THERMO-PVC

Key Features:

- **Premium PVC Material:** Resistant to moisture, warping, and fading, ensuring long-term durability.
- **Energy Efficient:** Multi-chambered frames and advanced glass reduce energy costs while keeping your home comfortable year-round.
- **Low Maintenance:** No painting, sanding, or sealing required—just simple cleaning.
- **Noise Reduction:** High-performance glass and frame design offer superior sound insulation.
- **Customizable Styles & Sizes:** Available in various window styles and custom sizes to fit any home.
- **Enhanced Security:** Strong, reinforced frames with secure locking mechanisms for added safety.

Benefits:

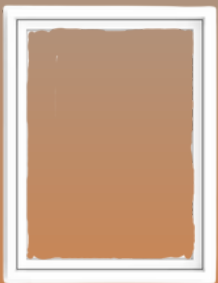

- **Durable & Long-Lasting:** Built to withstand the elements for years of dependable service.
- **Environmentally Friendly:** PVC is recyclable and offers energy-saving benefits.
- **Increases Property Value:** A stylish and functional upgrade to your home or building.

Choose Thermotek for high-quality PVC windows that deliver performance, style, and energy efficiency. Let us help you make your home more comfortable and secure!

THERMOVIEW

A picture window is a non-operable window designed to provide an unobstructed view and allow natural light into a space. Unlike other window types, it does not open and has no moving parts, making it highly energy-efficient with excellent insulation properties. Picture windows are commonly used in combination with operable windows or as standalone architectural features to enhance aesthetics and maximize outdoor visibility.

THERMO SWING

A casement window is a type of window that is attached to its frame by one or more side hinges. It opens outward like a door, typically using a crank handle. Casement windows provide excellent ventilation and a tight seal when closed, making them energy-efficient. They are commonly used in both residential and commercial buildings and are available in single or paired configurations.

THERMOBREEZE

An awning window is a type of window that is hinged at the top and opens outward from the bottom, typically using a crank handle or push-out mechanism. This design allows for ventilation even during light rain, as the glass acts like an awning to deflect water. Awning windows provide good energy efficiency, security, and airflow while maintaining a modern or traditional aesthetic, depending on the frame style.

THERMO SLIDE

A horizontal slider window is a type of sliding window that opens by moving a sash horizontally along a track. It is a popular choice for modern homes and commercial buildings due to its sleek design, ease of use, and space efficiency. Smooth Side-to-Side Operation – The sash glides effortlessly on its wheels for easy opening and closing.

THERMOLIFT

A vertical slider window, also known as a single-hung window, has a smooth up-and-down operation – The sash glides effortlessly on constant force coils for easy opening and closing. It is a classic and versatile window style commonly used in residential homes and commercial buildings.

Vertical slider windows offer a traditional look with modern performance, making them a popular choice for homes, apartments, and offices.

THERMO TILT

A hopper window is a compact, inward-opening window that is hinged at the top and swings open from the bottom. Commonly used in basements, and other space-restricted areas, this design provides efficient ventilation while maintaining security. Hopper windows are also an excellent choice for meeting window egress requirements in limited spaces. Equipped with a secure locking mechanism, they offer both functionality and safety.

THERMOBAY

A bay window is a type of window that projects outward from the exterior wall of a building, creating a small alcove or nook inside. It typically consists of three or more windows: a large center window and two smaller side windows that are angled outward. Bay windows offer expansive views, allow more natural light to enter the room, and create the illusion of a larger, more open space. They are commonly used in living rooms, dining areas, or bedrooms, adding both functional and aesthetic appeal to the home.

THERMOBow

A bow window is a type of window that extends outward from the wall, forming a smooth, curved shape. It typically consists of four or more individual windows, arranged in a gentle arc, which allows for a wider view and maximizes natural light. Bow windows are often used to create a feeling of space and openness in a room while enhancing the home's exterior aesthetic. They are popular in living rooms, dining areas, and other spaces where you want to add character and increase the amount of light and ventilation.
