CERTIFIED EXPERTS, PROVEN CAPABILITIES

Expertise That Delivers Results:

Willis Security brings deep operational expertise from the front lines of cybersecurity. We integrate best practices, trusted frameworks,and automation to secure modern hybrid and cloud environments.

✓ Vulnerability Management:

- Continuous vulnerability scanning across on-prem, cloud, and hybrid systems
- Risk-based prioritization aligned with industry standards and threat intelligence models
- Security posture reviews for public cloud environments

✓ Threat Detection & Incident Response:

- Advanced endpoint and network threat detection capabilities
- Email security solutions with phishing prevention and response automation
- Proactive threat hunting and correlation of indicators of compromise (IOCs)

✓ Identity & Access Management:

- Identity and privilege access lifecycle management
- Implementation of Zero Trust principles, RBAC, and secure SSO configurations
- Directory services hardening and privileged access provisioning

✓ Red Teaming & Penetration Testing:

- Internal and external penetration testing across network, cloud, and applications
- Secure code review and DevSecOps pipeline integration
- Application security testing across web, mobile, and cloud platforms

✓ Security Engineering & Automation:

- Custom scripting and automation for alerting, response, and tool orchestration
- Scalable deployments for security solutions and monitoring platforms
- Development of policies, secure configurations, and system hardening practices

✓ Compliance & Audit Support:

- Regulatory and framework alignment (HIPAA, PCI DSS, NIST, etc)
- Governance, risk, and compliance (GRC) program implementation
- Internal audit support, vendor assessments, and evidence collection
