel 1 is always fixed
- b Slide the wheel legs (B) to the desired position
- c For the 150mm version, mount the wheels as described in the position marks (C) (all wheels are facing to the fixed wheel)
- d For the 250mm version, mount the wheels as described in the position marks (D) (the right two wheels must be turned to face the right side)
- e Screw the collars (A) to fix the wheels at the desired position
- f Any other distance from 150mm to 250mm can be selected
