GASWorkS™ 10.2   *Update Notes*

The following briefly describes the changes incorporated in the associated update. Each subsequent update contains all of the changes included in the previous revisions.

Version	Revision	Date	Description
10.2	074.2	July 31, 2023	Various bug fixes and enhancements, including the inclusion of: Added the Windows Calculator to the *Utilities* menu. Useful when doing some quick math. Added the "Clear" command, which does not prompt for resetting the intersection flags. Enter "CLEAR" on the GDI Command Line to use. Added a "Trace Upstream To Regulators" option to the *Trace* command. Similar to "Trace Upstream," it stops at the first regulator encountered. Revised start-up program to allow suppression of the automatic update check. This was a request by several IT folks (Users may not be happy with it in the long run.) Resolved issue of streaming Bing Maps (at least until they change something again).
10.2	070.2	March 29, 2023	Resolved issue calculating composite pipe size in the segment calculator (UKDM). Revised to handle new B3PE server configuration. Various maintenance.
10.2	069.2	February 14, 2023	Resolved issue when selecting a regulator for editing. Various maintenance.

Version	Revision	Date	Description
10.2	061.2	June 15, 2022	Various bug fixes and enhancements, including the inclusion of:
			A separate dimensional unit value for prompted length values. Helpful when coordinate units are longitude and latitude or length units are large (miles or kilometres).
			Resolved (hopefully) occasional errors when entering and editing regulator and compressor pipe elements.
			Allow multiple instances of GW to be opened. Helpful when comparing results between models.
			Added an "Ignore Error Check" option to indicate that nodes, pipes, or customers will be excluded from the Data Check routine.
			Added a "Select Supply Node" command to the Customer Data Panel *Actions* list. Helpful for identifying which node to assign the customer's load to.
			Various maintenance.
10.2	058.2	March 02, 2022	Various bug fixes and enhancements, including the inclusion of velocity values in the dxf export options and the addition of the "Favorites" icon on the GDI screen.
10.2	056.2	January 10, 2022	Initial release.
