

A telebelt is a truck-mounted telescopic belt conveyor ideal for a variety of applications including foundations, decks, backfilling, mat pours, slabs, and footings. It can easily place high volumes of materials such as, concrete, gravel, backfill, dirt, mulch, sand, rock, and lots of other materials in hard-to-reach places. It handles concrete from 2” to 8” slumps and places materials ranging from sand to 3” rock.

Choosing a Telebelt for your project ensures a cleaner and more efficient job site, and saves times and labor. It allows you to complete more jobs with less manpower as well as eliminating equipment that requires multiple trips.

– Telebelt 50

Telebelt 110 –

**Telebelt 50**

- 50 ft (15.24m) of horizontal reach
- Max. rated output up to 80 yd3/hr. (61m3/hr.)
- Sets up and operates under low 14 ft (4.3m) heights
- 360° Cont. Rotation of Feeder and Main

**Telebelt 110**

- 106’ 1” (32.34m) of horizontal reach
- Max. rated output up to 360 yd3/hr. (275m3/hr.)
- Sets up and operates in heights as low as 15’9” (4.80m)
- 360° Cont. Rotation of Feeder and Main

**Our Mission**

We provide quality concrete pumping and exceptional service to all our customers by professional operators. Each job is performed using well-maintained equipment to deliver satisfying results in a safe environment. We value the relationships we create with our customers, suppliers, and employees.

**Our Vision**

To continue to be recognized as the preferred concrete pumping company by new and existing clients and to be the employer of choice by creating an environment of respect and teamwork.

# Our Equipment

– Line Pump JMP 60

32 Meter 5 Section –

– 33 Meter Z Fold

38 Meter 5 Section Double Z –

– 38 Meter R Fold

41 Meter Roll Fold –

– Line Dragon

## Line Pump JMP 60

The line pump is best suited for projects with limited space. This includes residential and commercial projects with overhead obstructions and navigating around existing structures, stairwells, patios, and walls.

## 38 Meter R Fold

The 38 meter pump features compact outriggers. It makes an ideal choice for compact jobsites. The 24 feet unfolding height works well with interior pours.

## 32 Meter 5 Section

With an unfolding height of 19 feet, the 32-5 meter pump is a great option for all projects where there is low overhead clearance, including power lines.

## 41 Meter Roll Fold

The versatile 41 meter pump is suited for nearly all residential and commercial projects. The versatile boom configurations feature 2 hyper extending sections.

## 33 Meter Z Fold

The 33 meter pump features compact outriggers. It makes an ideal choice for compact jobsites. The 24 feet unfolding height works well with interior pours.

## 47 Meter LRZ Fold

This pump thrives on large commercial projects. The 47 Meter can complete large slabs, walls and pours where vertical reach is needed with an impressive vertical reach of 152 feet.

## 38 Meter 5 Section Double Z

The 5-section double Z has a 24 feet unfolding height. This allows for interior pours while boasting more of a horizontal reach. The 18-cell pump kit allows the pump to handle larger pours with ease.

## Line Dragons

Line Dragons have the ability to easily operate over rebar grids, radiant heat lines, floor decking and other site hazards. They can pull 4" or 5" hose systems and have a 360 degree rotating boom nozzle. The Line Dragon also has 2-wheel and 4-wheel drive crab steering and can place concrete at 6000 sq. ft./hour.
